CHAPTER 4 – DEVELOPMENT STANDARDS

4.1.2.4. Row Townhomes

Table 4-5 establishes the development standards for row townhomes. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.6.

Table 4-5:Row Townhome Development Standards

	Row Townhomes
Minimum Parcel Size	1 ac
Maximum Site Coverage	N/A
Maximum Building Height	50' (3 stories)
Minimum Front Setback (from Internal Street Right-of-Way)	
Front Living Space	10'
Porch, Courtyard or Balcony	4'
Minimum Side Setback (from Internal Street Right-of-Way)	
Street Side	6'
Minimum Building Separation	
Living Space	8'
Patio Cover, Balcony or Deck	3'
Front to Front (entries) - at open space	20'
Side to Side with entries	20'
Garage Door to Garage Door at Alley	28'

SHEET TITLE
PA12B DUPLEXES

SHEET NO.
A0-1

PA12B - DUPLEXES

Planning Area 12B features 40 Duplex Buildings and 7 single family detached homes. The same building types are also proposed for a small portion of adjacent Planning Area13B, bringing the total number of dwelling units of this product type to 98.

All buildings are 3 stories tall and are designed in three different architectural styles: Spanish, Prairie, and Farmhouse. The duplex buildings are comprised of 3 unique floor plans of increasing floor area (1,578 sq.ft. - 1,790 sq.ft.) and a progression of rooms and features. Each dwelling unit has a private, attached 2-car garage.

All buildings are designed in an "alley-loaded" configuration, meaning vehicles circulate through a drive alley at the rear of the building and park in garages at the rear. This configuration hides automobiles and allows the entire front of the building to be active living spaces. The homes front directly onto city streets or pedestrian paseos, creating a pedestrian-focused neighborhood with charming front facades.

Residents are provided with a variety of private outdoor spaces including a private yard at the front of the dwelling defined by low landscape walls. These yards typically continue around the side of the building providing additional usable space. Private covered decks occur on the second floor of every dwelling unit. They are sufficient size for outdoor furniture and have a direct connection to the kitchen/living/dining areas of the home

In addition to the 3 architectural styles, there are 6 unique color schemes proposed for this neighborhood resulting in visual variety and a diversity of architectural elements. Such elements include the following:

- Concrete tile roofs
- Stucco, siding, and stone veneer walls
- Wood and metal awnings over doors and windows
- Wood corbels brackets
- Metal guard rails
- Variety of roof geometry and massing variation

   1 GALLON: 60%

FENCE AND WALL LEGEND :

3'-0" HIGH COURTYARD SPLIT FACE BLOCK WALL WITH 2" PRECISION CAP. COLOR TO BE NATURAL GREY. SITE SPECIFIC LAYOUT/HEIGHT MAY VARY DEPENDING ON FINAL SITE CONDITIONS. REFER TO SHEET L-9 FOR ELEVATIONS.

NOTE:
FINAL MATERIAL/COLOR SUBJECT TO CHANGE AT THE DISCRETION OF THE MASTER DEVELOPER

SITE ELEMENTS LEGEND:

- G — PATIO/COURTYARD GATE
- CONCRETE PAVING
- ENHANCED PEDESTRIAN PAVING
- AC CONDENSER LOCATION
  SCREEN LOCATIONS SHOWN AS DASHED LINE (GREEN) WHERE ROOM ALLOWS AC CONDENSER UNIT TO BE SCREENED WITH PLANT MATERIAL

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED:
   -10' FROM ANY WATER OR SEWER LINE
   -30' FROM ANY INTERSECTION
   -10' FROM STREET LIGHT
   -10' FROM FIRE HYDRANT OR STREET SIGN
   -10' FROM DRIVEWAY APPROACH
   -MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.
9. ADDITIONAL SCREENING INCLUDING WALLS, FENCING OR OTHER MEANS MAY BE REQUIRED DUE TO FINAL PLACEMENT OF ANY AC CONDENSERS.
10. ADDITIONAL RETAINING/CURBS SHALL BE REQUIRED FOR ANY SLOPES GREATER THAN 3:1 ADJOINING OFF-SITE AREAS OR INTERIOR AREAS WHERE EROSION CAN BE A CONCERN.

CHAPTER 4 – DEVELOPMENT STANDARDS

4.1.2.2. Zero-Lot Line and Rear Loaded SFD Residential

Table 4-3 establishes the development standards for front loaded zero-lot line and rear loaded SFD residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.4. Note: Zero-Lot Line Homes may be front or rear loaded. In the event that a rear-loaded Zero-Lot Line Home is proposed, the Rear-Loaded Homes standards shall apply (with a maintenance easement for the side yard).

Table 4-3: Zero-Lot & Rear Loaded SFD Residential Development Standards

	Zero-Lot Line Homes	Rear Loaded Homes
Minimum Lot Size	2,500 sq. ft.	2,000 sq. ft.
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback (from Property Line)		
Living Space	6'	6'
Porch, Courtyard or Balcony	4'	4'
Front Entry Garage	18' (full driveway/2'- 5')	N/A
Minimum Side Setback (from Property Line)		
Interior Side (one side/between buildings)	3'/6'	3'/6'
Internal Street Right-of-Way Side	6'	6'
Minimum Rear Setback (from Property Line)		
Living Space	5'	5'
Patio Cover, Balcony or Deck	3'	3'
Rear Entry Garage Setback (from Access Drive)	N/A	3' to 8' or 18' min.

CHAPTER 4 – DEVELOPMENT STANDARDS

SECTION B-B SCALE: 1" = 10'-0"

LEGEND

- STANDARD AERIAL TRUCK LADDER ACCESS TO BUILDING (BETWEEN 10' - 30' FROM ACCESS ROAD)
- PERFORMANCE BASED AERIAL TRUCK LADDER ACCESS TO BUILDING (BETWEEN 30' - 40' FROM ACCESS ROAD)
- INDICATES LOCATIONS ALONG BUILDING WHERE ROOF ACCESS CAN BE ACHIEVED BY GROUND LADDERS SINCE ROOF EAVES ARE LESS THAN 30' FROM THE FINISHED SURFACE BELOW
- INDICATES PROPOSED BUILDING
- INDICATES EXTENT OF THE BUILDING FACE WHERE PERFORMANCE BASED TRUCK LADDERING IS POSSIBLE FROM THE INTERIOR STREETS
- PROPOSED SECONDARY EMERGENCY VEHICLE ACCESS ROADWAY FOR PER CITY OF EASTVALE STANDARD

FIRE APPARATUS PATH OF TRAVEL PER EASTVALE FIRE AND RESCUE REQUIREMENTS.

FIRE APPARATUS DIMENSIONS PER EASTVALE FIRE AND RESCUE REQUIREMENTS.

NOTE:
THIS LADDER ACCESS EXHIBIT HAS BEEN PROVIDED TO DEMONSTRATE PERFORMANCE BASED AERIAL TRUCK LADDERING TO THE ROOF LEVELS UTILIZING 26-FOOT-WIDE FIRE ACCESS ROADWAYS THAT WERE APPROVED AS PART OF THE COMMUNITY SPECIFIC PLAN. ADDITIONALLY, GROUND LADDERING TO THE ROOF LEVELS WHERE EAVES ARE PROPOSED TO BE LESS THAN 30-FEET, MEASURED VERTICALLY FROM THE FINISHED GRADE BELOW, HAS BEEN DEMONSTRATED FOR THE PROPOSED ELEVATION TYPES WITHIN THIS PHASE. ANY CONFLICTS WITH FIRE DEPARTMENT TURNING RADII OUTSIDE OF THE ROADWAYS ARE NOT INTENDED AS PART OF THIS REVIEW AND SHALL BE ADDRESSED AS PART OF THE FINAL SITE PLAN AND FIRE MASTER PLAN WITH ALL ROADWAYS MEETING THE FIRE DEPARTMENT TURNING RADII.

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED
   10' FROM ANY WATER OR SEWER LINE
   30' FROM ANY INTERSECTION
   10' FROM STREET LIGHT
   10' FROM FIRE HYDRANT OR STREET SIGN
   10' FROM DRIVEWAY APPROACH
   MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.

- ENHANCED PEDESTRIAN PAVING
- PROPOSED MAILBOX LOCATION (ACTUAL MAILBOX LOCATIONS MAY CHANGE UPON USPS REVIEW)
- AC CONDENSER LOCATION SCREEN LOCATIONS SHOWN AS DASHED LINE (GREEN) WHERE ROOM ALLOWS AC CONDENSER UNIT TO BE SCREENED WITH PLANT MATERIAL

TREE SHADING LEGEND:

- PARKING AREA SHADED BY TREES
- PARKING AREA

SHADED SUMMARY:

TOTAL PARKING AREA: 7,302 SF.
(EXCLUDES DRIVE AISLES AND COVERED PARKING SPACES)

PARKING AREA SHADED BY TREES
REQUIRED* 2,191 SF (30%)
PROVIDED 2,550 SF (34.92%)

OVERALL COVERAGE PROVIDED: 34.92%

* REQUIRED PERCENTAGE BASED ON PARKING AREAS OF 5-24 SPACES

** TREES SHOWN AT 15 YEARS MATURITY.
PER RIVERSIDE COUNTY ORDINANCE 348, SECTION 1812

LANDSCAPE COVERAGE SUMMARY:

OVERALL LANDSCAPE: 26,630 SQ. FT.

TOTAL DEVELOPED AREA - PA 12C: 4.52 ACRES (190,276 SF)

PERCENTAGE OF LANDSCAPE AREA: ± 13.53%

OPEN SPACE / RECREATION AREAS: 5,770 SQ. FT.

- SHRUBS - REFER TO SHEET L-2 FOR FULL PLANTING LEGEND AND NOTES
- NATURAL TURF AREA
  TURF TO BE WARM SEASON GRASS

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED:
   - 10' FROM ANY WATER OR SEWER LINE
   - 30' FROM ANY INTERSECTION
   - 10' FROM STREET LIGHT
   - 10' FROM FIRE HYDRANT OR STREET SIGN
   - 10' FROM DRIVEWAY APPROACH
   - MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.
9. ADDITIONAL SCREENING INCLUDING WALLS, FENCING OR OTHER MEANS MAY BE REQUIRED DUE TO FINAL PLACEMENT OF ANY AC CONDENSERS.
10. ADDITIONAL RETAINING/CURBS SHALL BE REQUIRED FOR ANY SLOPES GREATER THAN 3:1 ADJOINING OFF-SITE AREAS OR INTERIOR AREAS WHERE EROSION CAN BE A CONCERN.

4.1.2.2. Zero-Lot Line and Rear Loaded SFD Residential

Table 4-3 establishes the development standards for front loaded zero-lot line and rear loaded SFD residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.4. Note: Zero-Lot Line Homes may be front or rear loaded. In the event that a rear-loaded Zero-Lot Line Home is proposed, the Rear-Loaded Homes standards shall apply (with a maintenance easement for the side yard).

Table 4-3: Zero-Lot & Rear Loaded SFD Residential Development Standards

	Zero-Lot Line Homes	Rear Loaded Homes
Minimum Lot Size	2,500 sq. ft.	2,000 sq. ft.
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback (from Property Line)		
Living Space	6'	6'
Porch, Courtyard or Balcony	4'	4'
Front Entry Garage	18' (full driveway/2'- 5')	N/A
Minimum Side Setback (from Property Line)		
Interior Side (one side/between buildings)	3'/6'	3'/6'
Internal Street Right-of-Way Side	6'	6'
Minimum Rear Setback (from Property Line)		
Living Space	5'	5'
Patio Cover, Balcony or Deck	3'	3'
Rear Entry Garage Setback (from Access Drive)	N/A	3' to 8' or 18' min.

Figure 4.4 Front Loaded Zero-Lot & Rear Loaded SFD Residential Setback Diagrams

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED
   10' FROM ANY WATER OR SEWER LINE
   30' FROM ANY INTERSECTION
   10' FROM STREET LIGHT
   10' FROM FIRE HYDRANT OR STREET SIGN
   10' FROM DRIVEWAY APPROACH
   MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.

TREE SHADING LEGEND:

- PARKING AREA SHADED BY TREES
- PARKING AREA

SHADED SUMMARY:

TOTAL PARKING AREA: 5,205 SF.
(EXCLUDES DRIVE AISLES AND COVERED PARKING SPACES)

PARKING AREA SHADED BY TREES	REQUIRED*	PROVIDED
	1,562 SF (30%)	3,851 SF (55.93%)

OVERALL COVERAGE PROVIDED: 73.99%

* REQUIRED PERCENTAGE BASED ON PARKING AREAS OF 5-24 SPACES

** TREES SHOWN AT 15 YEARS MATURITY.
PER RIVERSIDE COUNTY ORDINANCE 348, SECTION 1812

LANDSCAPE COVERAGE SUMMARY:

OVERALL LANDSCAPE: 36,721 SQ. FT.

TOTAL DEVELOPED AREA - PA 13A: 5.67 ACRES (247,162 SF)

PERCENTAGE OF LANDSCAPE AREA: ± 14.86%

OPEN SPACE / RECREATION AREAS: 14,400 SQ. FT.

- SHRUBS - REFER TO SHEET L-2 FOR FULL PLANTING LEGEND AND NOTES
- NATURAL TURF AREA
  TURF TO BE WARM SEASON GRASS

NOTE:

THIS PLANNING AREA HAS AC CONDENSERS LOCATED ON PRIVATE BACKYARDS NOT VISIBLE FROM STREET/ALLEYS.

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED:
   - -10' FROM ANY WATER OR SEWER LINE
   - -30' FROM ANY INTERSECTION
   - -10' FROM STREET LIGHT
   - -10' FROM FIRE HYDRANT OR STREET SIGN
   - -10' FROM DRIVEWAY APPROACH
   - -MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.
9. ADDITIONAL SCREENING INCLUDING WALLS, FENCING OR OTHER MEANS MAY BE REQUIRED DUE TO FINAL PLACEMENT OF ANY AC CONDENSERS.
10. ADDITIONAL RETAINING/CURBS SHALL BE REQUIRED FOR ANY SLOPES GREATER THAN 3:1 ADJOINING OFF-SITE AREAS OR INTERIOR AREAS WHERE EROSION CAN BE A CONCERN.

PLOTTED BY: Brandon Wightman DATE: Apr. 01, 2026 02:01:12 PM FILE: F:\0736\Planning\SA_TTM_38596\Exh_MDP\TTM_38596_13B-MDP.dwg

4.1.2.2. Zero-Lot Line and Rear Loaded SFD Residential

Table 4-3 establishes the development standards for front loaded zero-lot line and rear loaded SFD residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.4. Note: Zero-Lot Line Homes may be front or rear loaded. In the event that a rear-loaded Zero-Lot Line Home is proposed, the Rear-Loaded Homes standards shall apply (with a maintenance easement for the side yard).

Table 4-3: Zero-Lot & Rear Loaded SFD Residential Development Standards

	Zero-Lot Line Homes	Rear Loaded Homes
Minimum Lot Size	2,500 sq. ft.	2,000 sq. ft.
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback (from Property Line)		
Living Space	6'	6'
Porch, Courtyard or Balcony	4'	4'
Front Entry Garage	18' (full driveway/2'- 5')	N/A
Minimum Side Setback (from Property Line)		
Interior Side (one side/between buildings)	3'/6'	3'/6'
Internal Street Right-of-Way Side	6'	6'
Minimum Rear Setback (from Property Line)		
Living Space	5'	5'
Patio Cover, Balcony or Deck	3'	3'
Rear Entry Garage Setback (from Access Drive)	N/A	3' to 8' or 18' min.

PA13B & 13C - SINGLE FAMILY RESIDENCES

Planning Area 13B and 13C contain the centralized Model Complex with Sales Office and model homes for adjacent Planning Areas. As a result, PA13B and 13C feature a diverse range of product types. However, the predominant product type for these parcels is Single Family Detached homes. 52 such homes are proposed between the 2 planning areas.

All residences are 2-stories tall and are designed in three different architectural styles: Early California, Italian, Farmhouse. 3 Unique floor plans are proposed with increasing floor areas (2,000 sq.ft. - 2,214 sq.ft.) and a progression of rooms and features. Each dwelling unit has a private, attached 2-car garage.

All residences are designed in an “alley-loaded” configuration, meaning vehicles circulate through a drive alley at the rear of the property and park in garages at the rear of the home. This configuration hides automobiles in the rear and allows the entire front of the home to be active living spaces. The homes front directly onto city streets or pedestrian paseos, creating a pedestrian-focused neighborhood with charming front facades.

The residences also feature reciprocal-use side yards, meaning one residence may enjoy the entire yard between houses on one side of the house only, allowing the adjacent neighbor to enjoy the entire yard on the opposite side. This configuration provides every home with a meaningful, usable side yard instead of the narrow and unusable side yards typically of most single family residences.

In addition to the 3 architectural styles, there are 6 unique color schemes proposed for this neighborhood resulting in visual variety and a diversity of architectural elements. Such elements include the following:

- Concrete tile roofs
- Stucco and siding walls
- Window shutters
- Decorative trims
- Wood post & beam porches
- Variety of roof geometry and massing variation

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED
   10' FROM ANY WATER OR SEWER LINE
   30' FROM ANY INTERSECTION
   10' FROM STREET LIGHT
   10' FROM FIRE HYDRANT OR STREET SIGN
   10' FROM DRIVEWAY APPROACH
   MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.

- AC CONDENSER LOCATION SCREEN LOCATIONS SHOWN AS DASHED LINE (GREEN) WHERE ROOM ALLOWS AC CONDENSER UNIT TO BE SCREENED WITH PLANT MATERIAL

TREE SHADING LEGEND:

- PARKING AREA SHADED BY TREES
- PARKING AREA

SHADED SUMMARY:

TOTAL PARKING AREA: 4,212 SF.
(EXCLUDES DRIVE AISLES AND COVERED PARKING SPACES)

PARKING AREA SHADED BY TREES
REQUIRED* 1,264 SF(30%) PROVIDED 1,270 SF (30.15%)

OVERALL COVERAGE PROVIDED: 30.15%

* REQUIRED PERCENTAGE BASED ON PARKING AREAS OF 5-24 SPACES

** TREES SHOWN AT 15 YEARS MATURITY.
PER RIVERSIDE COUNTY ORDINANCE 348, SECTION 1812

LANDSCAPE COVERAGE SUMMARY:

OVERALL LANDSCAPE: 34,625 SQ. FT.

TOTAL DEVELOPED AREA - PA 13B: 2.97 ACRES (129,285 SF)

PERCENTAGE OF LANDSCAPE AREA: ±26.78%

OPEN SPACE / RECREATION AREAS: 12,760 SF

- SHRUBS - REFER TO SHEET L-2 FOR FULL PLANTING LEGEND AND NOTES
- NATURAL TURF AREA TURF TO BE WARM SEASON GRASS

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED:
   - -10' FROM ANY WATER OR SEWER LINE
   - -30' FROM ANY INTERSECTION
   - -10' FROM STREET LIGHT
   - -10' FROM FIRE HYDRANT OR STREET SIGN
   - -10' FROM DRIVEWAY APPROACH
   - -MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.
9. ADDITIONAL SCREENING INCLUDING WALLS, FENCING OR OTHER MEANS MAY BE REQUIRED DUE TO FINAL PLACEMENT OF ANY AC CONDENSERS.
10. ADDITIONAL RETAINING/CURBS SHALL BE REQUIRED FOR ANY SLOPES GREATER THAN 3:1 ADJOINING OFF-SITE AREAS OR INTERIOR AREAS WHERE EROSION CAN BE A CONCERN.

4.1.2.2. Zero-Lot Line and Rear Loaded SFD Residential

Table 4-3 establishes the development standards for front loaded zero-lot line and rear loaded SFD residential development. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.4. Note: Zero-Lot Line Homes may be front or rear loaded. In the event that a rear-loaded Zero-Lot Line Home is proposed, the Rear-Loaded Homes standards shall apply (with a maintenance easement for the side yard).

Table 4-3: Zero-Lot & Rear Loaded SFD Residential Development Standards

	Zero-Lot Line Homes	Rear Loaded Homes
Minimum Lot Size	2,500 sq. ft.	2,000 sq. ft.
Maximum Building Height	50' (3 stories)	50' (3 stories)
Maximum Building Coverage	70%	70%
Minimum Front Setback (from Property Line)		
Living Space	6'	6'
Porch, Courtyard or Balcony	4'	4'
Front Entry Garage	18' (full driveway/2 - 5')	N/A
Minimum Side Setback (from Property Line)		
Interior Side (one side/between buildings)	3'/6'	3'/6'
Internal Street Right-of-Way Side	6'	6'
Minimum Rear Setback (from Property Line)		
Living Space	5'	5'
Patio Cover, Balcony or Deck	3'	3'
Rear Entry Garage Setback (from Access Drive)	N/A	3' to 8' or 18' min.

Figure 4.4 Front Loaded Zero-Lot & Rear Loaded SFD Residential Setback Diagrams

4.1.2.4. Row Townhomes

Table 4-5 establishes the development standards for row townhomes. A conceptual plotting example illustrating the setback requirements is shown in Figure 4.6.

Table 4-5: Row Townhome Development Standards

	Row Townhomes
Minimum Parcel Size	1 ac
Maximum Site Coverage	N/A
Maximum Building Height	50' (3 stories)
Minimum Front Setback (from Internal Street Right-of-Way)	
Front Living Space	10'
Porch, Courtyard or Balcony	4'
Minimum Side Setback (from Internal Street Right-of-Way)	
Street Side	6'
Minimum Building Separation	
Living Space	8'
Patio Cover, Balcony or Deck	3'
Front to Front (entries) - at open space	20'
Side to Side with entries	20'
Garage Door to Garage Door of Alley	28'

PA13B & 13C - SINGLE FAMILY RESIDENCES

Planning Area 13B and 13C contain the centralized Model Complex with Sales Office and model homes for adjacent Planning Areas. As a result, PA13B and 13C feature a diverse range of product types. However, the predominant product type for these parcels is Single Family Detached homes. 52 such homes are proposed between the 2 planning areas.

All residences are 2-stories tall and are designed in three different architectural styles: Early California, Italian, Farmhouse. 3 Unique floor plans are proposed with increasing floor areas (2,000 sq.ft. - 2,214 sq.ft.) and a progression of rooms and features. Each dwelling unit has a private, attached 2-car garage.

All residences are designed in an “alley-loaded” configuration, meaning vehicles circulate through a drive alley at the rear of the property and park in garages at the rear of the home. This configuration hides automobiles in the rear and allows the entire front of the home to be active living spaces. The homes front directly onto city streets or pedestrian paseos, creating a pedestrian-focused neighborhood with charming front facades.

The residences also feature reciprocal-use side yards, meaning one residence may enjoy the entire yard between houses on one side of the house only, allowing the adjacent neighbor to enjoy the entire yard on the opposite side. This configuration provides every home with a meaningful, usable side yard instead of the narrow and unusable side yards typically of most single family residences.

In addition to the 3 architectural styles, there are 6 unique color schemes proposed for this neighborhood resulting in visual variety and a diversity of architectural elements. Such elements include the following:

- Concrete tile roofs
- Stucco and siding walls
- Window shutters
- Decorative trims
- Wood post & beam porches
- Variety of roof geometry and massing variation

GENERAL NOTES:

1. TREES SHALL BE LOCATED OUTSIDE OF UTILITY SETBACKS OR EASEMENTS AND SHALL BE LOCATED
   10' FROM ANY WATER OR SEWER LINE
   30' FROM ANY INTERSECTION
   10' FROM STREET LIGHT
   10' FROM FIRE HYDRANT OR STREET SIGN
   10' FROM DRIVEWAY APPROACH
   MATURE HEIGHT TO BE NO TALLER THAN 20' IF PLANTED UNDER UTILITY WIRES
2. STREET TREE SPECIES AND SPACING SHALL CONFORM TO ADJACENT TRACTS.
3. SIGHT DISTANCE TRIANGLES AT INTERSECTIONS AND DRIVEWAYS SHALL BE IN ACCORDANCE WITH COUNTY STANDARD NO. 821. VEGETATION WILL BE 30" MAXIMUM HEIGHT IN LIMITED USE AREAS.
4. ALL LANDSCAPE IMPROVEMENTS DEPICTED HEREIN OUTSIDE OF PUBLIC RIGHT OF WAY TO BE MAINTAINED BY PRIVATE PROPERTY ASSOCIATION(S) OR HOMEOWNERS ASSOCIATION(S).
5. SLOPE PLANTING SHALL INCLUDE PERMANENT GROUND COVER ADEQUATELY PLANTED WITH SHRUBS AND/OR TREES. PLANT MATERIAL AND MULCH TO BE SUITABLE FOR SLOPE USE AND PREVENTION OF SURFACE EROSION. PLANT SELECTION SHALL ENSURE FULL SLOPE COVERAGE WITHIN 12 MONTHS OF PLANTING.
6. 3" MINIMUM DEPTH OF SHREDDED BARK MULCH IN ALL PLANTER AREAS EXCLUDING HYDROSEED AREAS.
7. AGRONOMIC SOILS REPORT WILL BE PROVIDED DURING FINAL DESIGN.
8. 50% OF ALL TREES SHALL BE 24" BOX, 30% OF ALL TREES SHALL BE 36" BOX, AND 20% OF ALL TREES SHALL BE 48" BOX.

Fall 2021 Report Card for Riverside, CA
By The League of American Bicyclists C

1.0 Introduction

1.1 Purpose of Report & Objectives

This report aims to determine appropriate residential parking rates that can effectively serve the proposed Eastvale Square Project. This parking analysis includes a review of parking requirements from 38 comparable cities within the Inland Empire area. Furthermore, a parking management plan has been developed to address parking needs and manage parking spaces efficiently. The implementation of a parking management plan (PMP) will ensure fair parking access to meet the needs of the residents and guests. The features outlined in the PMP must be integrated into the Declaration of Covenants, Conditions, and Restrictions (CC&Rs).

The proposed project will utilize recommended parking rates that are more intense than the City of Eastvale rates and the Eastvale Square Amendment. Parking rate data from 38 comparable cities were collected to create an 85th-percentile parking rate per dwelling unit type[1]. The PMP will utilize various features for the residents and their guests/visitors.

1.2 Site Location & Project Description

The Eastvale Square (hereinafter referred to as "project") is located in the City of Eastvale. The project site is bounded by 58th Street to the North, Limonite Avenue to the South, Hamner Avenue to the East, and Scholar Avenue to the West. In total, the entire project consists of approximately 2,500 residential dwelling units.

Access to the project site is provided through residential collector streets Civita Way, Bootsma Boulevard, and Premier Place. Direct access to each planning area is provided via driveways.

This parking review and parking management plan only applies to Phase C of the Eastvale Square, which generally includes the northwestern portion of the site.

Exhibit A shows the location of the project. **Exhibit B** illustrates the planning areas for Phase C of the Eastvale Square.

The Institute of Transportation Engineers (ITE) describes single-family attached housing in the *ITE Parking Generation Manual, 6th Edition*. Single-family detached housing and multifamily housing are defined in the *ITE Trip Generation Manual, 12th Edition*.

- "Single-Family Attached Housing" (ITE Land Use 215, *ITE Parking Generation Manual, 6th Edition*) includes any single-family housing unit that shares a wall with an adjoining dwelling unit, whether the walls are living space, a vehicle garage, or storage space. This land use

[1] The 85th percentile rate, as outlined in the ULI (Urban Land Institute) Shared Parking Manual, 3rd Edition, is considered an acceptable and common methodology for determining adequate parking supply when combining parking ratios from multiple sources. This approach is also consistent with standard industry practice.

includes duplexes (defined as a single structure with two distinct dwelling units, typically joined side-by side and each with at least one outside entrance) and townhouses/rowhouses (defined as a single structure with three or more distinct dwelling units, joined side-by-side in a row and each with and outside entrance).

- "Single-Family Detached Housing" (ITE Land Use 210, *ITE Trip Generation Manual, 12th Edition*) includes any single-family detached home on an induvial lot.
- "Multifamily Housing[2]" (ITE Land Use 220, *ITE Trip Generation Manual, 12th Edition*) includes apartments or stacked townhomes with two or three floors (levels) of residences. Therefore, dwelling units that share a wall or level and have more than three dwelling units attached are considered multifamily housing.

Based on these ITE definitions, Phase C of the proposed project is summarized by planning area and land use in **Table 1-1**.

It is important to note that for the purposes of this analysis, single-family housing is not being distinguished between attached or detached since the parking ratios remain the same regardless of the classification.

In total, Phase C of the proposed project includes 529 residential dwelling units comprised of 457 single-family dwelling units and 72 multifamily dwelling units.

Table 1-1 | Eastvale Square Phase C Project Description

Planning Area (PA)	Land Use	Number of Dwelling Units
7B	Multifamily Housing	72
7C	Single-Family Housing	80
12A	Single-Family Housing	72
12B	Single-Family Housing	87
12C	Single-Family Housing	73
13A	Single-Family Housing	64
13B	Single-Family Housing	32
13C	Single-Family Housing	49
	Total Number of Dwelling Units	***529***

[2] This definition of multifamily housing is intended for the "Low-Rise" subcategory defined by ITE to represent residential buildings that have two or three floors (levels).

2.0 Parking Requirements & Recommended Rates

The following section calculates appropriate parking rates for the proposed project's respective dwelling unit types. The 85th percentile is determined by analyzing data compiled from 38 comparable cities. These rates do not assume the enforcement of a parking management plan, which will further help reduce parking demand at the project site.

2.1 City of Eastvale Parking Requirements

The City of Eastvale Municipal Code §120.05.060—Off-Street Vehicle Parking identifies parking design standards and the number of required parking spaces for various land use types, including residential uses.

The Eastvale Square project involves developing a mix of single-family and multifamily dwelling units.

Per §120.05.060 of the City of Eastvale Municipal Code, the following parking requirements have been identified for single-family and multi-family residential dwelling units, respectively:

- Single-Family Dwelling Units – 2.00 spaces per dwelling unit
- Multifamily Dwelling Units
    - Single Bedroom Dwelling Unit – 1.25 spaces per unit
    - Two Bedroom Dwelling Unit – 2.25 spaces per unit
    - Three or More Bedroom Dwelling Unit – 2.75 spaces per unit

2.2 Other Local Agencies Residential Parking Requirements

The parking requirement for a development is typically estimated using the respective city's rates outlined in their municipal code or other documented sources.

This study utilized parking rates to determine an adequate parking rate from 38 comparable cities in the Inland Empire. The municipal code from each city was reviewed to determine parking rates based on the residential dwelling unit type (i.e., multi-family and single-family). From this, the 85th percentile parking requirements were utilized from all cities surveyed. The 85th percentile parking ratio is identified by the *ULI (Urban Land Institute) Shared Parking Manual*, 3rd Edition publication, as an acceptable and standard methodology for determining adequate parking supply when combining parking ratios from multiple sources. This approach is also consistent with standard industry practice.

A compiled list of the cities utilized is shown in **Table 2-1**.

[1] Thirty-eight (38) cities representing the Inland Empire Region as identified per the Municipal Management Association of Southern California (MMASC). Source: https://mmasc.org/163/Inland-Empire-Region.

Table 2-2 shows a summary of Eastvale's parking rate, the 85th percentile parking rate, and the recommended parking rates. The recommended parking rate was calculated using the 85th percentile parking rate. The calculations yielding the 85th percentile parking rate per dwelling unit type can be seen in **Appendix A**.

Table 2-2 | Parking Rate Summary

Dwelling Unit Type[1]		City of Eastvale Parking Rate	85th Percentile Parking Rate[2]	Recommended Parking Rates	Proposed Parking Rate Increase
Multifamily	1 - Bed	1.25	2.36	**2.36**	**+1.11**
	2 - Bed	2.25	2.36	**2.36**	**+0.11**
	3 - Bed	2.75	2.90	**2.90**	**+0.15**
	4 - Bed	2.75	3.29	**3.29**	**+0.54**
	5 - Bed	2.75	3.29	**3.29**	**+0.54**
Single-Family		2.00	2.00	**2.20**	**+0.20**

1 Each dwelling unit type will have a 2-car garage.

2 Thirty-eight (38) cities representing the Inland Empire Region as identified per the Municipal Management Association of Southern California (MMASC). Source: https://mmasc.org/163/Inland-Empire-Region.

3 The Recommended Parking Rates (for single-family) consist of the base requirement of "2.00 spaces per unit" plus an additional 0.2 guest parking spaces per unit. Typically, guest spaces are not included in the parking rates for single-family homes since it is assumed that there is off-street parking available. However, in the Eastvale Square, guest parking will be provided within each planning area. Hence, this recommended rate allows for one guest space for every five units.

Based on the research, the City of Eastvale's multifamily parking rates are consistently lower than the calculated 85th percentile parking rates from other cities in the Inland Empire. Therefore, to be conservative, the recommended parking rates for the multifamily land uses are based on the 85th percentile parking rates and would appropriately serve the proposed project.

The recommended single-family parking rate is higher than Eastvale's and 85th percentile parking rates. According to the Urban Land Institute (ULI) Third Edition Shared Parking, dated 2020, residential land uses utilize a 0.10 parking rate for visitors during the weekday and 0.15 during the weekend. The project utilizes an additional 0.20 guest parking spaces per unit as a conservative approach.

Tables 2-3 through 2-10 summarize the parking calculations for each planning area and the required parking for each planning area within Phase C of the proposed project based on the 85th percentile parking standards.

As shown in the following tables, the recommended parking rate for the single-family residential planning areas consists of 2.00 resident parking spaces per dwelling unit and 0.20 guest parking spaces per dwelling unit, resulting in an overall recommended parking rate of 2.20 spaces per dwelling unit. For the multifamily residential planning area (i.e., planning area 7B only), the recommended parking rate established consists of approximately 0.82 guest parking spaces per dwelling unit and approximately 2.00 resident parking spaces per dwelling unit, varying based on bedroom count.

Table 2-3 | Eastvale Square 2026 Planning Area 7B Parking Calculation

Dwelling Unit Type		Number of Dwelling Units	City of Eastvale Municipal Code 120.05.060 Parking Code	City of Eastvale Parking Requirements			85th Percentile Parking Rate[1]	85th Percentile Parking Requirements			Recommended Parking Rates[2]	Recommended Parking Requirements

Single-Family	2 - Bed	80	"2.00 spaces per unit"	160	0	160	2.00	160	0	160	**2.20**	160	16	176

[1] Sourced from 38 comparable cities in the San Bernardino / Riverside County areas.

[2] The recommended rates include the base "2.00 spaces per unit" along with an additional 0.2 spaces per unit for guest parking. Single-family parking rates generally do not include guest spaces because it's assumed that off-street parking is available. Eastvale Square does not allow intra-street parking; therefore, this rate allows one guest space for every 5 units.

Eastvale Square does not allow intra-street parking; therefore, this rate allows one guest space for every 5 units.

3.0 Proposed Parking Spaces

This section summarizes the parking provided within Phase C of the proposed project and compares the parking provided to the parking requirements established in Section 2.0.

The parking inventory for Phase C of the proposed project generally consist of three parking space types: resident parking, lottery-based resident parking, and guest parking.

3.1 Resident Parking Spaces

Each residential dwelling unit within Phase C will be provided with an enclosed two-car garage. The garage parking spaces represent the primary resident parking supply and are intended to accommodate two standard-sized vehicles per dwelling unit.

Each residence within Planning Area 12A is also provided with a driveway capable of accommodating two additional standard-sized vehicles.

Resident parking will be managed in accordance with the Parking Management Plan presented in Section 4.0, including requirements related to garage utilization and enforcement.

3.2 Lottery-Based Resident Parking Spaces

In addition to the resident parking provided within enclosed garages, a portion of the non-garage parking inventory within each planning area may be designated as lottery-based resident parking.

Under the Parking Management Plans previously established for Phases A and B of the Eastvale Square project, non-garage parking spaces were designated for guest use. However, following occupancy of Phase A, concerns have been raised by residents with more than two standard-sized vehicles and/or oversized vehicles regarding the ability to accommodate their vehicles within the two-car garage provided for each residence. To address these potential concerns under Phase C, a lottery-based resident parking program has been established. Lottery-based resident parking is intended to provide an additional on-site parking opportunity for residents whose parking needs cannot be fully accommodated by the two parking spaces provided within their enclosed garage. These spaces supplement, rather than replace, the resident parking provided within the garages.

The number of lottery-based resident parking spaces within each planning area has been established based on the available non-garage parking inventory while maintaining the minimum guest parking supply required for the respective planning area. Therefore, the number of lottery-based resident parking spaces represents the maximum number of non-garage parking spaces that may be designated for resident use while continuing to satisfy the guest parking requirement.

Lottery-based resident parking shall be subject to eligibility requirements and availability and shall be managed in accordance with the parking restrictions and enforcement procedures established in the Parking Management Plan presented in Section 4.0.

It is important to note that Planning Area 12A will not include any lottery-based resident parking spaces. Each residence within Planning Area 12A is provided with an enclosed two-car garage and a driveway capable of accommodating two additional standard-sized vehicles. Therefore, each residence can accommodate up to four standard-sized vehicles, and additional resident parking is not proposed within Planning Area 12A.

3.3 Guest Parking Spaces

Guest parking spaces will be provided throughout each planning area to accommodate visitors to the residential community. Guest parking is separate from the resident garage parking and lottery-based resident parking supplies identified above.

Guest parking spaces shall remain available for guest use and shall be managed in accordance with the parking restrictions and enforcement procedures established in Parking Management Plan presented in Section 4.0.

3.4 Total Parking Inventory

Table 3-1 summarizes the required parking, proposed parking inventory, and resulting parking ratios for each planning area within Phase C.

As shown in Table 3-1, all planning areas located within Phase C of the Eastvale Square are expected to meet the parking requirements and recommended parking rates. Each planning area within Phase C will provide sufficient parking to meet or exceed its applicable parking requirements. Therefore, the proposed Phase C parking supply is considered adequate to accommodate the anticipated resident and guest parking demand.

In order to ensure adequate parking is provided, the following parking management plan presented in this document will propose enforceable restrictions on guest and resident parking.

Table 3-1 | Eastvale Square 2026 Phase C Parking Summary

[1] Total required parking is based on the 85th percentile parking rate from 38 comparable cities in the San Bernardino / Riverside County areas.

4.0 Parking Management Plan

The following Parking Management Plan (PMP) applies to all Planning Areas within Phase C. It will be incorporated into the rules and regulations portion of the homeowner's association adopted Declaration of Covenants, Conditions, and Restrictions (CC&Rs). The PMP aims to outline the best practices (objectives, policies, and enforcement) to optimize parking for each planning area.

4.1 Definitions

The following definitions of terms are provided for this Parking Management Plan.

1. Association: Association means Association, which is the homeowners association formed under California Civil Code section 4080 to operate and manage the residential elements of the community, its successors and assigns.

2. Authorized Vehicle: The following vehicles are Authorized Vehicles: standard passenger vehicles including, without limitation, automobiles, passenger vans designed to accommodate ten (10) or fewer people, motorcycles and pickup trucks having a manufacturer's rating or payload capacity of one (1) ton or less.

3. Prohibited Vehicle: The following vehicles are "Prohibited Vehicles": (i) recreational vehicles (e.g., motorhomes, travel trailers, camper vans, boats, etc.), (ii) commercial-type vehicles (e.g., stake bed trucks, tank trucks, dump trucks, step vans, concrete trucks, limousines, etc.), (iii) buses or vans designed to accommodate more than ten (10) people, (iv) vehicles having more than two (2) axles, (v) trailers, inoperable vehicles or parts of vehicles, (vi) aircraft, other similar vehicles or any vehicle or vehicular equipment deemed a nuisance by the Board, (vii) any vehicles or vehicular equipment deemed a nuisance by the Board, and (viii) any other vehicles not classified as an Authorized Vehicle.

4. Parking Permit: An Association issued vehicle specific permit to a Resident which, when properly applied to and displayed, authorizes a vehicle to park in the areas designed for parking by permit only.

5. Parking Pass: An Association-issued, and vehicle-specific, temporary parking permission for Guests, which, when properly applied to and displayed, authorizes a vehicle to temporarily park in the areas designed for guest parking.

6. Resident: Any owner, tenant, or resident of the Association

7. Guest: An authorized person visiting the property that does not reside in the community.

8. Safelist: The recording of specific vehicle information for the purpose of temporarily exempting a vehicle from enforcement measures related to selected parking restrictions for a predetermined period of time.

4.2 Parking Spaces

Parking spaces are classified as resident parking spaces, lottery-based resident parking spaces, and guest parking spaces. The types of parking spaces are further described below.

4.3 Resident Parking

Each dwelling unit includes an enclosed two-car garage for resident parking. The Association shall adopt and administer a parking inspection program to ensure resident garages are free and clear of obstructions and available for resident parking.

Each residence within Planning Area 12A is also provided with a driveway capable of accommodating two additional standard-sized vehicles.

4.3.1 Parking Restrictions

Residents shall register their Authorized Vehicles with the Association's management company. Residents will be provided with a Resident Parking Permit to be displayed in accordance with the Association's rules and regulations (e.g., shall be affixed to the window or be displayed from the vehicle's rear-view mirror). The validity of a Parking Permit which has been issued by the Association shall depend on adherence to the Association's rules and regulations. The issuance of Parking Permits shall be vehicle and property address specific. Parking Permits shall be renewed annually or less frequently as may be set forth in the Association's rules and regulations.

Residents shall park in their enclosed garage spaces. Residents shall not be permitted to park in guest parking spaces. Residents with a valid Resident Parking Permit may park in the private recreation/park parking area during the daytime hours, generally 6AM to 10PM. Any resident parking in a guest parking space at any time, or in the private recreation/park parking area during nighttime hours, is subject to citation and/or towing.

4.4 Lottery-Based Resident Parking

The lottery-based resident parking program will provide eligible Residents with the opportunity to use one additional parking space outside their assigned two-car garage.

Lottery-based resident parking spaces shall be individually designated and assigned to eligible Residents through a lottery administered by the Association. Residents selected through the lottery will be issued a Parking Permit authorizing the registered vehicle to utilize the assigned parking space.

4.4.1 Eligibility Requirements

To be eligible for the lottery-based resident parking program, a Resident shall have two Authorized Vehicles registered to the residence and parked within the residence's enclosed two-car garage. The Association shall verify that the garage is free and clear of obstructions.

Each eligible residence may submit one application for an additional lottery-based resident parking space. The Association may require proof of residency, vehicle registration, and other information necessary to verify eligibility.

4.4.2 Application and Lottery Process

The Association shall establish an annual application period for Residents seeking a lottery-based resident parking space. Residents seeking an additional parking space shall be required to submit a new application each year and demonstrate continued compliance with the eligibility requirements.

Following verification of eligibility, each eligible residence shall be entered into a random lottery for the available spaces within their respective planning area. To promote transparency and provide Residents with an opportunity to observe the selection process, the annual lottery shall be conducted in a public setting.

If the number of eligible applicants is equal to or less than the number of available lottery-based resident parking spaces, spaces may be assigned to each eligible applicant based on the order established through the lottery drawing. If the number of eligible applicants exceeds the available parking supply, spaces shall be assigned based on the order established through the lottery drawing.

Eligible Residents who are not initially assigned a space may be placed on a waitlist in the order established by the lottery. If a parking space becomes available during the applicable permit period, the space may be offered to the next eligible Resident on the waitlist.

The Association may establish reasonable application fees, permit fees, administrative fees, or other fees associated with participation in the lottery-based resident parking program.

4.4.3 Parking Restrictions

Parking in lottery-based resident parking spaces is not permitted without the Authorized Vehicle displaying a valid Parking Permit. Parking Permits will be vehicle-specific and associated with the numbered parking space assigned to the Resident. An Authorized Vehicle may park overnight in a lottery-based resident parking space.

Residents assigned to a lottery-based resident parking space shall continue to maintain and utilize the enclosed garage for the parking of two Authorized Vehicles. The Association may periodically verify continued compliance with this requirement.

Guest Vehicles and Prohibited Vehicles shall not be permitted within lottery-based resident parking spaces. Vehicles parked without a valid Parking Permit or otherwise in violation of the Association's rules and regulations will be subject to citation and/or towing.

4.4.4 Assignment and Renewal

Lottery-based resident parking spaces shall be assigned for a maximum period of one year. Assignment of a parking space through the lottery does not provide the Resident with a permanent or continuing right to the space beyond the applicable annual permit period.

At the conclusion of each annual permit period, all lottery-based resident parking assignments shall expire. Residents seeking an additional parking space for the subsequent year shall submit a new application, demonstrate continued eligibility, and participate in the annual lottery process. A Resident who was assigned a parking space during the previous year shall not be guaranteed the same or another lottery-based resident parking space during a subsequent year.

The Association shall be responsible for administering the lottery-based resident parking program, including application procedures, eligibility verification, annual lottery administration, Parking Permit issuance, applicable fees, renewal, reassignment, and enforcement.

4.4.5 Parking Areas

Lottery-based resident parking spaces will be designated within each applicable planning area and distributed throughout the planning area to provide convenient access for participating Residents.

Lot L will provide lottery-based resident parking spaces for Planning Area 7B, and Lot I will provide lottery-based resident parking spaces for Planning Area 13B.

Exhibits C-1 through C-7 identify the locations of the designated lottery-based resident parking spaces, including the applicable spaces within Lots L and I. The exhibits shall serve as the basis for identifying the parking spaces subject to the lottery-based resident parking program.

4.5 Guest Parking

Guest parking areas are provided within uncovered surface parking areas within each planning area.

Lot L will provide guest parking spaces for Planning Area 7B.

4.5.1 Parking Restrictions

Parking in guest parking areas is not permitted without the Authorized Vehicle being registered on the Safelist and the vehicle displaying a valid parking pass. To register an Authorized Vehicle on the Safelist, a Resident must contact the Association's management company and provide the vehicle make, model, color, and license plate number of the guest vehicle. The management company will provide the Resident a temporary parking pass to be displayed on the dashboard of the Guest vehicle.

Residents shall be permitted to safelist an Authorized Vehicle a maximum of ten (10) times (days) per calendar month. Special exceptions will be made for Residents during the "moving in" period. During this period, a Resident vehicle may be placed on the safelist for up to 60 days from the close of the escrow date or execution of the lease agreement date to create space in the garage for resident parking.

An Authorized Guest Vehicle may park overnight in a guest parking space according to the term of the temporary parking pass. Guests are permitted to park in the private recreation/park parking areas between the hours of 9 AM to 9 PM. After 9 PM, vehicles parked in the private recreation/park parking areas are subject to enforcement actions including citation and/or towing.

The residential collector streets Civita Way and Premier Place will be marked for no overnight parking by any vehicle, including Authorized Guest Vehicles and Residents, and violators would be subject to citation and/or towing.

4.6 Public Parking Areas

Residential collector streets Civita Way and Premier Place are public streets that allow for on-street parking during the daytime hours. The streets will be signed to prohibit overnight parking. Vehicles in violation will be towed. The public parking on the collector streets is available to residents, guests, park users, and commercial users.

4.7 Enforcement

Patrols hired by the Association will occur at random days and times overnight in marked patrol vehicles. The officers will verify permits, check for violations, and issue citations or call for the towing of the vehicle.

1. In the event that any vehicle is found to be in violation of any provisions of these guidelines, or the Association's rules and regulations, such vehicle will be cited and immediately towed, without any further warning. No exceptions or grace periods will apply to "Immediate Tow Offenses".

2. In the event that any vehicle is found to be in violation of any provision of these guidelines other than those provisions specifically identified as an "Immediate Tow Offense", such vehicles will be subject to the following enforcement measures:

    - A written citation will be issued to the offending vehicle disclosing the nature of the violation, and that such vehicle is subject to towing at the vehicle owner's expense immediately upon discovery of the vehicle in subsequent violation of the same provision within the period as specified in the Association's rules and regulations (e.g., more than once within the same calendar year).

- No less than 72-hours shall pass prior to the vehicle being subsequently observed for compliance with the originally violated provision.
- In the event that the vehicle is again found to be in violation of the same provision or the guidelines within the period specified in the Association's rules and regulations, a second citation will be issued to the vehicle, at which time the vehicle may be immediately towed at the vehicle owner's expense without additional warning.

4.8 Additional Parking Management Features

The Parking Management Plan and additional parking management features, as described below, will help further reduce parking demand on the project site.

4.8.1 Available Public Transit

To reduce the demand for parking, the Eastvale Square proposes recommendations for alternative modes of transportation. These may include public transit, bike lanes, and pedestrian routes. Eastvale Square includes the buildout of internal sidewalks so pedestrians can access bus stops.

Based on the "Falling Transit Ridership: California and Southern California" report prepared for the Southern California Association of Government, dated January 2018, public transit accounted for approximately 5% of trips in the SCAG area in 2012. The availability of alternative modes of transportation would allow users to access the project without the need for a passenger car and individual parking space.

The report prepared for SCAG can be seen in **Appendix B**.

Riverside Transportation Authority (RTA) Bus Lines 3 and 29 have five (5) stops available within one-quarter (1/4) mile of the project site. Every RTA bus is equipped with at least two bike racks that are free to use and are accepted on a first-come, first-serve basis.

More information and specific bus schedules can be found at https://www.riversidetransit.com/index.php/riding-the-bus/maps-schedules.

Omnitrans Route 87 has two (2) stops located approximately one-half mile away from the project site. Omnitrans buses are also equipped with bicycle racks that are free to use and are accepted on a first-come, first-serve basis.

More information and specific bus schedules can be found at https://omnitrans.org/plan-atrip/routes-schedules/.

Eastvale Square contemplates an additional bus stop within the project that will be serviced by the Riverside Transit Authority (RTA). Additional bus stops are at the discretion of the RTA, however, given the commercial activity center and number of residents, an additional stop appears warranted. This

addition will further public transit access by the residents living in this community and will allow guests to be able to use the bus to visit.

4.8.2 Available Bike Racks

Based on a study by The League of American Bicyclists, dated 2021, approximately 0.71% of commuters bike in the County of Riverside. The project shall provide bicycle racks throughout the planning areas. This will encourage the use of alternative modes of transportation and reduce parking demand.

The study by The League of American Bicyclists can be seen in **Appendix C**.

4.8.3 Improve Transit Access, Safety, and Comfort

The California Air Pollution Control Officers Association (CAPCOA) released a handbook for quantifying greenhouse gas (and vehicle miles traveled) mitigation measures. From this handbook, measure SDT-1 is applicable to the project due to the buildout and improvement of the pedestrian network. The project will include pedestrian network improvements within the project site and connecting offsite in an urban/suburban area, therefore a 2% estimated VMT reduction is allowed per CAPCOA guidelines. Although this 2% is for VMT reduction, the same proportionality can be applied to reduce parking because of the increase in available alternative modes of transportation.

4.8.4 Resident Safelist

Residents cannot park in guest spaces as described in the Parking Management Plan above.

4.8.5 Community Outreach/Online Portal

The project's Homeowners Association (HOA) shall provide an online portal with local transit and multi-modal transit facilities/infrastructure information, as well as current maps, routes, and schedules for public transit.

4.8.6 Two-Car Garage Features

Each residential dwelling is equipped with a 2-car garage. It is common for residents to use their garages for extra storage space or as an at-home gym which leads to insufficient space to park their vehicles. The design of the dwelling units incorporates storage in order to facilitate residents parking vehicles in the garage spaces. For example, the City of Eastvale requires a length of 36 feet for a tandem-style parking garage, however, the Eastvale Square has designed garages to exceed minimum requirements at varying lengths. This allows for additional storage space to be utilized in every garage. Additionally, the garages have been designed to accommodate overhead storage racks and wall-mounted bicycle racks, which will also allow residents to maximize their garage space at their discretion.

4.8.7 Guest Safelist Program

The guest safelist program is described in the Parking Management Plan, above.

4.8.8 Ride Hailing Zones

Ride-Hailing Zones are anticipated to occur within the commercial portions of the Eastvale Square area. The ride-hailing zones are designed to reduce congestion, improve safety, and enhance the overall ride-hailing experience for both drivers and passengers. This provides another alternative mode of transportation which is similar to public transit and will help reduce the overall parking demand for the project.

5.0 Conclusion

RK Engineering Group, Inc. has completed this Parking Review and Parking Management Plan for Phase C – Planning Areas 7B, 7C,12A, 12B, 12C, 13A, 13B, and 13C. Through this analysis, all planning areas located within Phase C of the Leal Master Plan are expected to meet the 85th percentile parking standards. To ensure adequate parking, a Parking Management Plan has been prepared and places enforceable restrictions on guest and resident parking, ensuring adequate parking.

The HOA shall be responsible for clearly informing potential new residents of the parking rules and regulations in place by integrating PMP features into the community's CC&Rs.

The HOA will also be responsible for updating, managing, and enforcing all PMP features, whether through ongoing performance evaluations or program revisions. The HOA can enforce the PMP features by monitoring parking adequacy and issuing citations to violators. All residents must be informed of any changes to the rules and regulations.

RK ENGINEERING GROUP, INC. (RK) appreciates this opportunity to work on this project. If you have any questions regarding this study, please do not hesitate to contact us at (949) 474-0809.

Respectfully Submitted,
RK ENGINEERING GROUP, INC.

EXECUTIVE SUMMARY

In the last ten years transit use in Southern California has fallen significantly. This report investigates that falling transit use. We define Southern California as the six counties that participate in the Southern California Association of Governments (SCAG) – Los Angeles, Orange, Riverside, San Bernardino, Ventura and Imperial. We examine patterns of transit service and patronage over time and across the region, and consider an array of explanations for falling transit use: declining transit service levels, eroding transit service quality, rising fares, falling fuel prices, the growth of Lyft and Uber, the migration of frequent transit users to outlying neighborhoods with less transit service, and rising vehicle ownership. While all of these factors probably play some role, we conclude that the most significant factor is increased motor vehicle access, particularly among low-income households that have traditionally supplied the region with its most frequent and reliable transit users.

Transit service and use trends in Southern California

Long associated with the automobile, in the last 25 years Southern California has invested heavily in public transportation. Since 1990, the SCAG region has added over 100 miles of light and heavy rail in Los Angeles County, and over 530 miles of commuter rail region-wide. These investments, however, have not been matched by increases in transit ridership. Transit ridership in the SCAG region reached its postwar peak in 1985. Through the 1990s and 2000s ridership rose and fell modestly, but never again reached its 1985 level. Figure ES-1 shows that per capita trips have been mostly declining in the SCAG region since 2007, and have fallen consistently since 2013.

Figure ES 1. Transit trips per capita. *Relatively flat nationally, but down in California since 2009.*

This decline spans modes; it is not simply a case of bus ridership falling while rail ridership increases. Rail ridership, on net, is also down. Further, these aggregate numbers mask large asymmetries in transit service and use. Transit use in particular is heavily concentrated among a relatively small segment of the population, in a small number of the region's neighborhoods, and on a small share of the region's transit systems. As a result of these asymmetries, even small changes in these households, neighborhoods, or transit systems can have an outsized effect on regional transit use.

A few people make most of the trips

The average resident of the SCAG-region made about 35 transit trips in 2016, but the median resident made none. Only a minority of the population rides transit very frequently or even occasionally. About two percent of the population rides transit very frequently (averaging 45 trips/month), another 20 percent of the population rides transit occasionally (averaging 12 trips/month), and more than three-quarters of SCAG-region residents ride transit very little or not at all (averaging less than 1 trip/month). Heavy transit use, moreover, is concentrated among the low-income population, and especially low-income foreign born residents.

A few neighborhoods generate most of the trips

Ten percent of all of the people who commuted to and from work on transit in 2015 lived in 1.4 percent of the region's census tracts, which covered just 0.2 percent of the region's land area; the average number of transit commuters in these few tracts was almost 12 times the regional average. Fully 60 percent of the region's transit commuters lived in 21 percent of the region's census tracts, which occupied 0.9 percent of the region's land area. Overall, the most urban and transit-friendly neighborhoods in the SCAG region comprise less than one percent of the region's land area. These neighborhoods hold about 17 percent the

region's population, but 45 percent of its transit commuters. So while the region's transit systems are increasingly diverse and far reaching, transit riders remain highly concentrated.

A few operators carry most of the passengers

The SCAG region has over 100 transit operators, but just a few them carry the vast majority of riders. Figure ES-2 shows that nine percent of the region's operators are responsible for 60 percent of the region's transit service and carry about 80 percent of all transit riders.

Figure ES 2. Key metrics by operating grouping. *14% of operators carry 83% of the trips.*

Because service and riders are concentrated on the largest systems, ridership losses are concentrated on these systems as well. Four SCAG-region operators—LA Metro, Orange County Transportation Authority (OCTA), Los Angeles Department of Transportation (LADOT), and the Santa Monica Big Blue Bus—accounted for 88 percent of the state's ridership losses between 2010 and 2016. LA Metro by itself accounted for a remarkable 72 percent of the state's losses. Because LA Metro's losses are themselves highly concentrated, a dozen *routes* in LA County account for 38 percent of all the lost ridership in California. In fact, half of California's total lost ridership is accounted for by 17 LA Metro routes (14 bus and 3 rail lines) and one OCTA route.

Possible causes of eroding transit use

Why is transit use falling? We consider a number of potential explanations, and review our findings below.

Changes in transit service and fares have mostly followed and not led falling ridership

Transit use can fall if transit becomes harder to use: if service declines, or fares rise. It does not appear, however, that these factors played a large role in the SCAG region's falling ridership. While transit fare increases are never popular, they are occasionally necessary to keep pace with rising costs. Figure ES-3 shows the inflation-adjusted trends in average fare paid per mile of transit travel between 2002 and 2016 in the U.S., California, and the SCAG region. Fares in Southern California are lower than those in the rest of the state and the country and have been remarkably flat over time.

Figure ES 3. Average fare per passenger mile traveled in 2015 dollars. *Average fare per PMT remained fairly consistent and even declined a little since 2009.*

These regional averages can mask significant variation among transit operators. In particular, inflation-adjusted fares per boarding for both OCTA and the Big Blue Bus increased by about 50 percent between 2002 and 2016 — to nearly $1.25 and $0.75 per boarding respectively. So while fares have probably not caused significant ridership declines across the region, they may have played a role at operators like OCTA and Big Blue.

Transit service in the SCAG region, moreover, mostly rose while ridership was falling, and ridership fell even on routes that maintained excellent on-time records. These circumstances suggest that service quantity and reliability were not large factors in falling transit use. There is some evidence, admittedly limited, that riders felt unsafe on transit vehicles in recent years, which may have contributed to the ridership decline.

Fuel prices have likely played a contributing, but not leading role

Fuel prices have been volatile since 1998, but have fallen substantially since peaking in 2012. Figure ES-4 compares trends in fuel prices and transit use in the Los Angeles metropolitan area. While there is a generally positive relationship (as fuel prices rise so too does ridership), it is a relatively weak one – fuel prices rise and fall much more dramatically than transit patronage. The timing of transit's decline, moreover, is not conducive to a fuel price explanation. Per capita transit use in Southern California has been mostly falling since 2007, and it fell between 2009 and 2011 when fuel prices were rising sharply.

Data sources: National Transit Database (2000-2016), US Energy Information Administration

Figure ES 4. Transit ridership and gas prices in Los Angeles Metropolitan Area.

The Transportation Network Companies do not appear to have cannibalized transit

We have very little data that lets us directly measure the effect of transportation network companies (TNCs, like Lyft and Uber) on transit use. What evidence we do have suggests that most TNC trips are probably not replacing large numbers of transit trips. The typical TNC user does not resemble the typical transit rider, the typical TNC trip does not occur when and where most transit trips occur, and most TNC users report no change in their travel by other modes. However, if the pool of TNC users continues to expand, the effect of TNCs on transit use — both positive and negative — may expand as well.

Evidence about neighborhood change and migration of lower-income people is mixed, but suggestive

Transit is heavily-supplied in a small proportion of places, and heavily used by a small proportion of people. If the neighborhoods where transit quality is high change, and become less likely to hold the small group of people who use transit regularly, then transit use could fall. We find some evidence consistent with the idea that neighborhood change has been associated with less transit use. Areas that were heavily populated with transit commuters in the year 2000 became, in the next 15 years, slightly less poor, and significantly less foreign born. Perhaps most important, the share of households without vehicles in these neighborhoods fell notably. All these factors align with a narrative where a transit-using populace is replaced by people who are more likely to drive. We emphasize, however, that this relationship is not one we can measure with precision, and it would be premature to declare neighborhood change a large culprit in falling transit ridership.

Private vehicle access increased substantially from 2000 forward

A defining attribute of regular transit riders is their relative lack of private vehicle access. But between 2000 and 2015, households in the SCAG region, and especially lower-income households, dramatically increased their levels of vehicle ownership. Census data show that from 1990 to 2000 the region added 1.8 million people but only 456,000 household vehicles (or 0.25 vehicles per new resident). From 2000 to 2015, the SCAG region added 2.3 million people and 2.1 million household vehicles (or 0.95 vehicles per new resident).

The growth in vehicle access has been especially dramatic among subsets of the population that are among the heaviest users of transit. Between 2000 and 2015, the share of households in the region with no vehicles fell by 30 percent, and the share of households with fewer vehicles than adults fell 14 percent. Among foreign-born residents, zero-vehicle households were down 42 percent, and those with fewer vehicles than adults were down 22 percent. Finally, among foreign-born households from Mexico, the share of households without vehicles declined an astonishing 66 percent, while households with more adults than vehicles dropped 27 percent. Living in a household without a vehicle is perhaps the strongest single predictor of transit use; the decline of these households has powerful implications for transit in Southern California.

Vehicle ownership is not, of course, the only determinant of regional transit ridership—income, race, age, and nativity, to name a few, also matter. But vehicle access may well be the largest factor. We demonstrate the strong association between vehicle access and transit ridership by building a series of statistical models of transit ridership. The models cover the SCAG region, all of California, Los Angeles

County, and the SCAG region outside of LA County. Each model compares two predicted outcomes: the change in transit use we would expect to see based on due to changes in socioeconomic attributes *other than* vehicle ownership, and the change we would expect to see if we account, in addition, for changes in vehicle access. In short, we compare a scenario where incomes, nativity, racial composition, and various other attributes change the way they did from 2000-2015, but where vehicle access is unchanged, to a scenario where vehicle access changes as well.

Figure ES 5. Transit use changes based on area.

Figure ES-5 shows the results of these models. The dotted blue line in each case is an estimate of transit ridership trends between 2000 and 2015 based on changes in the region's income, nativity, and so on, but assuming no change in vehicle ownership. The solid red lines represent these same models, but with the region's observed changes in vehicle access included. In all cases the blue line predicts transit use starting at a lower point and declining only modestly, while the red line shows transit use starting at a higher point and falling sharply, more in line with what we are actually observing. The models reinforce the idea that vehicle access is the decisive factor in transit use: income, age, and many other factors matter, but they matter largely because they predict the ability to access and use motor vehicles. In Southern California since 2000, that ability has increased, and transit use has fallen.

Conclusion

Public transportation is unlikely to fare well when Southern California is flooded with additional vehicles, especially when those vehicles are owned disproportionately by transit's traditional riders. Much of the region's built environment is designed to accommodate the presence of private vehicles and to punish their absence. Extensive street and freeway networks link free parking spaces at the origin and destination of most trips. Driving is relatively easy, while moving around by means other than driving is not. These circumstances give people strong economic and social incentives to acquire cars, and — once they have cars — to drive more and ride transit less.

The advantages of automobile access, which are particularly large for low-income people with limited mobility, suggest that transit agencies should not respond to falling ridership by trying to win back former riders who now travel by auto. A better approach may be to convince the vast majority of people who rarely or never use transit to begin riding occasionally instead of driving. This task is unquestionably more difficult than serving frequent-riding transit dependents, and it would likely require weakening or removing some of the state's and region's entrenched subsidies for motor vehicle use. But the opportunity is substantial. The SCAG region, between 2012 and 2016, lost 72 million transit rides annually. That number seems daunting, but the region has a population of 18.8 million, and about 77 percent of those people (roughly 14.5 million), ride transit rarely or never. If one out of every four of those people replaced a single driving trip with a transit trip once every two weeks, annual ridership would grow by 96 million — more than compensating for the losses of recent years. The future of public transit in the SCAG region, then, will be shaped less by the mobility needs of people who do not own vehicles, and more by policy decisions that encourage vehicle-owning households to drive less and use transit more.

FALLING TRANSIT RIDERSHIP: CALIFORNIA AND SOUTHERN CALIFORNIA

In the last 15 years Americans have supported public transportation more and demanded it less. California, the nation's most populous state, is in many ways emblematic of this pattern. Motivated by concerns about congestion and climate change, California's state and local governments have invested heavily in transit, often with the explicit approval of voters. This investment is particularly evident in Southern California. Since 1990, the six-county Southern California Association of Governments (SCAG) region has added over 100 miles of light and heavy rail in Los Angeles County, and over 530 miles of commuter rail region-wide. In November 2016, voters in LA County approved a $120 billion sales tax measure for transportation, with a plurality of the funding dedicated to expanding and improving transit (Measure M: Metro's Plan to Transform Transportation in LA 2016). This measure marked the third such countywide tax increase since 1990, and the fourth one overall. Other SCAG counties have also routinely passed sales tax measures for transportation and transit improvements.

Over the same period, however, California's transit use (depending on how one measures it) has varied from modest increases to relative stagnancy to—in more recent years—steep decline. Southern California is again illustrative. Despite its heavy investments in transit, in absolute terms the region's transit ridership reached its postwar peak in 1985. Through the 1990s and mid-2000s ridership rose and fell modestly, never reaching 1985 levels, and in 2012 it began declining. In per capita terms, ridership has fallen more steadily since the 1980s. Ridership per capita was flat in the early 2000s, but started trending down again in 2007. In California overall, per capita ridership was flat until 2009, when it began a decline from which it has not recovered (The National Transit Database (NTD), 2015).

Why is transit ridership falling? The question is not merely academic. The combination of rising supply and falling demand has profound fiscal implications for transit operators, since it substantially increases the public cost of moving each passenger. Increased transit supply has meant increased public investment, particularly in new rail services. Measured as a ten-year rolling average of capital and operating costs, transit investment in both the US and California rose almost 50 percent between 2000 and 2015. These rising expenditures, when combined with falling patronage, yield falling productivity. Between 2005 and 2016, transit productivity —measured as passenger boardings per vehicle revenue hour (VRH) —has fallen 5 percent in California and 14 percent in the SCAG region. Falling productivity is not sustainable; it usually ends with more subsidies or less service.

Beyond fiscal concerns, falling ridership calls into question a number of California's ambitious environmental goals. California's aggressive agenda for combatting climate change is predicated in part on many people using transit more and driving less. The carbon reduction targets set out in Senate Bill 375, California's landmark climate reduction bill of 2008, involve large mode shifts to transit and away from driving, while the California Department of Transportation's current Strategic Management Plan includes an explicit goal of doubling the state's transit mode share by 2020 (California Department of Transportation, 2015). But transit ridership, despite heavy transit investment, is trending very much in the opposite direction.

This report assesses California's, and particularly Southern California's, recent ridership downturn. We emphasize Southern California because — as we will show — California's falling ridership is in many ways Southern California's falling ridership. Had transit use not fallen in the SCAG region through 2016, it would not have fallen statewide.

Our study considers the years from 2000 to 2015 or 2016 (depending on data availability). While widespread concern about falling transit use did not begin until ridership began falling absolutely in 2012, we focus on the per capita decline that began about five years before that. The falling absolute ridership of the last few years is important, and we do pay outsized attention to it. But we view it as a particularly acute manifestation of the longer-run per capita decline, not as a phenomenon in itself. Absolute declines in ridership are at once more noticeable and less important than per capita declines. Ridership numbers that are not adjusted for population lack context, and focusing only on absolute ridership declines can for that reason yield incomplete or misleading results.

For example, since 2012 gas prices have fallen sharply, transportation network companies (TNCs) like Lyft and Uber have expanded dramatically, undocumented immigrants have been granted drivers' licenses, and the economy has rebounded from the Great Recession. All these factors may have depressed transit use, but all of them also occurred well *after* per capita transit ridership began to decline. Thus none of them, individually or in combination, can fully explain Southern California's, or California's, transit patronage losses.

Our analysis faces data limitations common to examinations of transit. Aggregate data on transit use are widely available through the National Transit Database (NTD), but users of NTD data can never be entirely sure of the data's accuracy.[1] NTD records are compiled from the reports of individual transit operators to the federal government, and for a variety of reasons — from failure to report to mistakes in reporting to errors in correcting those mistakes— NTD data do not always match up with operator data. We have checked some of the NTD data used in this report against operator data and been satisfied that they reasonably conform, but checking all the data would be impossible. We emphasize that this problem is almost universal in transit studies: all data are imperfect, but the NTD is the nation's standard source for transit data.

A second issue is that while data on transit use are easy to find, data on transit *users* are not. Public transportation is used by a small and hard-to-track subset of the population, making riders (and especially former riders) hard to study. The U.S. Census, in its annual American Community Survey (ACS), provides detailed economic and demographic information about transit commuters, but commutes are a minority of transit trips, and commuters (as we will show) are a minority of transit riders. More detailed data on transit users can be found in the California Household Travel Survey (CHTS) which provides an in-depth look at travel of all types by Californians, and complements those travel data with extensive person-level

[1] Transit operators who receive funding from the Federal Transit Administration's Urbanized Area Formula Program, or its Rural Formula program, must submit data to the NTD on the financial and operating conditions of their systems, as well as the conditions of their assets and rolling stock. Just over 660 operators receive such funding and report to the NTD. See https://www.transit.dot.gov/ntd

socioeconomic information. But the CHTS is a one-year snapshot, only available for 2012. As a result, we have a data mismatch: excellent data for a single year, but a research question – why is transit ridership declining? – that demands data on changes over time.

A last data obstacle is that the determinants of transit use are varied, ranging from gas prices to auto ownership to the quality of transit service, and no single data set contains all of them. Some factors thought to influence transit use, like the availability of free parking, are not systematically tracked at all.

To work around these limitations, we draw on an array of spatial, person-level, and administrative data. At different points we use the U.S. Census summary files, the Integrated Public Use Microdata (IPUMS) of the Census,[2] state and national travel diary data, gas price and economic data from the Energy Information Agency and the Bureau of Labor Statistics, and data and rider surveys conducted by some of Southern California's larger transit operators. One operator—the Los Angeles County Metropolitan Transportation Authority (Metro, or LA Metro)—by itself accounts for most of the region's transit use and has ample public data available. As a result, at different points in the report when data for the entire region is lacking, we draw on data specific to LA Metro.

Largely because of these data constraints, the case we build is circumstantial; we offer no definitive proof of cause-and-effect. But the evidence is nevertheless compelling. The primary factor we identify is automobile ownership. In the last 15 years, household vehicle access in the SCAG region has grown dramatically. Vehicle ownership has grown particularly sharply among subgroups most likely to use transit, such as the low-income and the foreign born from Latin America. The steep rise in vehicle access among these groups that occurred as transit ridership began to fall is not direct proof, but it is a smoldering if not a smoking gun. Public transportation is unlikely to fare well when Southern California is flooded with additional vehicles. Much of the region's built environment is designed to accommodate the presence of private vehicles and to punish their absence. Extensive street and freeway networks link free parking spaces at the origin and destination of most trips. These circumstances give people strong incentives to acquire cars, and — once they have cars — to drive more and ride transit less.

The surge in vehicle ownership does not explain all of the transit decline. And it may well have been reinforced by falling gas prices and the rise of TNCs— though again we note that increasing vehicle ownership and declining transit use began before TNCs existed and when gas prices were still high. But increased vehicle ownership by itself probably explains much of Southern California's lost transit ridership.

Our findings accord with previous research about transit patronage. Giuliano (2005) has shown that compared to Americans at large, the poor use transit more but like it less. The typical low-income rider wants to graduate to automobiles, while the typical driver might view transit positively but have little interest in using it (Manville & Cummins, 2015). These facts, coupled with the falling ridership of recent years, raise questions about transit's future.

Transit ridership is not, by itself, a legitimate goal of public policy. Transit use is instead a means to achieve other public ends. Traditionally, transit's goals have been twofold: Providing mobility to disadvantaged people who lack it, and mitigating the social and environmental costs of private automobiles by providing alternatives to them. The first goal has long accounted for more of transit's ridership, while the second

[2] The IPUMS data are from Ruggles et al (2017).

has accounted for more of its rhetoric. Throughout the United States, and particularly in Southern California, public transportation advocates have emphasized transit's potential to manage traffic and reduce pollution. In practice, however, transit has functioned overwhelmingly as a social service for low-income people with little private mobility (Taylor & Morris, 2015).

Because transit has primarily carried low-income people, rising vehicle ownership among those people suggests a future where public transportation's core ridership could dramatically shrink. While this outcome poses a grave problem for transit operators, it is not obvious that transit operators should try to win these low-income riders back, at least not to the very high levels at which they rode transit previously. With very few exceptions, acquiring an automobile in Southern California makes life easier along multiple dimensions, dramatically increasing access to jobs, educational institutions and other opportunities (Kawabata & Shen, 2006). As a result, pulling low-income former riders out of their cars and back onto trains and buses could make transit agencies healthier but the region poorer. If transit agencies want to protect their fiscal health while also increasing social welfare, they may need to convince the vast majority of people who never use transit to begin riding occasionally instead of driving. This task is unquestionably more difficult than serving a large pool of people who have few alternatives to transit. Convincing some drivers to start using transit would likely require weakening or removing some of the state's and region's entrenched subsidies for motor vehicle use. But transit is unlikely to grow substantially, to accomplish its environmental goals, if driving remains artificially inexpensive.

THE SPATIAL AND DEMOGRAPHIC DISTRIBUTION OF AMERICAN PUBLIC TRANSPORTATION

Public transportation use in the United States is distributed unevenly across people and places. Transit accounts for about two percent of all passenger miles travelled (PMT), and about two percent of personal trips overall (NHTS 2009). These small overall numbers, however, conceal transit's outsized importance to some people in some places. The average U.S. resident made about 32 transit trips in 2016 (Neff & Dickens, 2017; U.S. Census Bureau, 2016), but the modal resident made zero trips, and a small number of people rely on transit extensively. Chu (2012) shows that 20 percent of Americans live in neighborhoods without transit, while 60 percent live in neighborhoods with transit but have not used it in the previous month. Another 11 percent uses transit less than ten times per month, while eight percent take ten or more trips monthly.

The small share of people who use transit frequently is concentrated in a handful of metropolitan areas. In 2016, 65 percent of all transit boardings occurred on the nation's ten largest transit operators; the 15 systems in the New York region by themselves account for over 40 percent of the country's transit trips (FTA, 2016). Even within these transit-heavy areas, however, most people do not use transit regularly, because most transit use occurs in the central cities, and specifically among lower-income and foreign-

born people in these cities. And even within these subgroups, whose members are *more likely* to ride transit, *most* people do not use transit.

Why is transit use so rare? In the broadest terms, travelers will choose to ride transit when they believe transit has the lowest relative costs – in money, time, or risk and uncertainty – of the various transportation modes available to them. These factors help explain why so much transit use occurs in New York City. New Yorkers ride transit as much as they do not only because transit service is frequent and extensive, but also because riding a subway across Manhattan is often cheaper, faster and more reliable than driving. Manhattan's streets are clogged with unpredictable congestion and parking is scarce and expensive.[3] In most other places, driving is a faster door-to-door option, and one that people also believe is safer (Yoh, Iseki, Smart, & Taylor, 2011). Driving in these places is also more reliable: when congestion is low and transit service is sparse, riding transit might involve more time waiting at stops and transferring between vehicles, which make trips seem unpredictable, complicated and burdensome (Iseki & Taylor, 2009). For this reason, outside New York and a handful of other urban places, most transit users are people who for various reasons do not have the option of travelling by car.

The fact that so few people use transit regularly is important but often overlooked, especially in discussions about why ridership might fall. Per capita transit use can fall when current riders ride less, when the number of people who never ride grows, or both. Strictly speaking, there is no difference between these root causes. A person who rides and stops is a lost transit rider, but so is a person who moves to a transit service area and never rides. The decision to stop and the failure to start both reduce per capita transit use.

In practice, however, concerns about falling per capita ridership are rarely concerns about new residents who never start riding, and are instead concerns about current riders who leave. This dynamic is understandable, as riders who leave are easier to notice. But it is important to remember that transit riders leave transit regularly, even when ridership is stable or growing. If riders who leave are replaced by others, their departure from transit is less noticeable, and ridership might remain unchanged. For that matter, ridership can remain unchanged even when riders leave and are *not* replaced by other people. If an existing rider stops taking her daily trip and drives instead, but another frequent rider adds a daily trip, the number of riders falls but per capita ridership does not. Conversely, if two riders who take three trips a day each start taking two, the number of riders won't change but ridership will. Riders are not equivalent to ridership; stable ridership can conceal large churn among riders, and vice-versa.

The Spatial Concentration of Transit in California and Southern California

As it is in the nation at large, public transit use in California is unevenly distributed: a small share of people and places account for a large share of overall rides. Northern Californians use transit more intensively than Southern Californians, largely as a result of high ridership in San Francisco and its surrounding areas, but most of California's transit use occurs in Southern California, where a majority of the state's

[3] Manhattan also has relatively few highway lane-miles, which contributes to its surface-street congestion.

population lives (Figure 1). Transit accounts for 6 percent of all trips in the Bay Area, as opposed to 5 percent in the SCAG region, but the SCAG region – because it is so large – accounts for 52 percent of California's transit trips, while the Bay Area accounts for 28 percent. Southern California thus exerts a large influence on California's overall transit use.

Figure 1. Transit mode share and distribution of transit trips by California region.

Figures 2 and 3 show the trend in transit boardings nationwide, in California, and the SCAG region between 2000 and 2016, first in absolute and then in relative terms. Absolute ridership was largely flat over this time in all three geographies. In relative terms ridership grew steadily between 2004 and 2007 (SCAG region), 2008 (the U.S.), and 2009 (California). This period of growth was followed by patronage losses from the start of the Great Recession through 2011, particularly in California. The recession's end brought a gradual transit patronage recovery, followed by steep declines from 2014 onward.

Figure 2. Boardings *(unlinked passenger trips). Growing nationwide, but relatively flat in California and SCAG.*

Figure 3. Indexed boardings. *Growing nationwide, but California and SCAG face steeper declines, returning to 2000 levels.*

Figure 4 expresses these ridership trends in per capita terms. Between 2005 and 2016, per capita ridership peaked in California in 2009, in the nation in 2008, and in the SCAG region in 2007. Since 2007, per capita transit use in the SCAG region has been mostly falling—before the recession, the rise of Lyft and Uber, or the post-2012 drop in fuel prices.

Figure 4. Transit trips per capita. *Relatively flat nationally, but down in California since 2009.*

Because the SCAG region accounts for so much of California's ridership, and because in recent years its decline has been so steep, losses in the SCAG region from 2012 to 2016 actually account for all of California's ridership losses during that time. Figure 5 shows changes in transit ridership across California from 2012 to 2016. During this time annual transit boardings statewide fell by 62.2 million. The SCAG region, however, lost *72 million* annual rides, or 120 percent of the state's total losses. Ridership outside the SCAG region actually rose 20 percent, largely as a result of gains made by transit systems in San Francisco. The Bay Area Rapid Transit District (BART) alone accounted for 28.4 percent of the state's increased transit ridership (although by 2017 ridership on BART, and in California outside the SCAG region, had also started to fall).

Figure 5. CA net change in ridership (2012-2016). *Losses in CA are driven by losses from the largest operators in the SCAG region, while Bay Area region saw growth in ridership.*

Within the SCAG region, transit trips (and lost trips) are similarly geographically concentrated. We can illustrate this concentration in a number of ways. For example, the CHTS shows that in 2012 82 percent of the transit trips in the SCAG region were in Los Angeles County. Another 8 percent were in Orange County, and the remaining ten percent were spread over the other four counties.

A second way to measure concentration, which allows us to examine smaller levels of geography, is to use census data and map the location of the region's transit commuters. While commuters are not the majority of transit riders, they do tend to use transit frequently and intensively, and we have high-quality data about their residential locations. Those locations are intensely concentrated. In 2000, 2010, and 2015, 60 percent of the SCAG region's transit commuters lived in 20 percent of its census tracts, which represented (depending on the year) one to three percent of the region's land area. In all three years, ten percent of the region's transit commuters lived in one percent of the region's census tracts, which accounted for two-tenths of one percent (0.2%) of the region's land area.[4] (Note that even in these tracts, *most* workers do not commute via transit – 7 out of 10 use some other means.) Unsurprisingly, these tracts are overwhelmingly located in LA County, followed by Orange County.

A third way to illustrate the concentration of transit use is to examine transit trips by operator. Figure 6 shows that the ten largest transit agencies in the SCAG region account for 60 percent of all transit service

[4] Calculated from summary file data of the Decennial Census 2000, and the 2010 and 2015 ACS.

(measured in vehicle-revenue hours), and 80 percent of all transit trips. The smallest 60 transit operators, by contrast, account for just over 6 percent of service and just over two percent of trips.

Figure 6. Key metrics by operator grouping. *9% of operators carry 80% of the trips*

Digging still deeper, the distribution of service and trips within these large operators is also highly skewed. LA Metro accounts for most of the SCAG region's trips, and LA Metro's ridership is itself highly concentrated. The agency has over 100 transit routes, but in both 2012 and 2016 over half of its total rides took place on 20 of those routes.[5] Metro's busiest routes are also, unsurprisingly, where the agency has suffered the largest ridership declines. A dozen Metro lines accounted for 53 percent of all the agency's lost rides between 2012 and 2016.

Putting all this information together, we see that declining transit patronage through 2016 in California is essentially declining patronage in Southern California, and that Southern California's ridership declines are themselves remarkably concentrated. As a result, the state's lost ridership can be traced to a small number of Southern California transit operators. Four SCAG operators (LA Metro, the Orange County Transportation Authority (OCTA), the Los Angeles Department of Transportation (LA DOT), and the Santa Monica Big Blue Bus) accounted for 88 percent of the state's ridership losses, and LA Metro by itself accounted for a remarkable 72 percent of the state's losses. Because LA Metro's losses are themselves highly concentrated, a dozen *routes* from LA Metro account for 38 percent of all the lost ridership in California. Half of California's total lost ridership is accounted for by 17 LA Metro routes (14 bus and 3 rail lines) and one OCTA route.

[5] Calculated from Metro ridership-by-line data, 2012 and 2016.

If we examine these routes more closely (Figures 7 and 8), we see that they include both bus and rail. Transit agencies nationwide – LA Metro included – have made substantial investments in rail service, but the bus remains the workhorse of public transit in the US, the SCAG region and LA County. Bus trips are 78 percent of all transit trips in California and 86 percent of transit trips in the SCAG region.[6] Given that buses carry the most passengers, it is not surprising that they have also seen the largest ridership declines, accounting for 84 percent of the lost rides between 2012 and 2016. While some bus routes gained ridership, the bus routes that lost riders lost more than the growing routes gained. The five bus lines with the largest declines were urban routes that travel in and out of downtown LA, while the five lines that gained the most ridership ran more outlying and circumferential routes.

Two Metro rail lines, meanwhile – the Gold and Expo – opened extensions after 2012, and partly as a result their ridership grew. But Metro's remaining rail lines, most of which also travel into downtown LA, saw steep ridership losses that exceeded the Gold and Expo Line's gains. The SCAG transit decline thus spans modes; it is not a simple story of buses falling behind while rail surges. Instead major routes that run into the heart of the city – the sort of routes where transit is traditionally strongest – are losing riders precipitously.

[6] Calculated from the 2012 California Household Travel Survey.

Figure 8. LA MTA: Net change in Ridership (2013-2016) by mode. *Buses made up 84% of loss and rail made up 12%.*

The Demographic Concentration of Transit Use in Southern California

Transit use in the SCAG region is concentrated among a small group of people as well as a small number of places. People ride transit for different reasons, but a common thread running through regular transit users is lack of access to a private vehicle. This trait is not universal; many commuter rail passengers, for example, could make their trips by car and choose not to, but commuter rail is a small portion of overall transit ridership. In general, transit ridership is powerfully associated with lack of vehicle access (Taylor & Fink, 2013). Note again, however, that this relationship is not symmetrical. While most regular transit users lack vehicle access, most people without vehicle access do not regularly use transit, in part because transit is unavailable in many places.

Lack of vehicle access might arise for economic reasons, for medical reasons, or out of personal preference or habit (Brown, 2017). The relationship between vehicle access and transit use could also run two ways. People might ride transit because they do not have a car (either they cannot afford a car or cannot use

one for medical or legal reasons) or they may not have access to a car *because* they ride transit (they live and work near high-quality transit and so need not spend money on vehicles).[7]

Non-economic reasons for lacking a vehicle include disabilities or medical conditions that prevent driving, and legal sanctions that forbid it (e.g. losing a license as a result of traffic infractions, or being in the country illegally). In Southern California, perhaps the largest non-economic source of low vehicle access is immigration. Even controlling for income, immigrants are less likely than the native born to have vehicles, and more likely to use public transportation. Why this is so remains something of a puzzle. Scholars have proposed various explanations, including immigrants' tendency to live in dense areas; their tendency to live in close-knit communities that allow for more communal resources, including sharing of cars; a habit of not driving carried over from the native country; and – if the immigrant is undocumented – legal barriers to owning and operating automobiles (Blumenberg & Smart, 2014; Chatman & Klein, 2009, 2013; Liu & Painter, 2012). The evidence suggests, however, that driving less and riding transit more is not universal among the foreign born – immigrants from some countries, particularly Mexico and many countries in Central America, are less likely than others to drive and more likely to ride (Chatman, Klein, & DiPetrillo, 2010). There is also substantial evidence that over time immigrants assimilate and begin to travel more like the native born, with more driving and less transit use (Blumenberg & Evans, 2010). Thus transit ridership cannot be sustained by immigration alone; it requires a steady stream of new immigrants from particular countries, who will arrive with a transit habit and replace those earlier arrivals who assimilate driving.

Economic reasons for lacking vehicle access can include both low incomes and the high cost of driving. In some parts of California, such as northeastern San Francisco, a combination of heavy congestion, high tolls, and scarce and expensive parking make the price of owning and operating a vehicle high, and encourage even affluent people to ride transit (notably, the same density that makes the city congested can makes transit service more effective by putting large numbers of trip origins and destinations within steps of transit stops). Yet there are few places in Southern California where driving is challenging in this way. Congestion is severe, but parking is abundant and often inexpensive if not free, and low-to-moderate densities make transit less able to effectively link many places. As a result, income becomes the principal determining factor in vehicle access, and thus of transit use.

Figure 9 uses CHTS data to illustrate the disproportionate propensity to use transit among the low-income, the foreign-born, and households with limited vehicle access. The figure's dashed vertical line represents the overall average of daily unlinked transit trips in the SCAG region, and the circle associated with each subgroup indicates its relative size in the overall population. The figure shows, in short, that transit use is more common among smaller segments of the population. African Americans and Hispanics ride transit about three times as much as Whites and Asians. Immigrants who have been in the country less than ten years ride substantially more than both the native-born and longtime immigrants who have been in the country longer. Households earning under $25,000 per year ride more than twice as much as households earning $25,000 to $50,000, and these households in turn ride twice as much as households earning over $50,000 annually. By far the largest differences, however, are those that represent vehicle availability. Households without vehicles take almost five times as many transit trips as households with one vehicle,

[7] These reasons might interact. People who cannot afford vehicles might choose to live near transit because of their lack of vehicle access (Glaeser, Kahn, & Rappaport, 2008).

and households with one vehicle take twice as many trips as households with two. If we measure vehicles per adult, households with one vehicle for every two adults take twice as many trips as households with one vehicle per adult. Finally, people without driver's licenses take many more transit trips than licensed residents.

Figure 9. Mean transit trips by socio-economic characteristics and automobile access (CHTS).

The drawback of the CHTS, as we have mentioned before, is that it provides only one year of data. Table 1 uses LA Metro's annual rider surveys to show that the prevalence of people with low incomes and limited vehicle access on transit extends across years. We examine the 2005 survey (the earliest available) and then annual surveys from 2010 to 2016. Across both bus and rail riders, at least 69 percent of transit users (and often closer to 80%) report not having a vehicle available to make their trip. These proportions are higher for bus riders than rail riders, but even among rail riders between 58 and 65 percent (depending on the year) report not having a vehicle. The share of riders reporting not having a vehicle, furthermore, has grown over time.

In addition to limited vehicle access, Metro riders generally have low incomes and are strongly dependent on transit. Close to half of all surveyed LA Metro riders in each year have household incomes under $15,000. The median household income of riders hovers near $16,000, and the average income barely exceeds $25,000 in most years. In most years a strong majority of riders are habitual (riding over 4 days a

week) and a majority are longtime users (riding over 5 years). The riders are also overwhelmingly nonwhite.

All these characteristics make Metro riders – who are, again, most of SCAG's transit users – strikingly different from the population at large. The CHTS shows that in 2012, 73 percent of LA County residents took transit only occasionally or never, and the 2016 Census ACS shows that LA County residents are 26 percent non-Hispanic white, and that county median household income is $62,000. Only 5 percent of the county's households earn less than $15,000 per year. Thus SCAG's largest transit operator has for over a decade been dominated by low-income, nonwhite people with little vehicle access, people who live and move very differently from the typical Southern Californian.

Source: Metro Rider Surveys. Not all questions asked every year. Dollars are nominal. "No vehicle" indicates that respondents lack access to a vehicle for the current trip.

Table 1. Characteristics of LA Metro riders, 2005-2015.

The importance of vehicle access is reinforced by evidence from other transit operators. A small operator in the SCAG region, the Montebello Bus Lines, surveyed residents (not just riders) in 2016. Most respondents did not ride transit, and 55 percent of non-riders said they would only ride if they lost access to their car. Most people who did ride did not have access to a vehicle (Diversified Transportation Solutions 2015). In 2016, the OCTA also surveyed Orange County residents about their travel behavior. The results were similar. Only three percent of people who always had vehicle access listed transit as their primary travel mode, compared to 33 percent of people who never had a vehicle (True North Research 2015).[8]

The OCTA survey also stands out for usefully disaggregating "lack of vehicle access," and demonstrating that vehicle access is not the same as vehicle ownership. Over 70 percent of OCTA transit users had a car in their household, but the car was not available to them. In most instances it was being used by someone else, but 19 percent of current riders were unable to drive, and another eight percent reported having a vehicle that was not working (True North Research 2015). People in households with vehicles can still lack

[8] Note that 2/3 of people without vehicle access still did not use transit regularly.

vehicle access. If a household has more adults than vehicles, and if most adults move around on most days, then someone is without a car, and the odds of using public transportation rise.

We emphasize again, however, that most people simply do not use public transportation very often. The four panels of Figure 10 use 2012 CHTS data to divide the California, Southern California, and LA County populations into three groups: *Transit Commuters* (respondents who use transit for the journey to work); *Transit Non-Commuters* (respondents who used transit in the week prior to the survey but do not use transit for the journey to work); and *Infrequent Transit Users* (respondents who do not use transit for the journey to work and did not use it in the previous week).

In general, and unsurprisingly, transit use is more intensive in the SCAG region than in California, and more intensive in LA County than in the SCAG region. Beyond this difference, the patterns relating to these three types of users are generally consistent across the three geographies. *Transit Commuters*, who garner perhaps the most attention from public officials and transit planners, ride most frequently (44 to 49 trips per month), but are a very small share (2% to 3%) of the population; as a result, they account for just 25 percent to 30 percent of all transit trips taken, despite their frequent use. *Transit Non-Commuters* ride transit less frequently (11 to 16 trips per month) than *Transit Commuters,* but account for a much larger share (20% to 23%) of the population, and as a result they actually account for over half (54% to 57%) of all transit trips. Finally, *Infrequent Transit Users* ride little or not at all, averaging only 0.9 to 1.5 trips per month across the three geographies. This group, however, comprises about three-quarters (73% to 78%) of the population, and because of this large base, *Infrequent Transit Users* account for better than one in seven (16% to 18%) of all transit trips.

Figure 10. Mean and total daily trips by transit user group for the SCAG region, California, Los Angeles County, and non-Los Angeles SCAG region.

This snapshot of transit users is a picture of asymmetry, and this asymmetry suggests how transit ridership can fall dramatically and seemingly suddenly. The people who ride transit regularly are a narrow segment of the population. They come disproportionately from households with two or more adults per available vehicle, and especially from households with no vehicles. They have lower incomes, on average, and are more likely immigrants, young adults, and African-American or Latino. Many of them do *not* ride transit to or from work; transit commuters are just three percent of the population, and 13 percent of regular transit riders. The transit industry is thus heavily-dependent on a small subset of people, and very sensitive to even small changes in how those people choose to move around.

EXAMINING SOUTHERN CALIFORNIA'S DECLINE IN TRANSIT USE

Transit ridership can fall for multiple reasons. For convenience we divide these reasons into two categories: factors that transit operators (funding permitting) can control, and factors they cannot. We take these up in turn.

Factors Within Transit Operators' Control

The Quantity and Quality of Transit Service

People will ride transit less if service is slow, infrequent, or unreliable, and/or if rides are difficult or dangerous to take. As the quantity or quality of service falls, ridership should fall as well.

The Quantity of Transit Service

Some observers contend that recent drops in transit ridership can be tied directly to declining service quantity. For example, Hertz (2015) ties falling transit ridership to cuts in bus service, and articles in both the Wall Street Journal (Harrison, 2017) and New York Times(Rosenthal, Fitzsimmons, & LaForgia, 2017) make similar arguments. Freemark (2017) argues that LA's declining bus ridership is a function of Metro's falling service levels, and observes that average bus speeds fell 13 percent between 2005 and 2013.

Service levels certainly have a strong influence on ridership, even controlling for reverse causality – the fact that places with more riders often add more service (Alam, Nixon, & Zhang, 2015; Taylor, Miller, Iseki, & Fink, 2009). But service levels can be measured in many ways; two of the most common metrics are vehicle revenue miles (VRMs) and vehicle revenue hours (VRHs). VRM measures the distance transit vehicles cover while in service, while VRH measures the amount of time vehicles are in service. Both Hertz (2015) and Harrison (2017), in relating falling ridership to service declines, measure service using VRM. VRM alone, however, can be a problematic measure of transit service. In practical terms, VRM differentiates faster, longer-distance commuter services from lower speed local service. VRH, in contrast, measures the supply of different kinds of services (local bus service, bus rapid transit, rail transit, express bus, commuter rail, etc.) more similarly. VRH differentiates less among modes and service area types because the time between stops often varies far less than the distance travelled between them. A dozen stops spaced far apart in uncongested outlying suburbs can take a similar amount of time to serve as a dozen closely-spaced stops in a congested urban environment. The miles covered on the two routes will vary greatly, but the time required to serve them may not.

As a result, falling VRM *can* indicate service cuts, but can also reflect transit vehicles operating in higher levels of congestion, or agencies increasing local service rather than express service, or agencies redirecting service from outlying areas to central areas.

For example, if a transit agency shifts service from outlying suburban routes that travel longer distances at higher speeds to shorter, slower urban routes, VRM would almost certainly fall, as would average speed. But VRH may not change. Vehicles moved to dense areas typically cover less ground, but also move more slowly, stop more frequently, and dwell longer at each stop to allow more people to board and alight. In this case a "cut" in VRM would not necessarily be associated with a cut in VRH, and could actually deliver more service to more people.

In short, falling VRM is hard to interpret without also examining VRH. If VRM and VRH fall at roughly the same rate, then service is likely falling absolutely. But VRM falling substantially more than VRH suggests a change in service deployment or operating conditions (such as worsening congestion), rather than a service cut.

With this as background, we can consider the SCAG region's recent trends in VRM and VRH; we will show that rates of change in VRM and VRH have generally not been in concert. Figure 11 shows the relative trends in total VRM for the US, California, the SCAG region, and the SCAG region excluding LA Metro or OCTA between 2000 and 2016.

While VRM has increased across all four geographies, it has grown faster in the SCAG region than the U.S. or California as a whole, and faster still among SCAG's smaller transit operators – suggesting a relative shift in service delivery from LA Metro and OCTA to the smaller operators.

Figure 11. Indexed vehicle revenue miles. *Growth in service in the SCAG region outpaces national and state trends; within the SCAG region, all other operators have collectively added service at a faster rate than LA MTA or OCTA.*

This pattern is confirmed if we examine absolute VRM trends in the SCAG region separately for LA Metro, OCTA, and the remaining SCAG operators (Figure 12). Overall transit VRM has been growing for all three groups, but growing faster at the smaller operators.

Figure 12. Vehicle revenue miles. *Service levels for LA MTA matches aggregate service provision for all other operators in the region (minus OCTA). Service is growing faster in the SCAG area excluding LA MTA and OCTA than at LA MTA or OCTA.*

While VRM rose in the aggregate from 2000 and 2016, it has not been climbing for all modes. Figure 13 shows the roller coaster that has been the VRM trend for local bus service over this period: Significant growth between 2000 and 2005, little change between 2005 and 2009, a steep drop between 2009 and 2013, and slow growth from 2014 to 2016. Rail service, in contrast, has been steadily rising, especially light rail (Figure 14).

Figure 13. SCAG region: VRM for bus. *Service in miles traveled dropped by 15% between 2007 and 2013. Service has increased since. Hours of service has also declined, but not as rapidly as miles of service, indicating that service is cut on suburban bus lines.*

Figure 14. SCAG region: VRM for rail. *Substantial service increases for all commuter and light rail since 2000.*

If we examine service hours (VRH), we see similar aggregate trends. VRH rose from 2000 to 2009 in the US, California, and the SCAG region, fell from 2009 to 2011 during the Great Recession, and then climbed again across all three geographies through 2016 (Figure 15).

Figure 15. Indexed vehicle revenue hours. *Growth in service in the SCAG region outpaces national and state trends.*

Figure 16 shows the percent change in vehicle revenue hours over two time periods – 2005 to 2016 and 2010 to 2016 – across three geographies (US, California, SCAG region) and across four types of SCAG-region transit operators (Largest, Large, Medium, and Small). The figure shows that VRH increased during both time periods across all three geographies and all four operator types. It also shows, however, that VRH grew least among the largest operators that have lost the most riders, while it increased much more among the smaller operators.

Figure 16. Changes in indexed vehicle revenue hours by region and SCAG transit operator size: 2005-2016 & 2010-2016. *Service growth among the largest SCAG operators was lower than national, state, or regional averages, and much small than smaller SCAG-region operators.*

Finally, Figures 17 and 18 show the absolute and relative changes in VRM and VRH by mode between 2010 and 2016.[9] The figures show substantial overall shifts in service among modes, with local bus, rapid bus and demand response taxi service declining, while rail, commuter bus, and vanpool service increased. In absolute terms, local and rapid bus service declined most, while commuter bus and vanpool grew most; in relative terms, rail transit grew most while demand response fell most.

[9] Note that because Figure 17 shows absolute changes in both VRM and VRH on the same Y-axis, the VRM changes appear to be substantially larger than the proportional differences shown in Figure 16. These apparently large differences are mostly an artifact of transit service moving anywhere from about 6 (for the slowest urban bus service) to 40 (for the fastest commuter rail service) miles per hour, on average. This means that, for example, a one million VRH increase might be expected to have a corresponding 10 million or more VRM increase.

Figure 17. Percent change in service (hours and miles) by mode: SCAG region 2010-2016. *Rail and vanpool have largest % gains, and service is added in the urban core, rather than to outlying areas. Bus service hours were slightly reduced, and came from outlying areas.*

Figure 18. Change in service (hours and miles) by mode: SCAG region 2010-2016. *A 9% reduction in bus service miles is equivalent to 16.5 million bus service miles cut. Vanpool had the most service miles added, reflecting the longer commutes that vanpool serves.*

Overall, these shifts in service provision reflect both the choices and mandates of public policy. For better than three decades Southern California, and Los Angeles County in particular, has chosen to invest heavily in new rail services. As these new services have come on line, they account for a growing share of the region's transit service. Second, federal civil rights legislation, in the form of the Americans with Disabilities Act, has mandated the delivery of both accessible and demand-response transportation services to a growing and aging population. In combination, these choices and mandates have shifted transit service away from buses and toward rail and van services.[10]

What do these changes in transit service supply mean for transit patronage? First, Figure 19 shows the trends per capita VRH and per capita transit boardings over the past quarter century in the SCAG region. Transit service supply has been mostly climbing in the SCAG region for better than a quarter century, while transit use has never reached the 1991 levels. Given this, there is no *prima facie* case that faltering transit service supply is driving down patronage.

Source: NTD, 1991-2016; US Census Intercensal Monthly Population Estimates, 1991-2016

Figure 19. Transit trips and transit supply (1991-2016). *Per capita transit supply has increased 34% since 1991, while per capita transit use has not changed much.*

[10] Though not directly relevant to our question, these shifts have significant budgetary implications beyond just the deployment of various services (Taylor, Garrett, & Iseki, 2000). Local bus and bus rapid transit services (with the exception of those operating in exclusive rights-of-way) tend to be the cheapest to deliver and require the smallest per passenger subsidies. By contrast, the annualized capital plus operating expenses of rail transit tend to be substantially greater per passenger, while the per passenger subsidies for ADA demand response services tend to be the highest of all.

As a final way to examine the relationship between service levels and ridership, we examine the shifts between modes that occurred within the region's largest transit operator, LA Metro. Doing so allows us to address the possibility that aggregate increases in services are masking drops in those types of services— such as buses— that most transit riders rely on. The figures below show the indexed trends in boardings, service (VRH), and productivity (boardings/VRH) for LA Metro bus (Figure 20) and rail (Figure 21) service from 2000 to 2016, and demand response service (Figure 22) since 2008. For local bus and BRT service, transit service supply has tended to follow, rather than lead, changes in ridership — at least through 2014. Beginning in 2014, bus service rose slightly while boardings plunged. Rail service, not surprisingly, has increased more than 150 percent since 2000, and ridership has increased as well, though more slowly. Both service and patronage have tailed off since 2014, but largely in concert— there is no obvious sign of one leading the other. Finally, demand response and van service supply has grown steadily since 2008; boardings increased steadily, albeit more slowly than service, through 2015. Over the past year, service continued to gradually climb, while patronage began to fall.

Collectively, these data offer little evidence that service cuts are driving away customers. Instead service expansion has been accompanied by less ridership, with the main result being lost productivity, particularly for rapidly expanding rail and van services. Rail and van productivity (measured as boardings per VRH) has eroded steadily since 2009, while the service effectiveness of local bus and BRT service began dropping later (and more precipitously) in 2014. Falling service does not seem to be the culprit for falling ridership; falling ridership, in concert with expanding service, is the culprit for falling productivity.

Figure 20. LA MTA: Indexed bus and BRT boardings, service, and productivity. *Declining ridership since 2007, with services' slow growth in the post-recession period leading to declining productivity.*

Figure 21. LA MTA: Indexed rail boardings, service, and productivity. *Light rail service doubles with the opening of the Expo Line. Boardings do increase, but slower than the amount of service added.*

Figure 22. LA MTA: Indexed demand response boardings, service, productivity.
Ridership more than doubled, while service increased by 2.8x.

The Quality of Transit Service

Even if transit quantity does not change, transit quality might. Transit quality has no specific definition, but we can divide it into speed, reliability, and experience. Speed measures how quickly transit vehicles move throughout the region. Reliability is a measure of on-time performance: Do vehicles arrive and depart when they are supposed to? Experience is a measure of how safe or comfortable people feeling during their transit journey, including the time they spend waiting for and transferring among their buses and trains.

Local bus and BRT service in the SCAG region has been slowing down over time. This slowdown is likely a result of many factors, including worsening congestion, shifts from faster suburban to slower urban service, shorter stop spacing, and longer stop "dwell" times to load and unload passengers. Whatever the underlying causes, region-wide bus vehicle speeds declined five percent between 2000 and 2010, and another eight percent between 2010 and 2016, for a total drop in speed of nearly 13 percent over 16 years. By comparison, rail transit speeds were down only two percent between 2000 and 2016.

Falling speeds slow travel times, and if operators do not counteract falling speed by adding more vehicles, then headways (the time between vehicle arrivals at a stop) will rise. Rising headways make transit less attractive by increasing average wait times at stops and lengthening the times of transfers among vehicles. Research has shown that transit passengers find waiting for busses and trains to be especially burdensome, so increased headways can undermine the quality of transit service even if the quantity (in terms of vehicle revenue hours of service) stays unchanged (Iseki & Taylor, 2009).

The SCAG region has 41 transit agencies that operate fixed-route general public service, and on-time performance naturally varies across them.[11] Measuring reliability for all or even most of these operators is therefore beyond the scope of this report. We can, however, examine reliability for LA Metro, which again accounts for the lion's share of the SCAG region's transit trips and lost trips.

Historically, Metro has been unreliable relative to other large transit agencies. A 2008 study by the agency showed that compared to 9 peer operators, Metro had both a lower on-time target and a lower on-time percentage (a vehicle is considered "on-time" if it is less than 5 minutes late). Metro aimed to have 70 percent of its vehicles arrive on time, and attained a rate of 63 percent. In comparison, New York attempted an 83 percent on-time rate and attained an 82 percent rate (Flowers & Snoble, 2008). Metro's reliability problems occur almost entirely on buses, which can easily become trapped in congestion (and which, of course, can also exacerbate congestion).

In the intervening years, however, Metro's on-time performance appears to have improved substantially. An analysis of Metro data by local reporters (Mendelson, 2015) suggests that from 2010 to 2015 Metro rail maintained a 99 percent on-time rate (with subways being late 1 stop out of 200, and light rail 1 stop out of 50), while the buses improved their on-time rate to 81 percent. We say "appears" because this discussion comes with an important caveat: Reliability is a function of the conditions in which buses and trains operate, the efficacy of the bus and train operations, and the schedule that sets the performance expectations. Controlling for conditions or operations, schedules that assume few traffic disruptions and little layover or recovery times can be difficult to meet, while those that assume slower speeds and provide generous layover and recovery times at the ends of routes are easier to meet.

As a result, transit operators can improve measured reliability in two ways. The first involves steps like better field supervision, quicker boarding and alighting procedures that reduce dwell times, and giving buses their own lanes in chronically congested districts. All these steps can change operations, and lower the variability of travel times. But the second way to improve reliability is to change the schedule, by factoring in more slack. Doing so is not necessarily disingenuous, and may simply reflect the challenges of operating in heavy congestion. Adding slack to schedules can allow vehicles to maintain performance even in the face of disruptions (severe congestion, crashes, crowds of people boarding or alighting at particular stops, and so on). The downside to this approach, however, is that too much slack in the schedule might increase reliability on paper but manifest as poorer-quality service in the eyes of riders. As slack increases average vehicle speeds fall, headways rise, and so do timepoint holds (instances where vehicles wait at stops so as not to run ahead of schedule). A service that is on-time because its schedule makes it less frequent is not a high-quality service.

We could not, with the data and time available to us, determine if Metro's schedule adherence improved because its buses met the existing schedule more often, or because schedules themselves were changed. If bus performance improved on the street as opposed to on paper, then we would have little reason to think service reliability was a large factor in falling ridership – bus ridership would have fallen even as schedule adherence increased. But we cannot say for certain that this occurred. We do know, however,

[11] With another 69 systems operating demand-response and other types of transit services, for a total of 110 regional transit service providers.

that rail ridership fell even as rail maintained a near-perfect on-time record. So we have some reason to think that service reliability did not play a large role in the ridership downturn.

We should also note that the advent of mobile apps that track transit vehicles in real time may have diminished the problems caused by unreliable buses. Unreliability is a larger problem when it strands people at stops with little idea of when a vehicle will arrive. To the extent people can follow vehicles in real time and adjust their departures to minimize waiting, some of the worst aspects of irregular transit vehicle arrivals can be mitigated (Yoh et al., 2011). LA Metro has next bus and next train information at its rail stations and BRT stops, and real time information about local and express buses is available on multiple smartphone applications. Metro's 2016 rider survey shows that 51 percent of bus riders have a smartphone, and that 66 percent of these riders use the phone "very often" or "occasionally" to get information about Metro rides.

A transit vehicle that arrives on time can still have poor service quality, if the experience of using the vehicle – which includes walking to the stop, waiting at the stop, and riding – is unpleasant. Specifically, if people using transit feel unsafe or uncomfortable, ridership could fall (Delbosc & Currie, 2012; Iseki & Taylor, 2009). Safety perceptions are often gendered (Loukaitou-Sideris, 2015), and a slight majority of transit users in the SCAG region are women. Note that perceptions of safety are different from, and probably more important than, safety itself. Many behaviors that are not crimes, and that do not directly threaten other people, may nevertheless disturb people nearby, and can discourage them from using transit (Ellickson, 1996; Fink, 2012).

There is some reason to think that transit vehicles, stations, and stops in the SCAG region – and particularly along LA Metro routes – came to feel less safe to riders in recent years. In 2016, LA Metro surveyed former riders, and 28 percent said that the primary reason they stopped riding transit was that they felt either unsafe or uncomfortable. Unfortunately, this survey is not conclusive. Former transit riders are a hard group to reach, and there are responses in the survey that suggest that the overall sample may not have been representative. As a result, we cannot be certain that safety actually loomed so large for former riders. At the same time, even if the survey inflated safety concerns by a factor of two, a nontrivial share of former riders (14 percent) report leaving transit because they felt unsafe. And considerable anecdotal evidence suggests that in recent years transit users started to feel less safe — such reports prompted Metro to completely revamp its security procedures in 2017.

What might explain riders' perceptions that transit is less safe? Possibly some riders have *always* felt unsafe, and what changed was not conditions on transit but the option to leave (if people got access to vehicles or TNCs, for example). We do not discount this possibility, but will take it up later in this report. If we assume that perceptions of safety really did decline in recent years, one potential (and admittedly speculative) reason involves LA County's dramatic increase in homelessness after 2010. Table 2 shows changes in the LA County homeless population from 2005 to 2017, based on homeless counts done by the Los Angeles County Housing Services Administration. Homeless counts, and especially counts of the unsheltered homeless, are for obvious reasons prone to error. Nevertheless, the table suggests that homelessness, while not as severe today as it was in 2005, has in recent years both risen sharply and changed in composition. The unsheltered chronic homeless (people who are not just homeless but also have some sort of disabling condition) became a larger proportion of the homeless overall.

Year	All Homeless		Share	Chronic Homeless		Share
	Total	Unsheltered	Unsheltered	Total	Unsheltered	Unsheltered
2005	65,287	53,429	81.8%

Table 2. Changes in LA County homeless population, 2005-2017.

Homelessness— the simple condition of people being without housing— often arises from high housing prices that push some people out of the housing market (O'Flaherty, 1998). Chronic homelessness, however, which tends to be much more visible (in part because the chronic homeless are less likely to be sheltered) often has different underlying causes related to addiction or mental illness. In conversations with transit operators during the writing of this report, some mentioned the impact of California's prison realignment program, which led to many inmates being released from prisons and jails. The state's carceral institutions have traditionally held many mentally ill persons, and discharging them without any corresponding increase in other social services may have increased the number of people with addictions and disabilities living on the streets. No government entity tracks prison realignment's impact on homelessness, but some advocates estimate that up to 20 percent of the state prisoners discharged, and up to 10 percent of county jail inmates, have now become homeless(Holland, 2015). There is also small body of evidence, some academic and some journalistic, suggesting that the unsheltered homeless gather disproportionately around transit facilities. Transit vehicles can provide shelter and protection, while transit stops can provide a roof or even just a bench (Emmons, 2013; National Academies of Sciences, Engineering, and Medicine, Transportation Research Board, Transit Cooperative Research Program, & Boyle, 2016; Trevor, n.d.; Voorhees Center for Neighborhood and Community Improvement, 2016). To the extent some of these people use transit stops and transit vehicles as ad hoc shelters, and to the extent their presence or behavior disturbs others, realignment may have played a role in making transit seem less safe, and reducing ridership. We emphasize again that this line of thinking is quite speculative and warrants further research.

Transit Fares

Potential transit riders weigh the quality of a ride against its price. Like most goods, transit, even at constant quality, will become less attractive if its price rises, and more attractive if the price falls. The postwar high-water mark for transit in Los Angeles County occurred during a three-year program that cut bus fares in half from 1982 to 1985. When this program ended and bus fares returned to their previous levels, transit ridership fell substantially (Southern California Rapid Transit District, 1986).

The inverse relationship between fares and use, however, is complicated by two factors. First, the people who use transit the most – lower-income people with limited or no vehicle access – are generally more price sensitive in that they have less income, but *less* price sensitive in that they have few viable alternatives to transit. As a result, many transit riders are less sensitive to fare increases than one might expect given their incomes. Second, although every transit operator has a posted one-way fare, relatively few riders actually pay that rate, because agencies offer a variety of discounts and bulk payment mechanisms, including daily, weekly or monthly passes, youth and elderly discount passes, and so on that offer substantial discounts to particular classes of riders, including those who ride frequently (Yoh, Taylor, & Gahbauer, 2016). Heavy users who buy monthly passes will typically pay a per-ride rate much lower than the advertised fare. LA Metro's 2016 rider survey showed nearly half (49%) used a daily, weekly, or monthly pass, while about 25 percent paid a discounted fare.

Further complicating this issue is that transit fares can be calculated on a per-trip or per-mile basis. Arguably the most intuitive way to think about fare increases is per-trip: How much does a person pay to get aboard a vehicle? But once a passenger is on board, what follows might be a local bus trip of two blocks or a light rail trip of 22 miles. With the exception of commuter rail and some express bus routes, transit fares generally do not change with distance travelled. If the average fare to board a vehicle rises less quickly than the average distance of a trip, the per-mile fare could fall more than the per-trip fare rises, and transit may in a real sense become less expensive. For our purposes, the fare per trip is probably more relevant, as it is likely more salient to potential riders, but it remains worthwhile to consider both.

This wide array of payment methods and rates, and ways of considering these rates, makes calculating the actual fare paid by different classes of users beyond the scope of this report. We can, however, easily determine the average fare paid per boarding for a given system and the SCAG region, by simply dividing total fare revenues collected by either total boardings or passenger miles. While these metrics will fail to capture some of the nuances of fare payment among different types of users (they cannot completely control, for instance, the bulk discounts for heavy users of different lines) they are a measure of the fare payments actually made by people when they ride.

Figure 23 below displays the average inflation-adjusted fare paid per boarding across all transit systems in the US, California, and the SCAG region between 2002 and 2015. The figure shows, first, that the average transit fare paid is lower in the SCAG region than for California as a whole, which in turn is lower than the average transit fare paid nationwide. Second, the figure shows that the average inflation-adjusted fare paid per boarding in California began creeping up in 2012, and to a lesser extent in the US since 2013 and the SCAG region since 2015. Overall, however, the average inflation-adjusted fare per boarding in the SCAG region has been remarkably flat since 2002.

Figure 23. Average fare per boarding in 2015 dollars. *Average fare per boarding has stayed relatively constant in the SCAG region.*

National, state, and regional averages, of course, can mask considerable variation in fares paid across transit systems, services, and riders. Figure 24 shows the same inflation-adjusted trend in fares paid per boarding since 2002 for each of the six largest transit operators in the SCAG region. Focusing on these larger operators tells a different story. With the exception of Long Beach Transit, inflation-adjusted fare payments have been increasing over time on these operators. In particular, inflation-adjusted fares per boarding at both OCTA and the Big Blue Bus increased by about 50 percent between 2002 and 2016 — to nearly $1.25 and $0.75 per boarding respectively. Foothill transit had (in 2016) the highest average fares paid (at $1.25 per boarding), followed in order by OCTA, LA MTA, the Big Blue Bus and Long Beach Transit, while LA DOT had the lowest average fare paid (at just over $0.50 per boarding).

Figure 24. SCAG: Average fare per boarding for largest operators in 2015 dollars.
Inflation-adjusted average fares per boarding have increased the most rapidly for OCTA and LADOT.

Figure 25 shows the 14-year trend in real average fare paid per mile for the nation, California, and the SCAG region. Here we see that average fares paid per mile have remained largely unchanged in the U.S. and California, and in the SCAG region they have actually fallen. Despite being lower than average per mile fares in the state and nation, average per mile fares in the SCAG region have declined about 20 percent since 2009.

Figure 25. Average fare per passenger mile traveled in 2015 dollars. *Average fare per PMT remained fairly constant, and even declined a little since 2009.*

Figure 26. SCAG: Average fare per PMT for largest operators in 2015 dollars. *Average fare per PMT increased the most rapidly (about $0.07 per mile) for LADOT and slightly for OCTA ($0.04 per mile).*

If we zoom in on the six largest transit operators in the SCAG region, we see that inflation-adjusted fares per mile rose notably at two systems — LA DOT (+$0.07/mile) and OCTA (+$0.04/mile). On the Big Blue Bus and Foothill Transit per mile fares rose modestly, and at Long Beach Transit and LA Metro they fell (despite Metro's 2014 fare increase).

The most notable attribute of the figures above is the steep increase in fares for OCTA. OCTA's fares have risen over 50 percent since 2002, and OCTA is also the transit operator that has suffered the sharpest decline in ridership (about 35% since 2007). The transit industry's rule of thumb (sometimes called the Simpson-Curtin rule) suggests that a 10 percent increase in fares will be associated with about a 3 percent reduction in ridership. By this heuristic, OCTA's fare increases should have resulted in a 17 percent ridership decline.

To help isolate the association between fare increases and transit use, we estimated a multivariate regression statistical model using data for each transit operator in the SCAG region for each year between 2002 and 2016. Full details of this model are in the Appendix, but we used fixed effects to control for the panel nature of the data, and controlled for the level of service each operator provided, the average time between each bus or train arrival, and the density, size and population of the service area.

We find, after controlling for these factors, that higher fares are indeed associated with lower ridership, but by less than industry rules of thumb might suggest. Across the SCAG region over this time period, a 10 percent fare increase was associated with a roughly 1.6 percent decrease in ridership. This relationship is relatively "inelastic" (i.e. it suggests people are not very sensitive to prices) though it falls within the range of findings from other studies of how fare increases influence ridership (Cervero, 1990; Linsalata & Pham, 1991). Based on these results, we would expect OCTA patronage to have fallen about 8 percent since 2002, as a result of its fare increases.

It seems plausible, in light of these data, to suggest that fare increases played some role in OCTA's lost transit trips. But OCTA's losses, as large as they are, account for a small fraction of the SCAG region's total losses. The bulk of those losses were from LA Metro, and it is harder to suggest that fare increases played a big role in Metro's ridership decline.

Factors Outside Transit Operators' Control

Fuel Prices

Fuel prices are a large and highly salient operating cost of driving. As fuel prices rise people drive less, and as they fall people drive more. In general, a ten percent increase in the price of gasoline is associated with a long-run (5 year) one to three percent reduction in vehicle travel (Goodwin, Dargay, & Hanly, 2004). Driving more, however, is not the same as using transit less, since (again) the typical driver almost never uses transit. People who drive less when gas prices are high often walk, carpool, stay home, or drive to nearer destinations (e.g. a restaurant that is 2 miles away instead of 10). Similarly, for many regular transit riders changes in the price of gasoline are immaterial, because many transit users do not have access to private vehicles. As a result of these factors, much of the adjustment to fluctuating fuel gas prices that occurs in the U.S. has no bearing on transit use, and the relationship between fuel prices and transit ridership tends to be weaker than the relationship between fuel prices and driving.

"Weaker," however, is not "nonexistent," and in both Southern California and nationwide, fuel prices rose and fell sharply from the late 1990s through 2015. Prices increased at a record pace from 1998 to 2008, declined, and then rose sharply again until 2013, after which they plunged (Figure 27). Transit ridership also fell steeply from 2013 to 2016. It is reasonable to think that falling gas prices could contribute to falling transit ridership. A steep drop in gas prices could have lured some of the minority of transit riders who do have vehicles away from transit use. Even among riders without vehicles available, falling fuel prices could have an indirect impact. When fuel is cheap rides in cars become more available: Friends or family members who become more likely to drive, and people who might otherwise have used transit might start carpooling for some trips.

Figure 27. Average gas per gallon in 2015 dollars.

As to how much a steep drop in fuel prices might undermine transit use: the research literature reports a fairly wide array of elasticities (estimates of transit's sensitivity to gas price changes). These range from relatively large effects for commuter rail (0.37, when gasoline costs more than $3 per gallon) (Nowak & Savage, 2013) to much lower average estimates for bus ridership that range from -0.05 to 0.22 (Blanchard, 2009; Iseki & Ali, 2014; Mattson, 2008). Blanchard (2009) used gas price changes in LA County to estimate a bus ridership elasticity of 0.092, a subway elasticity of 0.011, a commuter rail elasticity of 0.126, and light rail elasticity of 0.071. Lane (2010), also studying LA, found similar results. All these estimates suggest that a 10 percent change in fuel prices is associated with about a half-percent change in transit use in the near term, and a 1 to 1.8 percent change in the longer-term. Gas prices fell 30 percent from 2012 to 2016,

which would imply a 3 percent reduction in bus ridership, and larger losses in rail and commuter rail, all else equal.

One way to consider this relationship of fuels prices to fares is to compare the ratio of average fare paid per boarding with the average price of gasoline in the SCAG region over this period (Figure 28). As with fares generally, we see that this fares-to-gas ratio is lower in the SCAG region than in California as a whole, and lower in California than the nation as a whole. Further, while the price of a transit trip relative to a gallon of gas has been climbing across all three geographies since about 2012, the ratio in the SCAG region today remains substantially lower than it was in 2002.

Note: Average LA gas prices are used for the SCAG region.

Figure 28. Average fare as a percent of region's average gas per gallon. *Average fare is consistently less than the cost of a gallon of gas, even as gas prices have been falling since 2014.*

Figure 29 plots the trend in gas prices against the trend in absolute and per capita transit ridership in the SCAG region (we use the Los Angeles Metropolitan Statistical Area average gas prices). The graph suggests a real but fairly modest relationship: Transit use does rise and fall with fuel prices, with a small lag. The response does not appear to be large, however, especially for ridership per capita. But with only one data point per year, we can only say so much about the role of gasoline prices. It would be surprising if falling gas prices did not contribute to the decline in transit ridership, but it is difficult to quantify their precise role. Overall, we consider falling fuel prices to be a real but probably minor driver in falling transit use.

Figure 29. Transit ridership and gas prices in Los Angeles.

The Transportation Network Companies

The large absolute decline in transit ridership coincided not just with falling gas prices but also with the rise of Transportation Network Companies (TNC) like Lyft and Uber. TNCs are a plausible culprit in transit's decline. TNCs can offer the convenience of automobile travel to people who do not own automobiles, and could therefore become viable substitutes for public transportation. Any explanation for falling transit use that hinges on TNCs, however, faces a timing problem: TNCs began operating in Southern California in 2009, and did not begin serving people in large numbers until 2012. Per capita transit ridership began falling in 2007. So while the TNCs may affect transit use, they cannot by themselves explain transit's recent patronage decline.

Moreover, TNCs' influence on mode choice is theoretically ambiguous. On the one hand, TNCs let people purchase vehicle trips *a la carte*. If those trips are inexpensive, then TNCs can be a faster, more direct, less-crowded, and more comfortable substitute for transit. While some TNC trips are substantially more expensive than transit fares, the TNC shared ride services, like Lyft Line and Uber Pool, have sometimes seen fares fall low enough to be competitive with one-way transit fares. Given the speed and convenience these services offer, they could draw some riders away from transit, provided those riders have smartphones and credit cards.

On the other hand, TNCs could also *increase* transit use. TNCs could help solve first-mile/last mile problems, and get people to transit stops that are beyond walking distance. TNCs could also provide transit riders a form of insurance – if some people don't take transit because they worry an emergency might arise where they need a car (for instance, getting a sick child home from school) the option of calling

a TNC during one of those emergencies can lower the perceived risk of taking public transportation, and make it more attractive.

Finally, since most people in most regions do not use transit or even consider doing so, the average TNC trip may have little impact on transit ridership. If the typical Uber passenger has never used a bus and never considered doing so, Uber's growth cannot be blamed for transit's decline.

Because TNCs provide almost no operating data to the public, we do not have sufficient evidence to adjudicate between these scenarios. We do not know even basic information — such as the total number of TNC trips in the SCAG region year over year, or the general areas where those trips originate — that could cast light on the relationship between TNCs and public transportation (Transportation Research Board, & National Academies of Sciences, Engineering, and Medicine, 2016).[12]

What little evidence we do have suggests that most TNC trips do not replace transit trips. Surveys done by independent researchers and organizations suggest that the typical TNC user does not resemble the typical transit rider (TNC users are disproportionately college-educated and affluent), and that the most common times and places for TNC rides are Friday and Saturday nights in popular commercial districts, and trips to airports (Clewlow & Mishra, 2017; Feigon & Murphy, 2016; Rayle, Dai, Chan, Cervero, & Shaheen, 2016). Large surveys by Clewlow and Mishra (2017) and APTA (Murphy 2016) suggest that most TNC trips occur between 10 p.m. and 4 a.m., when transit runs infrequently and carries few riders. Clewlow and Mishra (2017) find that the majority of TNC users report no change in their use of other modes. All this evidence suggests little impact on transit.

The caveat attached to these findings, however, is that the subgroups most likely to take transit – low-income racial and ethnic minorities – are also difficult to survey. Even very large, well-funded surveys often struggle to get adequate coverage of poorer households. As such, we cannot rule out the possibility that actual TNC use in some poorer neighborhoods is higher than the current data suggest.

Moreover, as the pool of TNC users continues to expand, the TNCs' effect on transit use – both positive and negative – may well increase. These amplified effects will be still more likely if TNC prices fall, and TNC use grows disproportionately in dense, high transit ridership areas populated by residents with relatively low levels of household motor vehicle access. For this reason, the relationship between TNCs and transit should be monitored, and there may well be a public interest in letting transit agencies see at least basic data about the location and volume of TNC trips. But relatively little evidence suggests that TNCs are a big player in the current transit decline. The timing, again, does not match up well.

Neighborhood Change and Migration

Transit is heavily-supplied in a small proportion of places, and heavily used by a small proportion of people. This situation creates a potential matching problem. If the small group of people who use transit a lot becomes less likely to live in the small number of places that offers a lot of service, transit use could

[12] TNCs are required under California law to report a host of data on rides given, disability access, and drivers to the California Public Utilities Commission. Unlike transit data in the NTD, however, these TNC data are not public. The CPUC cannot easily turn those data over to the public or public agencies. Such conditions are common throughout the United States. For more - http://www.cpuc.ca.gov/General.aspx?id=3989

fall. Such a mismatch could occur for a number of reasons. The highest-profile explanation is gentrification-driven displacement. If gentrification pushes transit-riding lower-income households away from transit-rich neighborhoods, and replaces them with higher-income residents, transit use may fall. The new higher-income residents may use transit more than they did previously, but less than the lower-income residents they replace (Dominie, 2012).[13]

Gentrification and displacement, however, account for only a small portion of moves by poor and immigrant households. Most moves by such households are by choice, or for reasons unrelated to in-migration by the affluent—for example, a low-income resident might lose a job and be forced to move (either to find new work, or to find a place with lower rent), even if neighborhood rents are not rising (Freeman 2005; Freeman and Braconi 2004; Newman and Wyly 2006; Vigdor 2002). The relevant fact is that in recent years many poor households, when they move for whatever reason, relocate to the suburbs. As poor households suburbanize, they move farther from transit on average (Farrell, 2016; Kneebone, 2014; Kneebone & Garr, 2010; Singer, 2011; Zimmerman, Restrepo, Kates, & Joseph, 2015). Upon arriving in the suburbs, low-income people may well use transit more than other suburbanites, but less than they had used it when they lived in central-city neighborhoods. If they are not replaced in central-city neighborhoods by other people who ride at high rates, then as a result of their migration overall transit use could fall.

Ideally we could examine the extent to which migration influences transit use by following low-income households and their travel behavior over time and across neighborhoods. Unfortunately, the data that would allow us do this do not exist. What we can do instead is use census-tract level data to examine changes in the spatial location of transit commuters and in the characteristics of residents living in high-transit commuting neighborhoods. We approach this task in two ways: identifying tracts with transit-friendly built environments and seeing how they change over time, and identifying tracts with high levels of transit commuting, and examining change within those places over time. These approaches have limits, as we will explain, but in combination they show a decline in the number of transit commuters in many high-transit use neighborhoods in 2010 and 2015, a decline in transit mode share in these neighborhoods (particularly from 2000 to 2010), and a shift in the characteristics of neighborhood residents in ways that help to explain declining transit use.

We have two methods available to identify areas that are highly conducive to transit use. These are areas that, regardless of who lives in them, are transit-friendly, either because of their levels of transit service or attributes of their built environment. Our first measure of transit-conduciveness is SCAG's High Quality Transit Area designation. SCAG defines a High Quality Transit Area as an area within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses arrive at a frequency of every 15 minutes or less during peak commuting hours. SCAG last identified existing High Quality Transit Areas using data for 2012. These High Quality Transit Areas are located in 762 census tracts—about 45 percent of the region's total Census tracts.

Our second measure of transit-conduciveness comes from a typology of neighborhoods developed at the UCLA Institute of Transportation Studies for the US Federal Highway Administration (Voulgaris, Taylor, Blumenberg, Brown, & Ralph, 2016), using data from 2010-2013 (Ramsey & Bell, 2014; Voulgaris et al.,

[13] This outcome could well result in lower transit ridership but also lower VMT and GHG, because the higher income in-migrants are more likely to replace driving with their transit trips (see Chapple et al. 2016, Chapter 4).

2016). This typology characterizes neighborhoods based on their built environment and transportation system characteristics (e.g. density, land use mix, age of housing stock, resident turnover, street network characteristics, and transit supply), but not on the characteristics of the people living in these neighborhoods. In this way the typology can capture how transit-friendly a neighborhood's built environment is. We focus in particular on one neighborhood type called "Old Urban," which indicates very-high density neighborhoods with high-levels of transit supply. Old Urban neighborhoods are much less common than SCAG High Quality Transit Areas—in 2010 there were 719 Old Urban neighborhoods in the region.

For our purposes, the limitations of both the SCAG designation and the Old Urban designation are that the data used to construct them are from 2010 or after. As a result, we can track changes in these neighborhoods from 2010-2015, but we do not have a good measure of tract-level transit supply or transit-conduciveness from 2000 to 2010, the time period when transit use in the SCAG region began to fall.

To examine changes from 2000 forward, we examine the clustering of transit commuters. This method is imperfect, since as we have shown commuters are a minority of transit users, but we assume for this exercise that as regular transit users, commuters tend to cluster in areas conducive to transit use. This assumption is contestable, but we have no other Census tract-level data on transit use that stretches back to 2000. We identify high-transit commuter neighborhoods with data on transit commuters by Census tract from the 2000 Decennial Census, and the 2010 and 2015 ACS.[14] For each year, we rank order tracts by the number of transit commuters in them. As we discussed earlier, transit commuters are highly concentrated in a very small fraction of the SCAG region's land area; eighty percent of transit commuters live on less than five percent of the land area and in less than 40 percent of census tracts. This distribution changed very little from 2000 to 2015.

We examine changes over time using the rank-ordered transit commuting data from the 2000 Census. We identified the census tracts that most intensively host transit commuters; these tracts, which are 1.43 percent of all census tracts in the region and 0.02 percent of the region's land area, hold ten percent of the region's transit commuters. We call these "10% Tracts." The mean number of transit commuters in these tracts is almost 12 times the regional average. For comparison, we also extracted data on the tracts where the top 60 percent of transit commuters live; these neighborhoods comprise 20.6 percent of all census tracts and 0.86 percent of the land area. We call these "60% Tracts." The mean number of transit commuters in these neighborhoods is 4.5 times the regional average. The number of ten percent tracts is extremely small: in 2000, just 48. The number of tracts that hold 60 percent of the commuters, in contrast, is 743—roughly the same number as are in the Old Urban designation.

The tracts in the 10% and 60% designations in 2000 strongly overlap with the SCAG High Quality Transit Area and Old Urban designations. If we take the 10% Tracts in 2000 and follow them forward, we see that about 85 percent are Old Urban tracts, and all of them are SCAG High Quality Transit tracts. Similarly, of the tracts in the 60% designation in 2000, in 2010 55 percent of them are Old Urban, and 85 percent are

[14] Because we are using tract-level data, the ACS data are from the 5-year samples. The 2010 data are from the 2006-2010 ACS, and the 2015 data are from the 2011-2015 ACS.

High Quality Transit. As such, following the trajectory of the 10% and especially the 60% Tracts may be a rough-but-reasonable proxy for following the trajectory of transit-rich areas.

As a first step, we follow three of these four tract designations – 60% Tracts, Old Urban, and High Quality Transit – over time, to the extent we can. For the latter two designations, this means only tracking changes from 2000 to 2015. We follow the year 2000 60% Tracts from 2000 to 2010, and then to 2015. (We use the 60% Tracts, rather than the 10% Tracts, because their numbers are more comparable to the Old Urban tracts).

Figure 30 summarizes the results. Essentially, the 60% Tracts saw substantial changes between 2000 and 2010, and these changes are consistent with the idea that the people most likely to use transit migrated away from transit-rich areas. From 2000 to 2010, the poverty rate in these tracts fell by four percentage points, the share foreign born fell from 48 percentto 45 percent, and the share of households without vehicles fell from 23 percent to 17 percent. From 2010 to 2015, in contrast, relatively little changed, and that same pattern holds if we examine Old Urban tracts and SCAG High Quality Transit Areas. Across all three neighborhood typologies, poverty rose slightly, the share of foreign born fell slightly, and – perhaps most important, given the importance of vehicle access to transit use – the share of households without vehicles stayed at the point it had fallen to. (The same general pattern holds for the 10% Tracts, although to conserve space these are not shown in the figure).

Figure 30. Characteristics of high-transit areas, 2000, 2010, and 2015 (2000 Census tracts over time)

Some additional data also suggest neighborhoods changing in ways not conducive to transit use. Figure 31, for example, shows that in both the 10% and 60% Tracts the transit commute mode share fell between 2000 and 2015 (with most of the decline occurring between 2000 and 2010.) Although not shown graphically, Census data also indicate that in these tracts, both the number of workers and overall earnings for workers rose, but earnings did *not* rise for those commuters using transit to get to work.

Data sources: 2000 U.S. Census, 2010 and 2015 American Community Surveys

Figure 31. Mean transit commute mode share in high-transit neighborhoods, SCAG Region by year.

In summary, then, we observe changes in census tracts that in the year 2000 were most heavily-populated by transit commuters. These tracts, in turn, overlap substantially with tracts that we know in 2010 were rich in transit supply and/or had transit-friendly built environments, letting us infer (albeit with some uncertainty) that these neighborhoods were transit-rich in 2000 as well. Particularly between 2000 and 2010, in these neighborhoods we see falling transit commuting, falling population, a falling share of immigrants, falling poverty, more vehicle ownership, and higher earnings for workers overall but not those workers who commute via transit. All of this evidence is consonant with these neighborhoods becoming

more affluent, with that affluence being associated with less transit use, and with people left out of that affluence remaining on transit.

We emphasize that this story is far from conclusive. For the reasons we discussed above, the relationship between neighborhood change and transit use is very hard to measure. The data we have are consistent with neighborhood changes in the most transit-friendly SCAG-region neighborhoods contributing to falling transit use, but they are not conclusive. This is an area that warrants substantial further research.

Rising Vehicle Ownership

The defining attribute of regular transit riders is often a lack of vehicle access. Between 2000 and 2015, vehicle access in the SCAG region became much more common. Households in the SCAG region, and especially lower-income households, dramatically increased their levels of vehicle ownership. Census summary file data show that from 2000 to 2015, the SCAG region added 2.3 million people and 2.1 million household vehicles (or 0.95 vehicles per new resident). To put that growth in perspective, from 1990 to 2000 the region added 1.8 million people but only 456,000 household vehicles (0.25 vehicles per new resident). The growth of household vehicles in the last 15 years has been astonishing.

There are strong reasons to believe that this surge in vehicle ownership is largely responsible for the decline in transit use. A back of the envelope calculation can illustrate the magnitude of the problem this vehicle surge could pose for transit operators. Data from the US Consumer Expenditure Survey show that from 2000 to 2015, the average expenditure per household vehicle in LA County was about $3,729.[15] Since SCAG residents added 2.1 million vehicles in this time, a midrange estimate of private expenditures on household vehicle growth is $7.8 billion. Over the same period of time, LA Metro and Metrolink combined to spend about $6.4 billion opening new rail service, and about $7.4 billion on combined rail and Bus Rapid Transit service. Thus even a conservative estimate of private investment in vehicle growth shows it easily outpacing public investment in fixed-route, dedicated right-of-way transit— the type of transit that is supposed to be most competitive with driving. This level of increased vehicle ownership is in many ways incommensurate with robust transit use.

To be sure, much of this vehicle growth would not influence transit use. Because most SCAG residents had never used transit, increased vehicle ownership in most SCAG households would not contribute to transit's decline. The 2000s were when the Millennials, a demographically large cohort, reached ages when many would buy automobiles. Millennial car-buying could help explain the bulge in vehicle acquisition, but unless those Millennials would otherwise be on transit these additional vehicles would not necessarily explain falling transit use.

---

[15] The Consumer Expenditure Survey tracks the average net outlay per vehicle purchased. Data are not available for the other SCAG counties, but the average net outlays are probably similar across Southern California. Moreover, the $3,729 figure is the average of each annual average. Since more vehicles were purchased in the early to mid-2000s, and at higher prices, this figure likely underestimates the true average. See https://www.bls.gov/cex/csxmsa.htm

Some additional evidence, however, suggests that vehicle ownership did play a role in reducing ridership. When the OCTA surveyed its former riders in 2015, for example, 70 percent reported leaving transit because they had acquired a car (True North Research 2015).

Moreover, we have reason to think that the increase in vehicle ownership occurred disproportionately among populations that are more likely to take transit. Census data show that vehicle access increased most among lower-income households (we return to this point below, in Figure 40). Vehicle access also rose disproportionately among the foreign born. Table 4 shows changes in both zero-vehicle households and those with a vehicle "deficit" (that is, fewer vehicles than adults). Across the entire SCAG region, the share of households without vehicles fell 30 percent between 2000 and 2015, while the share of households with a vehicle deficit fell 14 percent. Among foreign-born households, these percent declines were larger — 42 percent and 22 percent — and among the foreign born from Mexico they were larger still. Among the foreign born from Mexico, the share of households without vehicles fell by two-thirds between 2000 and 2015, and the share with a vehicle deficit fell 28 percent. Thus car ownership rose across-the-board, but rose fastest among subgroups with a high propensity to ride transit. And these changes largely occurred between 2000 and 2010, which aligns with the timing of the transit downturn that began in 2007.

	All SCAG Share Households With:		Foreign Born Share Households With:		Mexican Foreign Born Share Households With:	
	No Vehicles	Vehicle Deficit	No Vehicles	Vehicle Deficit	No Vehicles	Vehicle Deficit
2000	10.2	30.1	14.1	47.1	15.7	57.2
2010	7.7	26.1	9.4	38.9	7.0	46.0
2015	7.1	25.9	8.2	36.6	5.4	41.6
Pct Change	-0.30	-0.14	-0.42	-0.22	-0.66	-0.27

Table 4. Vehicle ownership trends, SCAG region (US Census, Census IPUMs).

To refine our understanding of the association between vehicle ownership and transit use, we estimated a multivariate regression model. As a result of the data constraints we discussed earlier, this process involved two steps. Recall that our fundamental data obstacle was a mismatch between the availability of detailed, person-level information about travel behavior and our need to answer a question about changes over time. The CHTS provides detailed travel behavior, as well as demographic and socioeconomic data, but only for the year 2012. The Census provides detailed annual data, but for almost every category *except* travel behavior and transit use.

We resolve this problem by first using the CHTS to build a model that predicts total unlinked trips as a function of different demographic, socioeconomic, and neighborhood attributes. Importantly, all of these attributes – such as sex, nativity, income, vehicle ownership, and so on – are also tracked in 2000, 2010 and 2015 Census IPUMS microdata. This symmetry allows us to take the parameters of the CHTS model and apply them to time-series data from the Census. We use the CHTS, in short, to estimate the relationship between transit use and different social and economic characteristics, and then use the

Census to track how those characteristics have changed. Once we have measured that change in the Census, we can use the CHTS results to estimate how transit use would have changed as a result.

A core assumption of this approach is that the relationships between transit use and the socioeconomic and demographic attributes, which we can only measure in 2012, are relatively constant across time. We assume that changes in transit use from 2000 to 2015 are driven primarily by changes in the composition of the population, and not by changes in the propensity to use transit by people in different population groups. Our approach is more valid, for example, if transit use changes because there are more or fewer people in poverty, or with vehicles, and not because poor people or people with vehicles become more or less likely to use transit. The latter scenario is possible, but we cannot measure it.

We constructed models for California, the SCAG region, Los Angeles, and the SCAG region outside of Los Angeles. Figure 38 shows results from the first stage of our analysis: the major predictors of transit trips in in the SCAG region. Unsurprisingly, transit trips are highly associated with automobile ownership and access, even accounting for other potential determinants of transit use. Beyond automobile access, transit use is associated with lack of a driver's license, being nonwhite, and being foreign-born — especially being foreign-born and a new arrival.[16]

[16] While we experimented with different functional forms for the regression, we settled on a zero-inflated negative binomial regression. A negative binomial regression is a standard tool for analyzing overdispersed count data, and the zero-inflation corrects for bias that might otherwise be introduced when the value of the dependent variable is frequently zero, as it is with personal transit trips.

Figure 32. All SCAG unlinked trip predictors (CHTS).

Figure 33. Relationship between increased vehicle ownership and falling transit trips (CHTS and US Census Bureau).

When we apply these parameters to Census IPUMS data from 2000, 2010 and 2015,[17] we see a powerful association between rising household vehicle access and falling transit trips. Figure 39 illustrates this relationship by graphing the results of two models. The first model, represented by the dashed line, predicts the change in county transit trips based on changes in all factors *except* vehicle access. In the SCAG region, the line has a mild negative slope from 2000 to 2010 and then a small positive slope from 2010 to 2015, suggesting that changes in these demographic, economic, and geographic factors would be associated with a small decline in transit use since 2000, albeit with a modest uptick between 2010 and 2015. The graphs for Los Angeles County and the SCAG region outside LA County suggest that this predicted modest uptick (which did not actually occur) would have taken place in SCAG's outlying counties. In Los Angeles County, transit trips were predicted to keep declining through 2015.

The second model, represented by the solid line, is identical to the first model but includes changes in automobile access. The difference in results is dramatic. This line starts at a higher point and falls sharply to a lower point, both of which suggest the important role automobile access has in influencing transit use. An absence of automobiles is associated with much more use, and the acquisition of automobiles is associated with much less. The line also suggests that many socioeconomic attributes play an essentially the intermediary role in mode choice. Income, nativity, age, location within the region, and many other factors can influence transit use, but they do so primarily by predicting people's access to private cars.

[17] A natural concern is that the CHTS might measure nativity, income, etc. differently than the Census. We validated our approach by first using the Census independent variables to replicate the CHTS estimates, suggesting this is not a problem.

Income alone, for example, does not take people off buses. Income helps people buy automobiles, and it is auto access that fuels an exodus from transit.[18]

Why did vehicle ownership rise so much? We cannot answer this question definitively, but as we discussed earlier in this report, vehicle ownership has both economic and non-economic determinants. The non-economic determinants include the growth or decline of immigrant groups who are less likely to acquire vehicles, and changes in licensure laws or other laws that surround owning and operating vehicles. The economic reasons can themselves be divided into two categories: changes in personal spending power, and changes in the price of vehicles themselves.

Since the foreign-born, and particularly the recently-arrived foreign-born, are less likely than the native-born to own vehicles, one possibility is that number or composition of immigrants changed. In absolute terms, the foreign-born population in the SCAG region grew between 2000 and 2015. However, it did not grow as fast as the overall population, so the region's share of foreign-born fell, albeit modestly (from 31% to just over 30%). This proportional decline occurred entirely within LA County, which has the most transit service. Every other SCAG county saw its share of foreign-born rise.

	Imperial	Los Angeles	Orange	Riverside	San Bernardino	Ventura	All SCAG
2000	32.2%	36.2%	29.9%	19.0%	18.6%	20.7%	31.0%
2010	31.9%	35.6%	30.5%	22.4%	21.6%	22.9%	31.0%
2015	32.6%	34.7%	30.5%	22.0%	21.3%	22.8%	30.4%
% Change	1.2%	-4.3%	2.0%	13.7%	12.6%	9.2%	-2.0%

Table 5. Share foreign born residents, Southern California counties (2000-2015). US Census.

The *composition* of immigrants, however, changed more dramatically. Table 6 shows that between 2000 and 2015 (and especially between 2000 and 2010), the share of the foreign-born from Asia rose 23 percent, while the share from Central America fell ten percent, and the share from Mexico fell over 13 percent. In 2000, 48 percent of SCAG immigrants were from Mexico, while by 2015 only 41 percent were. Because existing evidence suggests that immigrants from Mexico and Central America are less likely to have automobiles and drive than immigrants from other origin countries, this shift could contribute to rising auto use, especially among the foreign born (US Census ACS 2015).

[18] We should note that these models are *not* predictive models – their purpose is not to yield output that precisely matches the observed transit ridership in the SCAG region (and in fact our predictions do not match observed ridership). We do not build a predictive model for two reasons. First, we are not using the correct data to do so. Regional ridership counts come from annual reporting to the NTD. Because we need person-level data that includes socioeconomic attributes, we are using one-day travel diary data from the 2012 CHTS, and then matching that to person-level data from three Census years. Second and more important, the goal of the regressions is to test a particular hypothesis – that vehicle access is the decisive factor in transit use – not to predict transit ridership. Our output thus yields an estimate of the relative magnitude of the importance of auto access, *not* a precise measure of how many trips each additional increment of auto access actually cost the SCAG region.

	2000	2010	2015	Change
Asia	28.7%	33.9%	35.3%	23.0%
Americas	63.7%	59.1%	57.7%	-9.4%
Latin America	62.4%	58.0%	56.5%	-9.5%
Central America	58.8%	54.5%	53.0%	-9.9%
Mexico	47.7%	42.4%	41.3%	-13.4%
South America	2.6%	2.7%	2.7%	3.8%

Table 6. Composition of SCAG immigrants (2010-2015).

Moreover, among both the foreign-born overall and the foreign-born from Mexico, in data from the US Census IPUMs we see both an assimilation effect and a cohort effect reinforcing the trend toward more vehicles. More recent waves of immigrants are more likely to have vehicles shortly after arrival, and those who do not are faster to acquire them as time goes on.

In the year 2000, for example, 31 percent of the foreign-born households in the SCAG region that had emigrated from Mexico between 1990 and 1999 had no household vehicle, and 74 percent had a vehicle deficit. By 2010, just 9.3 percent of this same cohort of immigrant households had no vehicle, and only 51 percent had a vehicle deficit. By 2015, these figures were 7 percent and 41 percent. This is the assimilation effect; as time passes, immigrants begin to behave more like the native -born.

The cohort effect, however, is more notable. The more recent waves of immigrants to Southern California are more likely to own vehicles shortly after arrival, and as such they have not fully replenish the stock of zero-vehicle households that shrank as existing immigrants assimilated toward cars. In 2010, only 17 percent of the Mexican immigrant households in the SCAG region that had arrived in the US between 2000 and 2009 had no vehicles, compared to 31 percent for those that arrived between 1990 and 1999 in the year 2000. Similarly, only 62 percent of these 2000-2010 arrivals had a vehicle deficit in 2010; in 2000, 74 percent of Mexican immigrants who had arrived since 1990 had a vehicle deficit. By 2015 the share of zero-vehicle households in thepost-2000 cohort was down to 10 percent, and the share with vehicle deficits down to 49 percent. And by in 2015, only 11 percent of Mexican immigrant households that had arrived in 2010 or after did not have a vehicle. A similar pattern holds for the foreign-born overall. More recent waves of immigrants acquired more vehicles more quickly, meaning that as previous waves of immigrants acquired cars, the ranks of the carless were shrinking rather than being replenished.

In sum, immigrants overall are now a slightly smaller share of the population, but also more likely to own vehicles, and to own them earlier after arrival. Mexican immigrants, who are a mainstay of transit ridership in Southern California, remain more likely than the foreign-born overall to live in households without vehicles, but since 2000 they have both added household vehicles and become a smaller share of total immigrants.

It is not clear *why* the foreign-born began adding more cars. In 2015, California began issuing driver's licenses to undocumented immigrants. While licensure may have increased vehicle ownership, for a variety of reasons we do not think it played a large role. First, a license makes a vehicle more useful, but not more affordable; if the barrier to acquiring a vehicle is price, a license does little to overcome that. One might argue in response that legality and not price was the actual barrier, but existing evidence suggests this is simply not the case: many undocumented immigrants, even without licenses, were already driving (Lovejoy & Handy, 2008). Indeed, the prevalence of undocumented driving was the primary motivation for the law that authorized licensure. The decision to issue licenses was justified primarily on safety, not mobility, grounds – there were concerns, for example, that unlicensed undocumented drivers would flee the scene of accidents. It is possible that undocumented immigrants drove *less* – and took transit more – before being licensed, and that licensing did help depress transit use. Even this scenario, however, has its limits. A law that took effect in 2015 cannot explain a per capita ridership decline that began in 2007 or an explosion in vehicle ownership that began in the early 2000s.

Ruling out legal changes brings us to possible economic factors for increased vehicle ownership: Perhaps immigrants (and others) began acquiring more cars because they had more money. A small but persuasive literature on personal consumption shows that poorer people tend to convert even small increases in income into vehicle purchases – a testament to how valuable vehicle access can be (Aaronson, Agarwal, & French, 2012; Adams, Einav, & Levin, 2009; Leininger, Levy, & Schanzenbach, 2010; Parker, Souleles, Johnson, & McClelland, 2013; Souleles, 1999).

The 2000-2015 period was volatile economically, as the economy grew steadily before cratering during the Great Recession. During most of this time, furthermore, median wages and incomes were stagnant. Median household income in LA County, for example, was about $59,000 in both 2000 and 2015, and was slightly lower during the recession in 2010. The Census suggests that newer waves of immigrants are if anything slightly poorer than the cohorts that came before them: In 2000 average incomes of immigrants that had arrived since 1990 was slightly higher than the average income of immigrants in 2010 who had arrived after 2000. Finally, we can see in Figure 40 that vehicle growth occurred across all income groups, for both the foreign-born and the native-born. In 2000 just under 40 percent of households earning less than $25,000 per year had a vehicle-deficit, as did 60 percent of immigrant households in the same income bracket. In 2015 less than 30 percent of native-born households in the same income bracket had a vehicle-deficit, as did just over 50 percent of immigrant households. The pattern holds for households earning $25,000 to $50,000, and for more affluent households.

Figure 34. Share of households with vehicle deficits, by income and nativity, 2000-2015, US Census (solid line = foreign born, dashed line = native born).

It is therefore not obvious that rising incomes played a large role in rising vehicle ownership. Certainly the macro-economy played some role in changing levels of transit use. Transit use contracted during the Great Recession: A robust economy puts more people to work, which increases both commuting and discretionary travel. A faltering economy does the reverse. But these same economic trends do not appear to explain why people acquired so many more vehicles than they had in previous periods.

Even at constant incomes, households can acquire more vehicles if the effective price of those vehicles falls. The effective price reflects not the sticker price, but the actual outlay required of a consumer to drive the vehicle home. A large part of this outlay is often a down payment, meaning that vehicles can become more affordable not just if their price declines, but also if financing that price becomes easier.

Some evidence does suggest that vehicle finance became easier during this time. Although lost somewhat in the shadow of easy home-lending credit, automobile credit also surged in the run-up to the Great Recession. And unlike home lending, which tightened considerably after the crash, automobile lending has remained relatively loose. Consumers with good credit scores (typically above 700) can find auto loans with low- and sometimes even zero-interest rates. Since the recession, the share of SCAG-region residents with credit scores below 660 (considered subprime) has fallen (Figure 41), suggesting that consumers have gotten better access over time to low-interest loans (Federal Reserve Bank of New York and Equifax, various). Subprime auto loans also remain prevalent, allowing consumers with poor credit histories or low

incomes to finance vehicle purchases. U.S. auto loan originations among subprime consumers increased 140 percent from 2010 to 2015 (New York Fed Consumer Credit Panel / Equifax). We do not have local-level data on vehicle debt, but inflation-adjusted per capita vehicle debt in California rose 91 percent between 2000 and 2015 (Federal Reserve Bank of New York).[19]

Figure 35. Percent of sample with credit scores below 660, by county in SCAG region.

CONCLUSION

Per capita transit ridership, long sluggish in Southern California, began to fall in 2007. In 2012 that per capita decline accelerated, and manifested as a more noticeable and more alarming absolute decline. The precise reasons for this decline are almost certainly manifold, and hard to disentangle. Gas prices fell sharply after rising steeply. The explosive growth of Uber and Lyft provided new mobility options to some people who had been mobility-constrained. In Orange County, fares rose substantially. On LA Metro, by at least some accounts, feelings of danger increased. Some of the people most likely to use transit moved to areas where transit was less prevalent. Especially in recent years, all these factors most likely contributed to transit's downturn.

[19] Data come from the New York Federal Reserve Bank's Consumer Credit Panel.

But in weighing the evidence, the overwhelming factor appears to be a dramatic increase in the stock of private automobiles. Between 2000 and 2015 Southern Californians acquired vehicles at nearly four times the rate they had between 1990 and 2000. This growth of the private vehicle stock lines up—in timing, in magnitude, and in theory—with the region's falling transit use. Vehicle access grew across all income levels and groups, but disproportionately among those groups, like the low-income and foreign-born, who are most likely to ride transit. Transit ridership in the SCAG region has long depended on a sizable minority of people who did not, largely for economic reasons, have access to cars. After 2000, many of these people acquired cars, and it should not surprise us that they started riding transit less.

To be sure, the case we build in reaching this conclusion is circumstantial. For reasons we have already enumerated, the data available to examine transit riders are scarce and fragmented, which leaves alternative explanations possible if not plausible. Certainly future research should emphasize more data collection. Given the data available today, however, in our judgement rising vehicle ownership is the best explanation for falling transit ridership.

If this explanation is sound, it poses a daunting problem for transit operators. When lower-income people graduate from transit to driving, transit agencies bear a cost, but the other side of that cost is a large benefit for both the people who start driving *and* for society overall. In the aggregate, Southern Californians drive too much, once the various costs of pollution, congestion and crashes are accounted for. But some Southern Californians – the poorest of them – drive *too little*, and both their lives and the region as a whole would be improved if they drove a bit more. The low-income person who acquires a vehicle often makes fewer trips than an affluent person (driving is expensive) and the trips they make are often essential, and have social benefits that exceed their social costs. A car trip by a low-income household is more likely than one by an affluent household to involve finding and keeping work, getting to school, or accessing better health and daycare options. These trips might modestly increase congestion and pollution, but they have large paybacks in employment, earnings, and overall well-being that exceed those costs. Affluent households, in contrast, make many more trips, and more trips whose social value is lower (they might increase congestion and pollution not just by driving to work, but also by driving to lunch, or to visit friends).

Given the powerful difference a car can make in the lives of low-income people, efforts by transit agencies to recapture low-income riders can have a perverse impact: they would target some of the highest-value vehicle trips in the region. Ideally, of course, transit agencies would pull people away from lower-value vehicle trips. It makes little sense to deprive a low-income person of their trip to work at a location poorly served by transit, when affluent people routinely drive for errands and visits that they could easily complete by foot or transit. A quick trip to a store a half mile away (or a trip to a store a mile away when a comparable store is a quarter mile away) is more likely to have social costs that exceed its benefits. And these trips are abundant.

Given this situation, and given the ambitious greenhouse gas reduction goals that California has assigned to transit, planners and operators may need to expand transit's target market. Transit should by no means abdicate its social service mission, but as we stated in the introduction, per capita transit use falls when current riders stop riding, and when new residents don't start. Transit today relies on a high rate of use by a narrow base of people. But if that narrow base of people is acquiring vehicles, transit's healthy future lies in reversing those circumstances, and striving for at least a low rate of use by a broad base of people. The SCAG region lost 72 million transit rides annually from 2012 to 2016. This number seems daunting,

but the region has 18.8 million people. According to the CHTS, about 77 percent of those people (roughly 14.5 million), ride transit rarely or never. Herein lies vast untapped potential. If one out of every four of those people replaced a single driving trip with a transit trip once every two weeks, annual ridership would grow by 96 million—more than compensating for the losses of recent years.

The obstacle to this outcome, however, is large and beyond the direct control of transit operators: driving is too cheap. The large subsidies given to transit in recent years pale next to the longstanding subsidies for automobiles that are hidden in unpriced road use, unpriced or underpriced street parking, high minimum parking requirements, and taxpayer- and developer-financed road-widenings. If public policy does not adequately confront underpriced driving, then transit ridership will likely continue to falter, and transit will not meet its ambitious environmental goals.

Appendix A

Fare regression output.

Descriptive Data (data are in panel form; observations are agency-years). Route coverage = route miles/service area. Headways = route miles/ (revenue miles/service miles). The service area is in square miles. Service area and service population are the difference between UZA average level of service and service area/ service population.

Absolute Levels

	mean	sd	n
unlinked passenger trips	15,213,380	130,300,000	9,030
vehicle revenue hours	395,268	1,659,684	9,037
headway	33.07	51.01	6,954
route coverage	3.18	6.32	6,922
service area	713.2	8,963.3	9,793
service population	718,549	1,729,745	9,794
fare (2015$)	$1.71	$2.52	8,647

Change from Prior Year

	mean	sd	n
change in unlinked passenger trips	170,442	6,338,137	8,037
change in vehicle revenue hours	5,015	87,867	8,047
change in headway	0.02	18.81	6,277
change in route coverage	-0.07	5.45	6,255
change in service area	0.0	0.4	8,852
change in service population	0	0	8,853
change in fare (2015$)	$0.01	$0.64	7,702

Regression Output:
The regressions are linear and all variables are naturally log-transformed.
Models were run with the dependent variables being levels and changes.
Model 4 is the model discussed in the text.

* change from the prior year is calculated using absolute levels

BICYCLE FRIENDLY COMMUNITY
Fall 2021
BRONZE
THE LEAGUE OF AMERICAN BICYCLISTS

RIVERSIDE, CA

TOTAL POPULATION
324,722

TOTAL AREA *(sq. miles)*
81.54

POPULATION DENSITY
3982

OF LOCAL BICYCLE FRIENDLY BUSINESSES 2

OF LOCAL BICYCLE FRIENDLY UNIVERSITIES 1

10 BUILDING BLOCKS OF A BICYCLE FRIENDLY COMMUNITY

	Average Silver	*Riverside*
High Speed Roads with Bike Facilities	35%	51%
Total on- and off-road Bicycle Network Mileage to Total Road Network Mileage	48%	21%
Bicycle Education in Schools	GOOD	VERY GOOD
Share of Transportation Budget Spent on Bicycling	11%	10%
Bike Month and Bike to Work Events	GOOD	AVERAGE
Active Bicycle Advocacy Group	YES	YES
Active Bicycle Advisory Committee	MEETS EVERY TWO MONTHS	MEETS AT LEAST MONTHLY
Bicycle–Friendly Laws & Ordinances	GOOD	NEEDS IMPROVEMENT
Bike Plan is Current and is Being Implemented	YES	YES
Bike Program Staff to Population	1 PER 78K	1 PER 216.5K

CATEGORY SCORES

ENGINEERING *Bicycle network and connectivity*	4.7/10
EDUCATION *Motorist awareness and bicycling skills*	3.9/10
ENCOURAGEMENT *Mainstreaming bicycling culture*	3.6/10
EVALUATION & PLANNING *Setting targets and having a plan*	5.0/10

KEY OUTCOMES

	Average Silver	*Riverside*
RIDERSHIP *Percentage of Commuters who bike*	2.7%	0.71%
SAFETY MEASURES **CRASHES** *Crashes per 10k bicycle commuters*	537	758
SAFETY MEASURES **FATALITIES** *Fatalities per 10k bicycle commuters*	6.3	9.5

KEY STEPS TO SILVER

» Congratulations on recently adopting the Riverside PACT, including a Complete Streets Ordinance that directs transportation planners and engineers to routinely design and operate the entire right-of-way to enable safe access for all users. It is important to ensure that there is a strong implementation and compliance process for this new policy going forward. The PACT's components will serve as a blueprint for improvements and together have many great recommendations for a more connected network of safe and comfortable bicycle facilities.

» Continue to improve and expand the low-stress bike network for all ages and abilities, and ensure that your community follows a bicycle facility selection criteria that increases separation and protection of bicyclists based on levels of motor vehicle speed and volume.

» Increase the amount of high quality bicycle parking throughout the community. Conduct a bike parking study or audit to determine current conditions of bike parking, both in terms of quality and quantity. Develop community-wide Bicycle Parking Standards to ensure that APBP-compliant bicycle parking is available in areas near transit and urban activity centers. (See www.apbp.org/bicycle-parking-solutions)

» Continue efforts to re-launch a new public bike share system to replace the system that recently ceased operations. Bike sharing is a convenient, cost effective, and healthy way of encouraging locals and visitors to make short trips by bike, make bicycling more accessible to all, and to bridge the 'last mile' between public transit and destinations.

KEY STEPS CONTINUED ON PAGE 2...

RIVERSIDE, CA

Fall 2021

KEY STEPS TO SILVER CONTINUED

» Improve bicycle safety education for students of all ages by incorporating more on-bicycle education opportunities and by expanding the program to all K-12 schools. Providing bicycles in schools for on-bike education ensures that all students can learn to safely ride a bicycle regardless of the availability of a bicycle in their household. Work with the school district, local bicycle groups, and interested parents to expand and improve the Safe Routes to School program.

» Expand bicycle education opportunities for adults. Consider ways to target demographics who currently do not feel safe riding with classes or events that address their concerns and create an inclusive, welcoming environment.

» Host a League Cycling Instructor (LCI) seminar to increase the number of local LCIs in your community. Having several active instructors in the area will enable you to expand cycling education for youth and adults, recruit more knowledgeable cycling ambassadors, deliver Bicycle Friendly Driver education to motorists, and have experts available to assist in encouragement programs.

» Increase the amount of staff time spent on improving conditions for people who bike and walk, either by creating a new Bicycle & Pedestrian Coordinator position or expanding the responsibilities of current staff.

» Continue to develop a bicycle count program that utilizes several methods of data collection including automated bicycle counters to provide long-term data on bicycle use at fixed points and mobile counters to provide periodic or before/after data related to changes in your community's road or bicycle network. Observational counts and surveys can supplement automated data in order to collect demographic information and examine social equity goals.

» Adopt a goal to eliminate traffic fatalities and serious injuries and support this goal with a comprehensive road safety plan or a Vision Zero policy to identify specific strategies to reduce traffic crashes and deaths for all road users, including bicyclists and pedestrians. Introducing low stress bikeway facilities and lowering vehicle speeds through traffic calming treatments are important engineering components for addressing roadway safety.

» Continue efforts to examine and reconsider the City's policies regarding non-exclusively human powered devices on trails so that electric pedal assist bicycles can be used more freely on trails throughout the community.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING TENTATIVE TRACT MAP NO. 38596 TO SUBDIVIDE 44.46 ACRES OF UNDEVELOPED PROPERTY INTO 73 BUILDABLE LOTS AND 13 LETTERED LOTS FOR CONDOMINIUM, MULTI-FAMILY RESIDENTIAL, OPEN SPACE, AND PUBLIC RIGHT-OF-WAY PURPOSES, LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN22-20086) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Tentative Tract Map No. 38596 (the "Project") to subdivide 44.46 acres of undeveloped property into 73 buildable lots and 13 lettered lots for condominium, multi-family residential, open space, and public right-of-way purposes; and

WHEREAS, the proposed project (Project No. PLN25-20086) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by the Eastvale City Council on May 11, 2022, for the Leal Master Plan project; Therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on May 10, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20086 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on May 20, 2026. In addition, on May 7, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for Tentative Tract Map 38596 (PLN25-20086); and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on May 20, 2026, at which time it received public testimony concerning Project No. PLN25-20086, and continued the public hearing to the June 17, 2026, regularly scheduled Planning Commission meeting; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on June 17, 2026, at which time it received public testimony concerning Project No. PLN25-20086, and continued the public hearing to the August 19, 2026, regularly scheduled Planning Commission meeting; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on August 19, 2026, at which time it received public testimony concerning Project No. PLN25-20086, and continued the public hearing to the September 16, 2026, regularly scheduled Planning Commission meeting; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20086 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20086; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project No. PLN25-20086, and considered proposed project Tentative Tract Map 38596.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of Tentative Tract Map 38596 requests to subdivide 44.46 acres of Tentative Tract Map 38290 into 73 buildable lots and 12 lettered lots for condominium, multi-family residential, open space, and public right-of-way purposes. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR TENTATIVE TRACT MAP NO. 38594

Pursuant to Title 130 of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed tentative tract map is consistent with the City's General Plan and any applicable specific plan as specified in Government Code Section 65451.

Evidence: Tentative Tract Map 38596 will be consistent with the City's General Plan in that it is compatible with the objectives, policies, general land uses and programs specified in the General Plan as well as the Leal Master Plan, including

(a) Street alignments, grades, and widths;
(b) Drainage and sanitary facilities and utilities, including alignments and grades thereof;
(c) Location and size of all required easements and right-of-way;
(d) Lot size and configuration;
(e) Traffic access;
(f) Grading;
(g) Land to be dedicated for park or recreational purposes; and
(h) Such other specific requirements in the plan and configuration of the entire subdivision as may be necessary to insure conformity to or implementation of the General Plan and Leal Master Plan.

Finding 2: The design or improvement of the proposed subdivision is consistent with the City's General Plan and any applicable specific plan.

Evidence: The proposed Tentative Tract Map 38596 has been designed to meet all City standards applicable to subdivisions, including providing satisfactory pedestrian and vehicular circulation, including emergency vehicle access and on- and off-site public improvements. All streets, utilities, and drainage facilities had been designed and were required to be constructed in conformance with City standards.

Finding 3: The site is physically suitable for the type and proposed density of development.

Evidence: On site topography is generally flat without significant slopes and consists of approximately 44.46-acres of vacant land, which had been determined to be suitable for the development of single-family, multi-family, open space, and public right-of-way purposes as analyzed in the Addendum to the Previously Certified Environmental Impact Report. The applicant has submitted a conceptual development plan to further illustrates that a future project may be constructed on the site without adversely affecting the health, safety, or welfare of anyone who will utilized the development or anyone living within the surrounding

community. Therefore, the size, 44.46-acres will accommodate the proposed density of the Project.

Finding 4: The design of the subdivision or proposed improvements is not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Evidence: CSL biologist conducted an analysis of biological resources and jurisdictional waters within the project area on June 9, 2021, and focused burrowing owl surveys and narrow endemic plant surveys were conducted on June 16, 23, July 1 and 13, 2021. Delhi Sands Flower Loving Fly Assessment was performed on June 18, 2021. Based on the updated 2021 detailed biological Surveys, the Project is not anticipated to have a greater impact than what was originally analyzed in the 2015 EIR and is not likely to cause substantial environmental damage or injury fish or wild life or their habitat.

Finding 5: The design of the subdivision or type of improvements is not likely to cause serious public health problems.

Evidence: The design of the subdivision is in conformance with the City's General Plan, Leal Master Plan Amendment, and City of Eastvale Subdivision Ordinance. The construction of all improvements on the site has been conditioned to comply with all applicable City of Eastvale ordinances, codes, and standards including, but not limited to, the California Uniform Building Code and the City's ordinances relating to stormwater runoff management and controls. In addition, the design and construction of all improvements for the subdivision have been conditioned to be in conformance with adopted public works standards. The City's ordinances, codes, and standards have been created based on currently accepted standards and practices for the preservation of the public health, safety, and welfare. Finally, the proposed street system throughout the subdivision will provide emergency vehicular access I the immediate neighborhood.

Finding 6: The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision.

Evidence: No easements of record or easements established by judgement of a court of competent jurisdiction for public access across the site have been disclosed in a search of the title records for the site and the City does not otherwise have any constructive or actual knowledge of any such easements.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Tentative Tract Map 38596 (PLN25-20086) to subdivide and 44.46 acres of undeveloped property into 73 buildable lots and 13 lettered lots for condominium, multi-family residential, open space, and public right-of-way purposes, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE OVERALL SITE PLANNING, MASTER LANDSCAPING, STREETSCAPE DESIGN, AND OPEN SPACE AMENITIES OF PHASE C (TENTATIVE TRACT MAP NO. 38596) OF THE RISEWELL HOMES DEVELOPMENT LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBERS 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20087) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities of Tentative Tract Map No. 38596, referred as Phase C of the Risewell Homes Development (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20087) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on May 10, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20087 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on May 20, 2026. In addition, on May 7, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20087; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on May 20, 2026, at which time it received public testimony concerning Project NO. PLN25-20087 and continued the public hearing to the June 17, 2026, regularly scheduled Planning Commission meeting; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on June 17, 2026, at which time it received public testimony concerning Project NO. PLN25-20087 and continued the public hearing to the August 19, 2026, regularly scheduled Planning Commission meeting; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on August 19, 2026, at which time it received public testimony concerning Project NO.

PLN25-20087 and continued the public hearing to the September 16, 2026, regularly scheduled Planning Commission meeting; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20087 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20087; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning the proposed Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities for Phase C (Tentative Tract Map 38596) of the Risewell Homes development.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20087 requests Major Development Review for the overall site planning, master landscaping, streetscape design, and open space amenities for Phase C (Tentative Tract Map 38596) of the Risewell Homes Development. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20087

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of a downtown village with a mix of uses including retail, civic, residential, and recreational through heavily landscaped spaces, high-quality architecture and design, and ample access for pedestrians, bicyclist, and automobiles. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for a vibrant mixed use downtown.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing memorable and enjoyable pedestrian experiences with the proposed urban forest and ample landscaping, wide sidewalks, multipurpose trails, decorative light fixtures, enhanced paving, and both active and passive open spaces. The proposed design is suitable for the mixed-use, downtown village, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The proposed architecture, including the character and quality of the design, are suitable for the purposes of a mixed-use, downtown village, lifestyle center by establishing a clear, unparalleled design concept to Eastvale. The project is

designed for the pedestrian experience with the proposed urban forest and ample landscaping, wide sidewalks, multipurpose trails, decorative light fixtures, enhanced paving, and both active and passive open spaces. As conditioned, the proposed project will complement traditional architectural styles and introduce novel design features that will enhance the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not with the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 22-20088 for the overall site planning, master landscaping, streetscape design, and open space amenities for Phase C (Tentative Tract Map 38596) of the Risewell Homes development, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 7B (PA-7B) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 72-UNIT 6-PLEX RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20088) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 7B (PA-7B) of the Leal Master Plan or Lots 1-6 and Lots A-B of proposed Tentative Tract Map 38596, to accommodate a proposed 72-unit 6-plex residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20088) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20088 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20088; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20088; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20088 requests Major Development Review for the master site planning and architecture of PA-7B of the Leal Master Plan to accommodate a proposed 72-unit 6-plex residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20088

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of attached multiple-family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Transitional Spanish, Modern Prairie, Transitional Farmhouse. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20088 for the master site planning and architecture of Planning Area 7B (PA-7B) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 7C (PA-7C) OF THE LEAL MASTER PLAN TO ACCOMMODATE AN 80-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20089) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 7C (PA-7C) of the Leal Master Plan or Lots 7-15 and Lettered Lot C of proposed Tentative Tract Map 38596, to accommodate a proposed 80-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20089) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20089 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20089; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20089; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20089 requests Major Development Review for the master site planning and architecture of PA-7C of the Leal Master Plan to accommodate a proposed 80-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20089

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Modern, Contemporary, and Farmhouse. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20089 for the master site planning and architecture of Planning Area 7C (PA-7C) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 12A (PA-12A) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 72-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20090) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 12A (PA-12A) of the Leal Master Plan or Lots 53-58 and 68-73 of proposed Tentative Tract Map 38596, to accommodate a proposed 72-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20090) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20090 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20090; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20090; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20090 requests Major Development Review for the master site planning and architecture of PA-12A of the Leal Master Plan to accommodate a proposed 72-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20090

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Transitional Spanish, American Farmhouse, and Contemporary Ranch. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20090 for the master site planning and architecture of Planning Area 12A (PA-12A) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 12B (PA-12B) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 87-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20091) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 12B (PA-12B) of the Leal Master Plan or Lots 19-21, 30-35, 48-50 and Lettered Lot E of proposed Tentative Tract Map 38596, to accommodate a proposed 87-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20091) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20091 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20091; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20091; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20091 requests Major Development Review for the master site planning and architecture of PA-12B of the Leal Master Plan to accommodate a proposed 87-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20091

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Spanish, Prairie, and Farmhouse. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20091 for the master site planning and architecture of Planning Area 12B (PA-12B) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 12C (PA-12C) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 73-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20092) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 12C (PA-12C) of the Leal Master Plan or Lots 22-29, 51-52, and Lettered Lot D of proposed Tentative Tract Map 38596, to accommodate a proposed 73-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20092) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20092 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20092; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20092; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20092 requests Major Development Review for the master site planning and architecture of PA-12C of the Leal Master Plan to accommodate a proposed 73-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20092

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Transitional Spanish, Santa Barabara, and Contemporary Spanish. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclist. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20092 for the master site planning and architecture of Planning Area 12C (PA-12C) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 13A (PA-13A) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 64-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20093) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 13A (PA-13A) of the Leal Master Plan or Lots 59-62 and 64-67 of proposed Tentative Tract Map 38596, to accommodate a proposed 73-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20093) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20093 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20093; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on August 19, 2026, at which time it received public testimony concerning Project NO. PLN25-20093; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20093 requests Major Development Review for the master site planning and architecture of PA-13A of the Leal Master Plan to accommodate a proposed 64-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20093

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Transitional Spanish, Contemporary Farmhouse, and Monterey. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclists. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20093 for the master site planning and architecture of Planning Area 13A (PA-13A) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 13B (PA-13B) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 32-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20094) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 13B (PA-13B) of the Leal Master Plan or Lots 42-46 of proposed Tentative Tract Map 38596, to accommodate a proposed 32-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20094) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20094 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20094; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20094; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20094 requests Major Development Review for the master site planning and architecture of PA-13B of the Leal Master Plan to accommodate a proposed 32-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20094

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Early California, Italian, and Farmhouse. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclists. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20094 for the master site planning and architecture of Planning Area 13B (PA-13B) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

RESOLUTION NO. 26-____

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF EASTVALE, CALIFORNIA, APPROVING THE MASTER SITE PLANNING AND ARCHITECTURE OF PLANNING AREA 13C (PA-13C) OF THE LEAL MASTER PLAN TO ACCOMMODATE A 49-UNIT SINGLE FAMILY RESIDENTIAL COMMUNITY WITH ASSOCIATED PARKING AREAS AND LANDSCAPING LOCATED AT THE NORTHWEST CORNER OF LIMONITE AVENUE AND HAMNER AVENUE, ASSESSOR'S PARCEL NUMBER 164-030-052.

WHEREAS, the Planning Department of the City of Eastvale received an application (PLN25-20095) on November 3, 2025, from Risewell Homes (the "Applicant") requesting Major Development Review for the master site planning and architecture of Planning Area 13C (PA-13C) of the Leal Master Plan or Lots 16-18, 36-41, and 47 of proposed Tentative Tract Map 38596, to accommodate a proposed 49-unit single family residential community, with associated parking areas, and landscaping (the "Project"); and

WHEREAS, the proposed project (Project No. PLN25-20095) is considered a "Project" as defined by the California Environmental Quality Act, Public Resources Code Section 21000 et seq.; and

WHEREAS, review of the proposed project with respect to the proposed uses was evaluated in the Addendum to the Program Environmental Impact Report (State Clearinghouse No. 2015031028) certified by City Council on May 11, 2022, for the Leal Master Plan project; therefore, no additional environmental analysis is necessary; however, a Notice of Determination will be filed following any action taken on the project; and

WHEREAS, on September 6, 2026, the City of Eastvale City Clerk published a legal notice in compliance with state law concerning PLN25-20095 in the *Press Enterprise*, a local newspaper of general circulation, regarding the Planning Commission meeting on September 16, 2026. In addition, on September 3, 2026, a public hearing notice was also mailed to commercial tenants and residents within a 600-foot radius of the projects site indicating time, date, and place of the public hearing for PLN25-20095; and

WHEREAS, the City of Eastvale Planning Commission conducted a duly noticed public hearing on September 16, 2026, at which time it received public testimony concerning Project NO. PLN25-20095; and

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF EASTVALE, DOES HEREBY FIND, DETERMINE, AND RESOLVE AS FOLLOWS:

SECTION 1. ENVIRONMENTAL FINDINGS

Pursuant to the California Environmental Quality Act, including Public Resources Code Sections 21080(e) and 21082.2, and based on the record and/or as provided at the public hearing, the Planning Commission hereby finds and determines that the project was adequately analyzed according to the CEQA Guidelines, as supported by the following Findings and Evidence:

Finding 1: The proposed project is exempt from further environmental review requirements.

Evidence: On May 11, 2022, the Eastvale City Council adopted an Addendum to the previously Certified Program Environmental Impact Report (PEIR) for approval of a Leal Master Plan Amendment, Tentative Tract Map 38290, and Major Development Review. The California Environmental Quality Act (CEQA) Statutes and Guidelines states that when an environmental impact report (EIR) has been certified for a project, no subsequent EIR shall be prepared unless the lead agency determines so on the basis of substantial change in the project which would require major revisions in the EIR. The requested approval of PLN25-20095 requests Major Development Review for the master site planning and architecture of PA-13C of the Leal Master Plan to accommodate a proposed 49-unit single family residential community. As such, the proposed project does not exceed the maximum development assumptions of the certified PEIR and would not represent an increased development intensity within the overall approved project area. As such, no further CEQA documentation would be warranted for the proposed project pursuant to CEQA Guidelines Section 15168.

SECTION 2. FINDINGS FOR MAJOR DEVELOPMENT REVIEW PLN25-20095

Pursuant to Section 120.02.010(c)(6) of the Eastvale Municipal Code, and in light of the record before it, including the staff report dated September 16, 2026, and all evidence and testimony heard at the public hearing of this item, the Planning Commission hereby finds and determines as follows:

Finding 1: The proposed project is consistent with the objectives of the general Plan and complies with applicable zoning regulations, specific plan provisions, special planning area provisions, design guidelines, and improvement standards adopted by the city.

Evidence: The General Plan land use designation of the proposed site is Leal Policy Area. The Leal Policy Area land use designation allows for the development of single family residential. Therefore, the proposed project would be consistent with the General Plan designation for the site and will further the objectives of the General Plan. Additionally, the proposed project is consistent with the Leal Master Plan Amendment site characteristics, design guidelines, and development standards for the single-family residential product time.

Finding 2: The proposed architecture, site design, and landscape are suitable for the purposes of the building and site and will enhance the character of the neighborhood and community.

Evidence: The proposed project has been designed to comply with the development and design standards of the Leal Master Plan Amendment, such as providing identifiable entries with decorative paving, front entries oriented towards the street, paseos, and open space, building articulation with roof overhangs, balconies, and projections, and a consistent plant palette creating to an urban forest. The proposed architecture, site plan, and landscaping are suitable for the mixed-used downtown, lifestyle center contemplated for the site in the General Plan and Leal Master Plan Amendment and will enhance the character of the neighborhood and community with novel architecture. For these reasons, the proposed project, as conditioned will enhance the character of the neighborhood and community.

Finding 3: The architecture, including the character, scale, and quality of design, relationship with the site and other buildings, building materials, colors, screening of exterior appurtenances, exterior lighting, and signing and similar elements, establishes a clear design concept and is compatible with the character of buildings on adjoining and nearby properties.

Evidence: The architecture of the proposed residential community has been designed to satisfy the development and design standards of the Leal Master Plan Amendment. The project displays articulated front building facades that promote individual unit identity and are oriented towards the street, paseos, and open space. All elevations of the building have been designed to create variation and visual interest with the use of various materials and colors. The residential units consist of Early California, Italian, and Farmhouse. Additionally, decorative street lighting and enhanced pavement at pedestrian crossing and community entry points add to the high quality design of the community. For these reasons, the proposed architecture is well-suited and is consistent with the character of the buildings on adjoining and nearby properties.

Finding 4: The proposed project will not create conflicts with vehicular, bicycle, or pedestrian transportation modes of circulation.

Evidence: The proposed project is conditioned to ensure adequate circulation to and from the site. All streets have been designed to handle the type and quantity of vehicular traffic associated with the proposed project. Wide sidewalks, designated bike lanes, and changes in materials (i.e., asphalt, concrete, decorative pavers, and decomposed granite) clearly distinguish each mode of circulation reducing conflicts between motorized vehicles, pedestrians and bicyclists. Finally, the City Engineer and Riverside County Sheriff's Department have reviewed the proposed project access and on-site circulation design and do not have any concerns.

Finding 5: The proposed project is consistent with the most recently adopted version of the Chino Airport Land Use Compatibility Plan.

Evidence: The project site is not within the Chino Airport Influence Area.

SECTION 3. MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP)

The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area, and mitigation is provided through payment of the MSHCP Mitigation Fee.

SECTION 4. RECORD OF PROCEEDING

The documents and other materials that constitute the record of the proceedings upon which the Planning Commission's decision is based, which include but are not limited to the staff reports as well as all materials that support the staff reports for the proposed project, are located in the City Clerk's office of the City of Eastvale at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752. The custodian of these documents is the City Clerk of the City of Eastvale.

SECTION 5. DETERMINATION

Based upon the findings outlined in Sections 1 through 3, the Planning Commission of the City of Eastvale hereby approves Major Development Review No. PLN 25-20095 for the master site planning and architecture of Planning Area 13C (PA-13C) of the Leal Master Plan, subject to the conditions of approval.

PASSED, APPROVED AND ADOPTED this 16th day of September, 2026.

Fees				
10.	Pursuant to Sections 3.2.2 and 4.1.6.1 of Development Agreement No. 003, applicant shall pay the development impact fees in effect at the time building permits are issued, excluding the Parkland Improvement Impact fee and the Community and Recreation Center Impact Fee. For informational purposes, the current impact fee amounts applicable to the project and listed below can be found at https://portal.laserfiche.com/Portal/DocView.aspx?id=209182&repo=r-78788824. City Hall Impact Fee Police Station Impact Fee Fire Department Facilities Impact Fee Library Impact Fee The park, open space and recreation improvement requirements applicable to the project are set forth in Section 4.1.6.1 and Exhibit E of Development Agreement No. 003 and applicant shall provide parkland and parkland improvements, or fees in lieu thereof, in compliance with the terms of Development Agreement No. 003.	Prior to Building Permit Issuance unless deferred pursuant to Eastvale Municipal Code Section 110.28.050B	Building Division	
11.	Excluding the regional pass-through fees in conditions of approval 11 and 12, the applicant may protest any fees, dedications, reservations, or other exactions imposed by the City on the project in the manner provided for in Government Code Section 66020. Any protest of the impact fees in condition of approval 7 above, or any other fees, dedications, reservations,	90 days from Tentative Tract Map 38596 approval	Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	or other exactions imposed by the City on the project through these conditions of approval other than the regional pass-through fees in conditions of approval 11 and 12, must be filed within 90-days of the date of the conditional approval of Tentative Map 38596. The applicant is not required to file an appeal of a condition of approval imposing any fees, dedications, reservations, or other exactions under Eastvale Municipal Code Sections 120.02.010(c)(7) and 120.01.40 in addition to a protest under this condition of approval. The acknowledges that the Applicant is relying upon this representation in not filing any appeal to the City Council to contest these fees.			
12.	In accordance with Government Code Section 66006(e), the Applicant is hereby notified of the right to file with the City Clerk: (a) a request for an audit of the City's development impact fees in accordance with Government Code Section 66023; and (b) a written request for mailed notices of the City's public meetings to review annual reports of development impact fees under Government Code Section 66006(b)(1).		Building Division	
13.	RBBD fees in effect at the time the applicant submitted its SB 330 preliminary application shall be paid prior to Certificate of Occupancy, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d).	Prior to final Certificate of Occupancy	Public Works Department	
14.	TUMF fees in effect at the time the applicant submitted its SB 330 preliminary application shall be paid prior to Certificate of Occupancy, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d). The applicant may appeal TUMF fees in accordance	Prior to final Certificate of Occupancy	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	with the provisions for an appeal set forth in the TUMF Administrative Plan and any other applicable WRCOG procedures and requirements.			
15.	MSHCP fees in effect at the time the applicant submitted its SB 330 preliminary application, as such fees may be adjusted pursuant to Government Code Section 65589.5(o)(2)(A), shall be paid prior to Building permit issuance, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d). The applicant may appeal MSHCP fees in accordance with applicable WRC-RCA procedures and requirements.	Prior to Building Permit Issuance	Public Works Department	
Prior to Map Recordation (TTM 38596)				
16.	Right-of-way as shown on TTM38596 along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as requested by the City Engineer.	Prior to Map Recordation	Public Works Department	
17.	All public road dedications as part of this Conditions of Approval shall utilize the following design criteria to the satisfaction of the City Engineer: • 11 feet for left/right turn pockets • 12 feet for general purpose travel lanes • 14 feet for general purpose travel lanes adjacent to the right curb • 14 feet for right turn pocket • Scholar Way shall be designed to match the existing improvements constructed with Phase A to the south.	Prior to Map Recordation	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
18.	If not already constructed by a previous phase, backbone streets shall consist of 76' of right-of-way developed as follows: 2' of landscaping, an 11' concrete dual-purpose trail (evenly delineated by striping), 7' of landscaping, 36' for two (2) general purpose travel lanes, 7' of landscaping, and 5' concrete sidewalk, and 8' of landscaping.	Prior to Map Recordation	Public Works Department	
19.	Provide plans (landscape, grading, etc.) showing a multipurpose trail/Class I trail/linear park fronting the property along 58th Street and Scholar Way.	Prior to Map Recordation	Public Works Department	
Prior to the Issuance of Grading Permit				
20.	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project- specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations- generated air toxic pollutant mitigation measures may include but not be limited to: Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible.	Prior to Grading Permit	Planning, Building and Safety, or Public Works Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle City of Eastvale Page 21 Leal Master Plan EIR Addendum No. 1 Idling Emission Reduction Program. Restricting the number of daily heavy-duty haul truck deliveries. *(Mitigation Measure 3.3.5b Air Quality)*			
21.	The following Addendum No.1 to the Leal Master Plan EIR mitigation measures shall be implemented and specified on all project construction plans: Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May (Municipal Code Chapter 8.52, Noise Regulation). All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. Construction equipment staging areas shall be centrally located on the project site or located at the farthest distance possible from nearby residential land uses. All motorized construction equipment and vehicles shall be turned off when not in use. *(Mitigation Measure 3.6.4 Noise)*	Prior to Grading Permit	Planning Division	
22.	MM 3.7.1 All construction and clearing activities shall be conducted outside of the avian nesting season (January 15– August 31), when feasible. If clearing and/or construction activities occur during the	Prior to Grading Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged. *(Mitigation Measures 3.7.1 Biological Resources)*			
23.	If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery. The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of cultural resources. *(Mitigation Measure 3.8.2 Cultural Resources)*			
24.	If human remains are discovered during any ground-disturbing activities in the project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and I shall be followed. *(Mitigation Measure 3.8.3 Cultural Resources)*	Prior to Grading Permit	Planning Division	
25.	Prior to issuance of a grading permit, a certified professional paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting. A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities,	Prior to Grading Permit	Planning Division	

DRAFT

Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find. For the remaining portions of the Project site, if any paleontological resources (fossils) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist. The City			

DRAFT

29.	Traffic Control Plan prepared by a licensed civil/traffic engineer shall be submitted to the City Engineer for review and approval	Prior to Issuance of Encroachment Permit	Public Works Department	
Prior to the Issuance of Building Permit				
30.	Nonglare glass shall be used in all nonresidential buildings to minimize and reduce impacts from glare. Buildings that are allowed to use semi-reflective glass must be oriented so that the reflections of sunlight is minimized Types of nonglare glass shall be specified on final development plans. *(Mitigation Measure 3.5.1 Aesthetics, Light, and Glare)*	Prior to Building Permit	Building Division	
31.	**Asbestos**. Prior to the issuance of any permit for the demolition or alteration of existing structures(s), a letter shall be provided to the Planning Department from a qualified asbestos abatement consultant indicating that no asbestos-containing materials (ACM) are present in the building. If ACMs are found to be present, they will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 and all other applicable state and federal rules and regulations. **Led Paint**. Prior to issuance of any permit for the demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Eastvale Building Safety and Inspection Department. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations. **Polychlorinated Biphenyls**. Prior to issuance of a demolition permit, a polychlorinated biphenyls (PCB) abatement contractor shall conduct a survey of the project site to identify and assist with compliance with	Prior to Building Permit	Building Division

	applicable state and federal rules and regulations governing PCB removal and disposal. (Mitigation Measure 3.10.2a Hazards and Hazardous Materials)			
32.	**NOI PDF-1** The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls). **NOI PDF-2** For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum. **NOI PDF-3** The final building plans will ensure that HVAC units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements. To meet the City's noise standards the following measures should be followed: • All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses. • The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines. **NOI PDF-4**	Prior to Building Permit	Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Future residents, property management personnel, and commercial tenants will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. To help ensure compliance with the City's Noise Regulations, the following recommendations are provided: • Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.). • Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less. **NOI PDF-5** The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction noise levels. Examples of best management practices may include the following: • All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields). • Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible. • If feasible, electric hook-ups shall be provided to avoid the use of

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	anticipated. In that case the landscape contractor shall provide the soil fertility recommendations and soil management plan prior to the pre-job meeting on site.			
74.	No light fixture, electric transformer, fire detector check, fire hydrant, or other utilities shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures and utilities shall be identified on the grading and site plans. Utilities shall be screened appropriately with landscaping. Any trees that are determined to be in conflict through the design development process shall be relocated to keep the same quantities shown on the approved entitlement plan, this shall include adjusting, adding, and revising or creating additional planting areas to support the total required number.	Prior to Building Permit	Planning Division	
Prior/During Ground Disturbance and Construction				
75.	The City Landscape Architect shall be contracted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrihizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to initiation of landscape construction	Public Works Department+-	
Prior to Certificate of Occupancy				
76.	Water and electric meter for all CFD/LMD area shall be designed and located independently from non-CFD/non-LMD areas.	Prior to Final Certificate of Occupancy	Public Works Department	
77.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer.	Prior to Final Certificate of Occupancy	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
78.	The development shall be annexed into all applicable CFD and/or LMD for traffic signals, street lights, full capture systems for all storm drains and landscape maintenance of raised landscape median and public parkways, to the satisfaction of the City Engineer or otherwise from a district where one is not currently in place.	Prior to Final Certificate of Occupancy	Public Works Department	
79.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of type and format of digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Final Certificate of Occupancy	Public Works Department	
80.	Prior to issuance of a certificate of occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in conformance with approved plans and specifications, and as identified in the approved WQMP.	Prior to Final Certificate of Occupancy	Public Works Department	
81.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Final Certificate of Occupancy	Public Works Department	
82.	Construct a curb ramp meeting current California State Accessibility standards along both sides drive approaches and intersections. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided and shall adjust the location of the access ramps, if necessary to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to first Certificate of Occupancy	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
83.	Update the existing public street plans to meet the requirements of the proposed development as required by the City Engineer.	Prior to first Certificate of Occupancy	Public Works Department	
84.	Reconstruct Scholar Way to the centerline of the Street. Edge cuts shall line up with lane lines. No additional crown lines shall be added to any public street. All public streets shall have consistent cross slope.	Prior to first Certificate of Occupancy	Public Works Department	
85.	Reconstruct 58th Street to the centerline of the Street. Edge cuts shall line up with lane lines. No additional crown lines shall be added to any public street. All public streets shall have consistent cross slope.	Prior to first Certificate of Occupancy	Public Works Department	
86.	Construct a multipurpose trail, with striping, approved by the Public Works Department and Planning Division along the project perimeter on 58th Street and Scholar Way.	Prior to first Certificate of Occupancy	Public Works Department	
87.	Construct a 4' wide decomposed granite trail approved by the Public Works and Planning Division along the project perimeter of 58th street.	Prior to first Certificate of Occupancy	Public Works and Planning Division	
88.	Developer shall post performance and material bonds for its offsite street improvements.	Prior to first Certificate of Occupancy	Public Works Department	
89.	Install decorative streetlights with sleeves along 58th Street and Scholar Way as approved by the Public Works Division and Planning Division.	Prior to first Certificate of Occupancy	Public Works Department	
90.	As applicable to Phase C, install Class I bicycle lanes along Scholar Way and 58th Street.	Prior to first Certificate of Occupancy	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
91.	As applicable to Phase C, relocate all necessary traffic signals and/or signage and replace all necessary components to accommodate new street right-of-way along Scholar Way and 58th Street to the satisfaction of the City Engineer.	Prior to first Certificate of Occupancy	Public Works Department	
92.	Offsite street improvements along Scholar Way and 58th Street shall be completed prior to the first certificate of occupancy of Phase C.	Prior to first Certificate of Occupancy	Public Works Department	
93.	Prior to the issuance of the last certificate of occupancy in Phase B or the first certificate of occupancy in Phase C, whichever occurs first, all off-site street improvements shall be completed on Scholar Way and 58th Street.	Prior to last Certificate of Occupancy in Phase B or first Certificate of Occupancy in Phase C, whichever occurs first	Public Works Department	
94.	The Developer shall submit traffic striping and signage plans for the off-site improvements, prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All off-site Phase C base-pavement and temp striping shall be completed to the satisfaction of the City Engineer.	Prior to first Certificate of Occupancy	Public Works Department	
95.	Concurrent with each street improvement, install fiber optics conduit per City standard along property frontage and pull fiber through conduit along property frontage to support current and future synchronization, Intelligent Transportation Systems ("ITS"), and public safety upgrades to the satisfaction of the City Engineer. Connect to the existing pull boxes on Scholar and 58th from Phase A and Phase B.	Prior to first Certificate of Occupancy	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
96.	The development shall be designed to include pet and animal waste receptacles along pedestrian pathways. Final design shall be approved by the Community Development Director.	Prior to final Certificate of Occupancy	Planning Division	
97.	The final design of on and off-site amenities including, but not limited to benches, trashcans, bike racks, pet waste receptacles, lighting, playground equipment, art, furnishings, cabanas/shade structures, and outdoor play amenities, shall be approved by the City Engineer and Community Development Director	Prior to final Certificate of Occupancy	Planning and Public Works Divisions	
98.	All street lighting shall meet the equipment and illumination standards of the City to the satisfaction of the City Engineer.	Prior to first Certificate of Occupancy	Planning Division	
99.	Mailboxes shall be designed, installed and located by the developer to the satisfaction of the Community Development Director.	Prior to Certificate of Occupancy	Planning Division	
100.	The Applicant shall submit a set of development plans, including a lighting plan, to the Eastvale Police Department for review and approval for appropriate safety measures including, but not limited to, the following: PROPERTY GATES AND KNOX BOX ENTRY a. The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225.	Prior to first Certificate of Occupancy	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	ADDRESS NUMBERING: b. Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping). SECURITY AND LIGHTING PLAN c. Adequate crime prevention measures to assist with identifying any suspect(s) of any potential future vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of proposed construction. All exterior access points should be properly illuminated to make clearly visible any person on or about the premises during the hours of darkness. d. Residential units shall be equipped with solid core doors and quality dead bolt locking devices at entry points.			
101.	Improved and decorative paving shall be provided at vehicular entry points, intersections, and areas of pedestrian connections to the satisfaction of the Community Development director.	Prior to first Certificate of Occupancy	Planning & Public Works Divisions	
102.	Interior parking areas shall include one (1) tree planted for every five (5) parking spaces within parking areas	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
103.	The Applicant shall include a mix of larger tree sizes with the minimum size being 24" box for 50% of total trees provided, 36" box for 30% of total, and 48" box for 20% of total. Applicant shall include an overall chart breaking down quantities of trees versus sizes for verification.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
104.	Plant materials shall be installed from container sizes per the following size matrix – 10% -15 gallon, 30%- 5 gallon, and 60% - 1 gallon.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
105.	All trees shall be double staked with vinyl type ties nailed to the lodge pole stakes in at least two vertical locations. Trees in high wind corridors or trees requiring special support measures shall require additional staking and or specialized staking material as needed.	Prior to final Certificate of Occupancy	Planning Division	
106.	Planting shall offer horizontal and vertical variation in form, texture, and scale and shall include multiple species to prevent the loss of a monoculture of a single species from species specific pest or other cause.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
107.	Landscape plans shall be designed to include concrete mow curbs or other approved separations for areas of landscape where separations or changes in maintenance responsibility exist and for separating turf or groundcover from shrub areas.. This shall be clearly defined on the plans for the purposes of understanding maintenance responsibility.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
108.	Any trees that are in conflict shall be relocated to other areas of the site, subject to the review and approval of the Community Development Director	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
109.	All landscape and irrigation plans shall be consistent with the City of Eastvale Zoning Code, with Section 5.4 Landscaping General Provisions, the City of Eastvale Design Standards and Guidelines, and the City of Eastvale Chapter 14.24 Water Efficient Landscape	Prior to final Certificate of Occupancy	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Regulations, WUCOLS, and other current applicable codes and guides, in effect prior to May 11, 2022.			
110.	All required landscaping of Phase C shall be installed and verified prior to issuance of certificate of occupancy for the last residential unit of Phase C.	Prior to Certificate of Occupancy for last unit of Phase C	Planning Division	
111.	A minimum of ten percent (10%) of the parking area shall be landscaped. One tree shall be planted for every five (5) parking spaces within the parking area (tree diamonds may be used). Fifty percent of the trees shall be minimum size of fifteen (15) gallons and fifty percent of the trees shall be a minimum size of twenty-four (24) inch box, or as specified in the Master Plan	Prior to final Certificate of Occupancy	Planning Division	
112.	The applicant shall have the following items on permanent and prominent display in the construction office where applicable: a. A copy of the approved and recorded tract map; b. A copy of the approved Major Development Review plot plans; c. A copy of the approved landscape architecture plans; d. A copy of the approved residential parking management plan; e. A map showing the boundaries of those areas to be maintained by the Homeowners Association; f. Applicable Codes, Covenants, and Restrictions (CC&Rs).	Prior to first Certificate of Occupancy	Planning Division	
113.	The applicant shall submit to the City Engineer and Community Development Director for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document and shall contain language station compliance	Prior to first Certificate of Occupancy	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	with the Leal Master Plan and Eastvale Zoning Code as existing prior to May 11, 2022. This condition does not apply to city-owned or controlled parcels.			
114.	The CC&Rs shall address maintenance and operation of common areas and/or facilities including but not limited to, private parking areas, private utilities, and publicly maintained water quality basins. The CC&Rs shall also prohibit landscaping with H.O.A.-maintained areas from being modified, trimmed, or removed in any way by the homeowner, without express authorization by the H.O.A. This condition does not apply to city-owned or controlled parcels.	Prior to first Certificate of Occupancy	Planning Division	
115.	The project CC&Rs shall prohibit the use of dedicated covered resident parking for personal storage or any use other than for the parking of operable motor vehicles at all times to the satisfaction of the City Attorney and Community Development Director.	Prior to first Certificate of Occupancy	Planning Division	
116.	Parking restrictions resultant of minimum width streets, no overnight parking, and permit parking shall be identified in the project CC&Rs.	Prior to first Certificate of Occupancy	Planning Division	
117.	The applicant shall provide and future H.O.A shall enforce a parking management plan consistent with the Leal Master Plan Phase C Residential Parking Review and Parking Management Plan (PMP)- City of Eastvale, CA memorandum prepared by RK Engineering Group, Inc. dated August 13, 2026, for review and approval by the Community Development Director.	Prior to first Certificate of Occupancy	Planning Division	
Ongoing				
118.	The quality and ongoing maintenance of decomposed granite shall be to the satisfaction of the City Engineer	Ongoing	Planning and Public Works Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
119.	To reduce fugitive dust emissions, the contractor shall provide the City with sufficient proof of compliance with Rule 403 and other dust control measures including but not limited to: • Watering active sites three times daily. • Requiring the replacement of ground cover or the application of non-toxic soil stabilizers according to manufacturer specifications to unpaved roads and all inactive construction areas (previously graded areas inactive for 10 days or more, assuming no rain). • Requiring trucks entering or leaving the site hauling dirt, sand, or soil or other loose materials on public roads to be covered. • Suspending all excavating and grading operations when wind gusts (as instantaneous gust) exceed 25 miles per hour. • Posting contact information outside the property for the public to call if specific air quality issues arise; the individual charged with receipt of these calls shall respond to the caller within 24 hours and resolution of the air quality issue(s), if valid, or implementation of corrective action(s) will occur within 48 to 72 hours of the time that the issues first arose. • Sweeping of streets using SCAQMD Rule 1186 and 1186.1 certified street sweepers or roadway washing trucks (utilizing recycled water if it becomes available) at the end of the day if visible soil material is carried over to adjacent streets. • Posting and enforcement of traffic speed limits or 15 miles per hour or less on all unpaved roads. • Installing wheel washers or gravel pads at construction entrances where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip to prevent track-out.	Ongoing (during project construction)	Building and Public Works Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Paving of all roadways, driveways, sidewalks, etc., shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless soil stabilizers are used.			
120.	All HOA maintained landscaping shall be perpetually maintained and be in a healthy and thriving manner consistent with the approved construction landscape plans. Any changes and modifications made to the approved landscape design and ground coverage shall be required to reviewed and approved by the Community Development Director.	Ongoing	Planning and Code Enforcement Divisions	
121.	All HOA amenities (such as but not limited to mailboxes, trashcans, landscape, lighting, signage, etc.) shall be continually maintained and operational in a manner consistent with the approved plans to the satisfaction of the Community Development Director.	Ongoing	Planning and Code Enforcement Divisions	
122.	Provide street sweeping services for onsite and offsite within project frontages as needed or required by the City Engineer.	Ongoing	Public Works Department	
123.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	Ongoing	Public Works Department	
124.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Ongoing	Public Works Department	
125.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction (“Greenbook”). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until	Ongoing	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	permanent cap paving occurs using an acceptable surface course material.			
126.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as referenced in Section 12.08.260 of the Eastvale Municipal Code.	Ongoing	Public Works Department	
127.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	Ongoing	Public Works Department	
128.	Construction signing, lighting, and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of the latest California Manual on Uniform Traffic Control Devices ("CA MUTCD"), or subsequent editions in effect at the time of construction.	Ongoing	Public Works Department	

DRAFT

129.	Street improvements for Scholar Way and 58th Street contiguous to Phase C and shall be included in one performance bond (Phase C Off-Site Performance Bond) prior to the first building permit in Phase C.	Ongoing	Public Works Divisions	
Jurupa Community Services District (JCSD)				
130.	This project will be subject to compliance with Jurupa Community Services District's (District) rules, regulations, conditions, requirements, and payment of applicable fees for the proposed project.	Prior to Building Permit	JCSD	
131.	The applicant is required to coordinate with Jurupa Community Services District during the entire development process for their project. The District provided a Board of Directors approved water and sewer availability letter dated 5/23/2023.	Prior to Building Permit	JCSD	
132.	The developer shall submit the final engineering plans for water, sewer, and recycled water facilities for JCSD's review and approval to serve the project areas. JCSD requires the water system to be looped. The Developer shall install master water meters and submeters for each unit. The project also requires the implementing of JCSD's new AMI meter technology and program. The District will not maintain water or sewer laterals or facilities within the project because the interior streets are proposed to be private streets.	Prior to Building Permit	JCSD	
133.	The proposed project will be required to participate in the final adopted recycled water program to provide a recycled water supply source and related infrastructure improvements for parks and landscaping areas. This process includes coordination and approval from the Division of Drinking Water in the State Water Resources Control Board.	Prior to Building Permit	JCSD	
134.	The proposed project will be required to participate in the final adopted recycled water program to provide a recycled water supply source and related infrastructure improvements for the landscaping areas in the	Prior to Building Permit	JCSD	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	public right-of-way. This process includes coordination and approval from the Division of Drinking Water (DDW) in the State Water Resources Control Board (SWRCB). Typically, DDW requires the following plans as a part of their review and approval process: • Recycled Water Use Exhibit/Colored Map • Piping Plan showing the horizontal and vertical separation between potable and recycled water pipelines • Landscaping and irrigation Plans. • Civil Plans			
135.	The applicant is required to work with JCSD Finance Department to finalize all financial assurances, such as CFD Amendment, Letter of Credit and Surety Bond, before the District will sign the engineering plans for the Phase C Planning Areas.	Prior to Building Permit	JCSD	
Riverside County Fire Department				
136.	Fire Protection Water Supplies/Fire Flow – Minimum fire flow for the construction of all buildings is required per CFC Appendix B. A reduction of up to 50% in the required fire flow is permitted for buildings equipped with automatic fire sprinklers in accordance with the City Municipal Code. Prior to building permit issuance, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. On-site water supply must be available and operational before any combustible materials are placed on the construction site. Specific design features may increase or decrease the required fire flow. a. Will Serve Letters from the responsible water purveyor are required prior to map recordation.	Prior to Building Permit Issuance	Riverside County Fire Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
137.	Fire Protection Water Supplies/Hydrants – The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with CFC Appendix C and NFPA 24. Fire hydrants shall be located no more than 400 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road. In areas where new water mains are extended along streets and hydrants are not needed for protection of structures, standard fire hydrants shall be provided at spacing not to exceed 1,000 feet along streets for transportation hazards. Fire hydrants shall be at least 40 feet from the building they are serving. A fire hydrant shall be located within 20 to 100 feet of the fire department connection for buildings protected with a fire sprinkler system. Hydrants must have at least one 4" and one 2 ½" connection (Standard Hydrants).	Prior to Building Permit Issuance	Riverside County Fire Department	
138.	Tract Water Plans – Prior to building permit issuance, the applicant/developer shall furnish the water system fire hydrant plans to Fire Department for review and approval. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval.	Prior to Building Permit Issuance	Riverside County Fire Department	
139.	Fire apparatus access roads – Fire apparatus access roads shall comply with the Development Agreement recorded July 27, 2022. Fire apparatus access roads shall be provided within 150 feet of all exterior portions of buildings. Fire apparatus access roads shall have an unobstructed vertical clearance not less than 13 feet and 6 inches. Fire apparatus access roads must be designed to withstand the weight of 80,000 thousand pounds. Apparatus weight is distributed as 55,000	Prior to Building Permit Issuance	Riverside County Fire Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	pounds on tandem rear axles and 25,000 pounds on the front axle. Fire apparatus access road grade must not exceed 16%, and the cross slope must not exceed 2.5%. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6% grade change for 25 feet of approach/departure. Fire apparatus access roads shall have a turning radius capable of accommodating fire apparatus. Road base without an appropriate topping or binding material does not satisfy the all-weather requirement. A. Fire Lane marking: Identification and marking of fire lanes, including curb details and signage, shall comply with all Riverside County Fire Department Standards.			
140.	Dead-end fire apparatus access roads – Dead-end fire apparatus access roads more than 150 feet in length shall be provided with an approved turnaround.	Prior to Building Permit Issuance	Riverside County Fire Department	
141.	Inside and Outside Turning Radii – The access road shall comply with the Development Agreement recorded July 27, 2022, and shall have a minimum inside turning radius of 24 feet and a minimum outside turning radius of 45 feet. Because fire apparatus cannot negotiate tight "S" curves, a minimum 60-foot straight leg shall be provided between compound turns, or the turning radii and/or road width shall be increased accordingly.	Prior to Building Permit Issuance	Riverside County Fire Department	
142.	Traffic Calming Devices Prohibited – Traffic Calming Devices that delay emergency response are prohibited. Requests to install traffic calming road designs or devices on fire apparatus access roads must be submitted to the Fire Department for review and approval prior to installation.	Prior to Building Permit Issuance	Riverside County Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
143.	Fire and Life Safety Requirements – Final fire and life safety conditions will be addressed when the Fire Department reviews any subsequent submittals. These conditions will be based on California Fire Code (CFC), California Building Code (CBC), and related codes/standards adopted and amended at the time of construction plan submittal.	Prior to Building Permit Issuance	Riverside County Fire Department	
144.	Landscape Plan Review – Prior to building permit issuance, the applicant or developer must submit landscape plans to the Fire Department for review and approval. The plans must demonstrate that all trees, shrubs, palms, and other vegetation at mature size will not obstruct fire department laddering access, aerial apparatus operations, roof access, or fire apparatus reach to any portion of the buildings.	Prior to Building Permit Issuance	Riverside County Fire Department	
145.	Phased Construction – If construction is to be phased, a Construction Phasing Plan shall be submitted to the Fire Department for review and approval prior to building permit issuance for each phase of construction. Each construction shall maintain fire access.	Prior to Building Permit Issuance	Riverside County Fire Department	
146.	Residential Fire Sprinklers – Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Fire Department for review and be approved prior to installation.	Prior to Building Permit Issuance	Riverside County Fire Department	
147.	Gate Access – All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. These gates shall be provided with access to gate equipment or another method to open the gate if there is a power failure. (Manual gates shall not be locked unless a Knox padlock or Knox Box containing the key to the lock is	Prior to Building Permit Issuance	Riverside County Fire Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	installed in an approved location on the approach side of the gate). A pedestrian gate, if used to provide access, shall be a minimum 3 feet wide and provided with a Knox Box/Padlock if locked. Upon installation of the system, compliance testing shall be completed by the Riverside County Fire Department.			
148.	Building Address Numbers – The location of address numbers shall be indicated on the building plans. Street numbers shall be displayed in a prominent location on the street or fire apparatus access side of buildings. Numbers and letters shall be a minimum of 12" in height with a minimum stroke of .05 inch. Where access is by means of a private road and the building cannot be viewed from a public way, a monument, pole, or other sign shall be used to identify the structure. Address must be legible, of a contrasting color, and illuminated either internally or externally to be visible from the street at all hours.	Prior to Building Permit Issuance	Riverside County Fire Department	
General **Riverside County Flood Control District**				
149.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Eastvale Master Drainage Plan, Lines D-3 and Eastvale MDP-Eastwalk Storm Drain (See PA7C, PA12B, and PA12C proposed connections). If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.	Prior to Encroachment Permit	Riverside County Flood Control District	
150.	This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation, or other final approval should not be	Prior to Encroachment Permit	Riverside County Flood	

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	given until the City has determined that the project has been granted a permit or is shown to be exempt. If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans, and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation, or other final approval of the project and a Letter of Map Revision (LOMR) prior to occupancy. The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply.		Control District	

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

DRAFT

Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

DRAFT

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN25-20087– Major Development Reviews (DR) for the overall site planning, master landscaping, streetscape design, and open space amenities of the Leal Master Plan (Phase C), located at the northwest corner of Limonite Avenue and Hamner Avenue.
Assessor's Parcel Number: 164-030-052
Planning Commission Date September 16, 2026
Planning Commission Approval:

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	Acceptance of the Conditions of Approval is subject to, and does not waive, applicant's ability to protest or challenge any fees, dedications, reservations or other exactions imposed by the City on the project in the manner provided for in the Government Code Section 66020, as noted below or under State Law. The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. The signed statement of acceptance is required and must be returned to the Planning Division prior to submittal for Building and Grading Permits. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
3.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the **Project**.	Ongoing	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
4.	PLN25-20087 is granted for the time period as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
5.	All applicable Major Development Review, Tentative Tract Map 38290, and Development Agreement conditions of approval for PLN21-20039 shall be incorporated herein by reference.	Ongoing	Planning Division	
6.	The project shall be developed in accordance with the Major Development Review applications approved by the Planning Commission on September 16, 2026, including the approved site plan, architectural elevations, conceptual landscape plans, etc. The applicant may request modifications or revisions to the approved project as outlined in Section 120.01.050(2) of the Eastvale Zoning Code, as existing prior to May 11, 2022.	Ongoing	Planning Division	
7.	As applicable, conditions of approval for Tentative Tract Map 38596 shall be incorporated herein by reference.	Ongoing	Planning and Public Works Departments	
8.	The cover sheet of the building construction drawings shall include a blue line print of the City's conditions of approval and shall be attached to each set of plans submitted for City approval.	Ongoing	Planning Division	
9.	The applicant's deposit account with Public Works shall have a balance of at least $10,000 to cover staff time to follow-up, monitoring, and other post approval work by staff. The City reserves the right to request additional deposits to cover post approval staff work and to half work if the deposit account is exhausted.	Ongoing	Public Works Department	
Fees				
10.	Pursuant to Sections 3.2.2 and 4.1.6.1 of Development Agreement No. 003, applicant shall pay the development impact fees in effect at the time building permits are issued, excluding the Parkland Improvement Impact fee and the	Prior to Building Permit Issuance unless deferred pursuant to	Building Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Community and Recreation Center Impact Fee. For informational purposes, the current impact fee amounts applicable to the project and listed below can be found at https://portal.laserfiche.com/Portal/DocView.aspx?id=209182&repo=r-78788824. City Hall Impact Fee Police Station Impact Fee Fire Department Facilities Impact Fee Library Impact Fee The park, open space and recreation improvement requirements applicable to the project are set forth in Section 4.1.6.1 and Exhibit E of Development Agreement No. 003 and applicant shall provide parkland and parkland improvements, or fees in lieu thereof, in compliance with the terms of Development Agreement No. 003.	Eastvale Municipal Code Section 110.28.050B		
11.	Excluding the regional pass-through fees in conditions of approval 11 and 12, the applicant may protest any fees, dedications, reservations, or other exactions imposed by the City on the project in the manner provided for in Government Code Section 66020. Any protest of the impact fees in condition of approval 7 above, or any other fees, dedications, reservations, or other exactions imposed by the City on the project through these conditions of approval other than the regional pass-through fees in conditions of approval 11 and 12, must be filed within 90-days of the date of the conditional approval of Tentative Map 38596. The applicant is not required to file an appeal of a condition of approval imposing	90 days from Tentative Tract Map 38596 approval	Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	any fees, dedications, reservations, or other exactions under Eastvale Municipal Code Sections 120.02.010(c)(7) and 120.01.40 in addition to a protest under this condition of approval. The acknowledges that the Applicant is relying upon this representation in not filing any appeal to the City Council to contest these fees.			
12.	In accordance with Government Code Section 66006(e), the Applicant is hereby notified of the right to file with the City Clerk: (a) a request for an audit of the City's development impact fees in accordance with Government Code Section 66023; and (b) a written request for mailed notices of the City's public meetings to review annual reports of development impact fees under Government Code Section 66006(b)(1).		Building Division	
13.	RBBD fees in effect at the time the applicant submitted its SB 330 preliminary application shall be paid prior to Certificate of Occupancy, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d).	Prior to final Certificate of Occupancy	Public Works Department	
14.	TUMF fees in effect at the time the applicant submitted its SB 330 preliminary application shall be paid prior to Certificate of Occupancy, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d). The applicant may appeal TUMF fees in accordance with the provisions for an appeal set forth in the TUMF Administrative Plan and any other applicable WRCOG procedures and requirements.	Prior to final Certificate of Occupancy	Public Works Department	
15.	MSHCP fees in effect at the time the applicant submitted its SB 330 preliminary application, as such fees may be adjusted pursuant to Government Code Section 65589.5(o)(2)(A), shall be paid prior to Building permit issuance, unless applicant revises the project in a manner that results in a loss of SB 330	Prior to Building Permit Issuance	Planning Division and Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	preliminary application rights as provided in Government Code Section 65941.1(d). The applicant may appeal MSHCP fees in accordance with applicable WRC-RCA procedures and requirements.			
Prior to Map Recordation (TTM 38596)				
16.	Right-of-way as shown on TTM38596 along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as requested by the City Engineer.	Prior to Map Recordation	Public Works Department	
17.	All public road dedications as part of this Conditions of Approval shall utilize the following design criteria to the satisfaction of the City Engineer: • 11 feet for left/right turn pockets • 12 feet for general purpose travel lanes • 14 feet for general purpose travel lanes adjacent to the right curb • 14 feet for right turn pocket • Scholar Way shall be designed to match the existing improvements constructed with Phase A to the south.	Prior to Map Recordation	Public Works Department	
18.	If not already constructed by a previous phase, backbone streets shall consist of 76’ of right-of-way developed as follows: 2’ of landscaping, an 11’ concrete dual-purpose trail (evenly delineated by striping), 7’ of landscaping, 36’ for two (2) general purpose travel lanes, 7’ of landscaping, and 5’ concrete sidewalk, and 8’ of landscaping.	Prior to Map Recordation	Public Works Department	
19.	Provide plans (landscape, grading, etc.) showing a multipurpose trail/Class I trail/linear park fronting the property along 58th Street and Scholar Way.	Prior to Map Recordation	Public Works Department

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
Prior to the Issuance of Grading Permit				
20.	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project- specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations-generated air toxic pollutant mitigation measures may include but not be limited to: Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible. Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle City of Eastvale Page 21 Leal Master Plan EIR Addendum No. 1 Idling Emission Reduction Program. Restricting the number of daily heavy-duty haul truck deliveries. *(Mitigation Measure 3.3.5b Air Quality)*	Prior to Grading Permit	Planning, Building and Safety, or Public Works Division	
21.	The following Addendum No.1 to the Leal Master Plan EIR mitigation measures shall be implemented and specified on all project construction plans:	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May (Municipal Code Chapter 8.52, Noise Regulation). All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. Construction equipment staging areas shall be centrally located on the project site or located at the farthest distance possible from nearby residential land uses. All motorized construction equipment and vehicles shall be turned off when not in use. *(Mitigation Measure 3.6.4 Noise)*			
22.	MM 3.7.1 All construction and clearing activities shall be conducted outside of the avian nesting season (January 15– August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate,	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged. *(Mitigation Measures 3.7.1 Biological Resources)*			
23.	If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery. The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of cultural resources. *(Mitigation Measure 3.8.2 Cultural Resources)*	Prior to Grading Permit	Planning Division	
24.	If human remains are discovered during any ground-disturbing activities in the project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and I shall be followed. *(Mitigation Measure 3.8.3 Cultural Resources)*			
25.	Prior to issuance of a grading permit, a certified professional paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting. A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area. In consultation with the qualified paleontologist the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared.	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find. For the remaining portions of the Project site, if any paleontological resources (fossils) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist. The City shall consider the mitigation recommendations of the qualified paleontologist for any unanticipated discoveries of paleontological resources. The City and the project applicant shall consult and agree on implementation of a measure or measures that the City deems feasible and appropriate. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of paleontological resources. *(Mitigation Measure 3.8.4 Cultural Resources)*			
26.	The project applicant shall conduct a Phase II ESA and shall follow its recommendations to remediate any potentially contaminated soil or groundwater. On-site contaminants must be addressed to the satisfaction of either Cal/EPA or the Riverside County Waste Management Department, with their approval of completion of activities/remedial action plans (RAP) submitted to the Eastvale Department of Building and Construction prior to the issuance of a grading permit.	Prior to Grading Permit	Building and Planning Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	(Mitigation Measure 3.10.2b Hazards and Hazardous Materials)			
27.	All trash and debris observed on-site shall be removed prior to construction activities and disposed of at a landfill or approved dumpsite. *(Mitigation Measure 3.10.2c Hazards and Hazardous Materials)*	Prior to Grading Permit	Building and Planning Divisions	
Prior to the Issuance of Encroachment Permit				
28.	Landscape plans for all landscaping improvements within existing or future right-of-way shall be submitted to the Public Works and Planning Division for review and approval	Prior to Issuance of Encroachment Permit	Planning Division Department	
29.	Traffic Control Plan prepared by a licensed civil/traffic engineer shall be submitted to the City Engineer for review and approval	Prior to Issuance of Encroachment Permit	Public Works Department	
Prior to the Issuance of Building Permit				
30.	Nonglare glass shall be used in all nonresidential buildings to minimize and reduce impacts from glare. Buildings that are allowed to use semi-reflective glass must be oriented so that the reflections of sunlight is minimized Types of nonglare glass shall be specified on final development plans. *(Mitigation Measure 3.5.1 Aesthetics, Light, and Glare)*	Prior to Building Permit	Building Division	
31.	**Asbestos**. Prior to the issuance of any permit for the demolition or alteration of existing structures(s), a letter shall be provided to the Planning Department from a qualified asbestos abatement consultant indicating that no asbestos-containing materials (ACM) are present in the building. If ACMs are found to be present, they will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 and all other applicable state and federal rules and regulations.	Prior to Building Permit	Building Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Led Paint. Prior to issuance of any permit for the demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Eastvale Building Safety and Inspection Department. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations. **Polychlorinated Biphenyls**. Prior to issuance of a demolition permit, a polychlorinated biphenyls (PCB) abatement contractor shall conduct a survey of the project site to identify and assist with compliance with applicable state and federal rules and regulations governing PCB removal and disposal. (Mitigation Measure 3.10.2a Hazards and Hazardous Materials)			
32.	**NOI PDF-1** The Project will comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls). **NOI PDF-2** For proper acoustical performance, all exterior windows, doors, and sliding glass doors will have a positive seal and leaks/cracks must be kept to a minimum. **NOI PDF-3** The final building plans will ensure that HVAC units are not located within an area of the Project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Eastvale Municipal Code requirements.	Prior to Building Permit	Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	To meet the City's noise standards the following measures should be followed: • All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses. • The combined noise level of all units operating simultaneously shall not exceed the City of Eastvale daytime and nighttime exterior standards at the nearest surrounding property lines. **NOI PDF-4** Future residents, property management personnel, and commercial tenants will be required to comply with the City of Eastvale Municipal Code Noise Regulations, Chapter 8.52, which specify that no person shall create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. To help ensure compliance with the City's Noise Regulations, the following recommendations are provided: • Deliveries, loading and unloading activities, and trash pick-up hours should be limited to daytime hours only (8 a.m. – 10 p.m.). • Limit engine idling time for all delivery vehicles and moving trucks to 5 minutes or less. **NOI PDF-5** The Project will prepare a construction management plan and obtain a construction work permit from the City of Eastvale prior to starting construction. The construction management plan will ensure all contractors implement construction best management practices to reduce construction			

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	noise levels. Examples of best management practices may include the following: • All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields). • Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible. • If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load. • Use electric air compressors and similar power tools rather than diesel equipment, where feasible. • Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible. • Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes. • Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator. • Construction activities shall not take place between the hours of 6:00 p.m.			

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	and 6:00 a.m. during the months of June through September and 6:00 p.m. to 7:00 a.m. during the months of October through May. **NOI PDF-6** The Project will not include pile driving or blasting activities during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment will be conducted prior to start of any activity.			
33.	All construction shall comply with the most recently adopted City and State building codes: • 2025 California Building Code • 2025 California Residential Code • 2025 California Electrical Code • 2025 California Mechanical Code • 2025 California Plumbing Code • 2025 California Fire Code • 2025 California Green Code	Prior to building permit issuance	Building Division

34.	Special Inspections – As indicated by California Building Code Section 1704, the owner shall employ one or more special inspectors who shall provide special inspections when required by CBC section 1704.	Prior to building permit issuance	Building Division	
35.	The Title Sheet of the plans shall include: • Occupancy Group • Occupant Load • Description of use • Type of Construction • Height of Building • Floor area of building(s) and/or occupancy group(s)	Prior to Building Permit	Building Division	
36.	School impact fees shall be paid prior to building permit issuance.	Prior to Building Permit	Building Division	
37.	Dimensioned building setbacks and property lines, street centerlines, and between buildings or other structures shall be dimensioned on the plot plan.	Prior to Building Permit	Building Division	
38.	The plot plan must show all property lines and easements, and a statement stating that such lines and easements are shown is required.	Prior to Building Permit	Building Division	
39.	The project design will conform to energy conservation measures articulated in Title 24 of the California Code of Regulations and address measures to reduce energy consumption, such as flow restrictions for toilets, low consumption light fixtures, and insulation. It shall also use drought tolerant landscaping to the extent feasible.	Prior to Building Permit	Building Division	
40.	Per the Business and Professions Code, a design professional will be required to prepare plans for proposed improvements at the time of construction drawings.	Prior to Building Permit	Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
41.	Public and private site improvements shall be designed in accordance with the American with Disabilities Act and Chapter 11 of the California Building Code. The site plan shall include a site accessibility plan identifying exterior routes of travel and detailing running slopes, cross slope, width, pedestrian ramp, curb ramps, handrails, signage, and truncated domes. Path of travel shall be provided from the public right-of-way and accessible parking to the building. The design professional shall ensure that the site accessibility plan is in compliance with the latest Federal and State regulations.	Prior to Building Permit	Building Division	
42.	The Developer shall provide Will-Serve Letters from all utility agencies.	Prior to Building Permit	Public Works Department	
43.	The developer shall connect to the JCSD sewer system and apply for a sewer connection account with JCSD.	Prior to Building Permit	Public Works Department	
44.	Submit California registered civil engineer prepared sewer improvement plans to the JCSD/Engineering Division. The plans shall be JCSD approved prior to issuance of any building permits.	Prior to Building Permit	Public Works Department	
45.	The developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property.	Prior to Building Permit	Public Works	
46.	All street improvements including curb, gutter, and street improvements to meet applicable City standards.	Prior to Building Permit	Public Works Department	
47.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison ("SCE") for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into	Prior to Building Permit	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").			
48.	The developer shall prepare an address blocking exhibit with the proposed addressing and street names for review and approval by the Planning Division. This plan, including updates to the plan, shall include addressing for buildings (primary address and units) and utilities such as but not limited to electrical/water/single/dual irrigation meter pedestal(s) or temporary power poles.	Prior to Building Permit	Planning and Building Division	
49.	Construction and architectural detailing shall be in substantial conformance with the approved plans (i.e., PLN25-20087), including but not necessarily limited to elevation drawings and material/colors sample board submitted as a part of this application and as approved by the Planning Commission, except that any modification shall be subject to the discretion of the Community Development Director upon finding that any changes are comparable in substance and quality to the original approval.	Prior to building permit	Planning Division	
50.	Any future modification to the colors and materials approved by the Planning Commission shall be subject to review and approval by the Community Development Director. At the Community Development Director's discretion, proposed color and material modification may be referred to the Planning Commission for Major Development Plan review.	Prior to Building Permit	Planning Division	
51.	Any future monumentation into the development shall be subject to review and approval by the Community Development Director and City Engineer.	Prior to Building Permit	Planning & Public Works Divisions	
52.	All signs shall be in conformance with Section 120.05.070 Signs of the Eastvale Zoning Code and Chapter 4.4 Signage of the Leal Master Plan, as existing prior to May 11, 2022.	Prior to Building Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
53.	All required parking area spaces shall meet the minimum dimensions of the Zoning Code Section 120.05.060, as existing prior to May 11, 2022.	Prior to Building Permit	Planning Division	
54.	All off and on-site lighting shall be decorative in nature. Final designs shall be approved by the City Engineer and Community Development Director.	Prior to Building Permit	Planning and Public Works Divisions	
55.	The master conceptual wall and fence plans approved by the Planning Commission as part of PLN25-20087-20095 shall serve as the master plan of development for community walls and fences within PA-7B, PA-7C, PA 12A, and PA-12B, PA-12C, PA-13A, PA-13B, and PA-13C. The final design and location of project walls and fences shall be subject to review and approval of the Community Development Director.	Prior to Building Permit	Planning Division	
56.	Wall and fences shall meet the requirements of the Eastvale Zoning Code and Leal Master Plan, as existing prior to May 11, 2022. Block walls and fencing shall be appropriately finished with decorative capping and blocks subject to review and approval of the Community Development Director. Wall and fencing plan (or supplemental plan) shall distinguish patio/courtyard boundaries and identify public/open space vs. private areas. Subject to the Community Development Director, additional fencing and walls may be required for purposes of security and safety.	Prior to Building Permit	Planning Division	
57.	Landscape construction plans shall be submitted to the Planning Division for final review and approval. The plans shall be consistent with the Conceptual Landscape Plan approved by the Planning Commission on **September 16, 2026**. The plan shall be certified by a licensed landscape architect as required, taking into account approved preliminary landscape plan (if any), adopted plant palette guides, applicable scenic and master/specific plan requirements, and water conservation measures.	Prior to Building Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	This submittal shall be made to the Planning Division with the appropriate application and fee.			
58.	The Applicant shall provide retaining solutions for any slopes that are above 2-1 adjacent to ROW areas to prevent any erosion into backbone planting areas.	Prior to Building Permit	Planning & Public Works Divisions	
59.	The Applicant shall include sight lines at all vehicular exits for verification of clear sight lines regarding proposed planting. Final locations shall be approved prior to any planting with coordination from the Engineering department. Trees planted without review and or approval shall be the applicant's responsibility to adjust, move, and or remove as required.	Prior Building Permit	Planning & Public Works Divisions	
60.	Landscape construction plans shall be designed to match and align with current WQMP and Best Management Practices (BMP) Facilities. Plans shall be designed to reviewed to ensure improvements will not conflict with underground structures, depressed basin, or park improvements	Prior to Building Permit	Planning & Public Works Divisions	
61.	Landscape and civil construction plans shall be designed with any updated base (per the WQMP and BMP's) information. Applicant to include all maintenance access points such as vaults, manholes, etc. to verify their impact on planter areas.	Prior to Building Permit	Planning & Public Works Divisions	
62.	Overall landscape square footage and corresponding percentage (versus total developed area) shall be provided for verification of meeting city minimum objective standards.	Prior to Building Permit	Planning & Public Works Division	
63.	To the extent tree species health and integrity are prioritized, mature specimen trees in 36-inch and/or 48-inch boxes shall be provided at prominent project entry statements and at major focal areas to the satisfaction of the Community Development Director.	Prior to Building Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
64.	Root barriers shall be installed for all trees planted within 5 feet of hardscape or surrounded within 5 feet of hardscape, including paving, walls/ structures, and trees within tree wells. All trees requiring root barriers shall extend 10' from the center of the trunk in either direction or be fully encircled at edge of hardscape if in a tree well and be a minimum of 24" deep.	Prior to Building Permit	Planning Division	
65.	All irrigation in shrub areas shall be designed and installed using drip irrigation wherever possible. A weather-based smart irrigation controller shall be installed that measures evapo-transpiration. A rain shut off device shall be installed free of overhead obstruction and connected with the irrigation controller in addition to a master valve, flow sensor and separate Landscape water meter are required in addition to the above for all projects with landscape areas above 2500 square feet.	Prior to Building Permit	Planning Division	
66.	All plants shall be hydrozoned from low to medium water use according to WUCOLS IV as a general guide.	Prior to Building Permit	Planning Division	
67.	Suggested irrigation and planting maintenance schedules shall be included for compliance with MWELO requirements.	Prior to Building Permit	Planning Division	
68.	A soil management plan shall be included for compliance with MWELO requirements.	Prior to Building Permit	Planning Division	
69.	Any plans that include areas to be classified as a Landscape Maintenance District, Communities Facility District, and or similar instrument to be maintained by the City shall be required to meet the most current Riverside County Transportation and Land Management Agency- Standards and Specifications (https://trans.rctlma.org/landscaping) per Public Works direction.	Prior to Building Permit	Planning Division	
70.	The above-described plans shall be in substantial conformance with the adopted city ordinances and or requirements as approved by the City	Prior to Building Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Landscape Architect, City Planning Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.			
71.	City required inspection schedule and signature block shall be included in the plans and be located on the tittle sheet.	Prior to Building Permit	Planning Division	
72.	All fertilizers and soil amendments used during planting preparation and installation shall be derived from organic based materials as a best management practice for storm water source control. Mycorrhizae and humate shall be incorporated into each plant pit in accordance with the manufacturer's specifications and the recommendations of the soil management plan.	Prior to Building Permit	Planning Division	
73.	A copy of the soil fertility recommendations and soil management plan specified using organic fertilizers and soil amendments shall be included on the first submittal of the landscape plans unless extensive grading is anticipated. In that case the landscape contractor shall provide the soil fertility recommendations and soil management plan prior to the pre-job meeting on site.	Prior to Building Permit	Planning Division	
74.	No light fixture, electric transformer, fire detector check, fire hydrant, or other utilities shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. All overhead light fixtures and utilities shall be identified on the grading and site plans. Utilities shall be screened appropriately with landscaping. Any trees that are determined to be in conflict through the design development process shall be relocated to keep the same quantities shown on the approved entitlement plan, this shall include adjusting, adding, and revising or creating additional planting areas to support the total required number.	Prior to Building Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
Prior/During Ground Disturbance and Construction				
75.	The City Landscape Architect shall be contracted to meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations utilizing humate, mycorrihizae, and organic fertilizer shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.	Prior to initiation of landscape construction	Public Works Department+-	
Prior to Certificate of Occupancy				
76.	Water and electric meter for all CFD/LMD area shall be designed and located independently from non-CFD/non-LMD areas.	Prior to Final Certificate of Occupancy	Public Works Department	
77.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer.	Prior to Final Certificate of Occupancy	Public Works Department	
78.	The development shall be annexed into all applicable CFD and/or LMD for traffic signals, street lights, full capture systems for all storm drains and landscape maintenance of raised landscape median and public parkways, to the satisfaction of the City Engineer or otherwise from a district where one is not currently in place.	Prior to Final Certificate of Occupancy	Public Works Department	
79.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of type and format of digital data to be submitted to the City may be authorized, upon prior City Engineer approval.	Prior to Final Certificate of Occupancy	Public Works Department	
80.	Prior to issuance of a certificate of occupancy or final City approvals, demonstrate that all structural BMP's have been constructed and installed in	Prior to Final Certificate of Occupancy	Public Works Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	conformance with approved plans and specifications, and as identified in the approved WQMP.			
81.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Final Certificate of Occupancy	Public Works Department	
82.	Construct a curb ramp meeting current California State Accessibility standards along both sides drive approaches and intersections. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided and shall adjust the location of the access ramps, if necessary to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to first Certificate of Occupancy	Public Works Department	
83.	Update the existing public street plans to meet the requirements of the proposed development as required by the City Engineer.	Prior to first Certificate of Occupancy	Public Works Department	
84.	Reconstruct Scholar Way to the centerline of the Street. Edge cuts shall line up with lane lines. No additional crown lines shall be added to any public street. All public streets shall have consistent cross slope.	Prior to first Certificate of Occupancy	Public Works Department	
85.	Reconstruct 58th Street to the centerline of the Street. Edge cuts shall line up with lane lines. No additional crown lines shall be added to any public street. All public streets shall have consistent cross slope.	Prior to first Certificate of Occupancy	Public Works Department	
86.	Construct a multipurpose trail, with striping, approved by the Public Works Department and Planning Division along the project perimeter on 58th Street and Scholar Way.	Prior to first Certificate of Occupancy	Public Works Department	
87.	Construct a 4' wide decomposed granite trail approved by the Public Works and Planning Division along the project perimeter of 58th street.	Prior to first Certificate of Occupancy	Public Works and Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
88.	Developer shall post performance and material bonds for its offsite street improvements.	Prior to first Certificate of Occupancy	Public Works Department	
89.	Install decorative streetlights with sleeves along 58th Street and Scholar Way as approved by the Public Works Division and Planning Division.	Prior to first Certificate of Occupancy	Public Works Department	
90.	As applicable to Phase C, install Class I bicycle lanes along Scholar Way and 58th Street.	Prior to first Certificate of Occupancy	Public Works Department	
91.	As applicable to Phase C, relocate all necessary traffic signals and/or signage and replace all necessary components to accommodate new street right-of-way along Scholar Way and 58th Street to the satisfaction of the City Engineer.	Prior to first Certificate of Occupancy	Public Works Department	
92.	Offsite street improvements along Scholar Way and 58th Street shall be completed prior to the first certificate of occupancy of Phase C.	Prior to first Certificate of Occupancy	Public Works Department	
93.	Prior to the issuance of the last certificate of occupancy in Phase B or the first certificate of occupancy in Phase C, whichever occurs first, all off-site street improvements shall be completed on Scholar Way and 58th Street.	Prior to last Certificate of Occupancy in Phase B or first Certificate of Occupancy in Phase C, whichever occurs first	Public Works Department	
94.	The Developer shall submit traffic striping and signage plans for the off-site improvements, prepared by a California registered Civil Engineer, for review	Prior to first Certificate of Occupancy	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	and approval by the City Engineer. All off-site Phase C base-pavement and temp striping shall be completed to the satisfaction of the City Engineer.			
95.	Concurrent with each street improvement, install fiber optics conduit per City standard along property frontage and pull fiber through conduit along property frontage to support current and future synchronization, Intelligent Transportation Systems ("ITS"), and public safety upgrades to the satisfaction of the City Engineer. Connect to the existing pull boxes on Scholar and 58th from Phase A and Phase B.	Prior to first Certificate of Occupancy	Public Works Department	
96.	The development shall be designed to include pet and animal waste receptacles along pedestrian pathways. Final design shall be approved by the Community Development Director.	Prior to final Certificate of Occupancy	Planning Division	
97.	The final design of on and off-site amenities including, but not limited to benches, trashcans, bike racks, pet waste receptacles, lighting, playground equipment, art, furnishings, cabanas/shade structures, and outdoor play amenities, shall be approved by the City Engineer and Community Development Director	Prior to final Certificate of Occupancy	Planning and Public Works Divisions	
98.	All street lighting shall meet the equipment and illumination standards of the City to the satisfaction of the City Engineer.	Prior to first Certificate of Occupancy	Planning Division	
99.	Mailboxes shall be designed, installed and located by the developer to the satisfaction of the Community Development Director.	Prior to Certificate of Occupancy	Planning Division	
100.	The Applicant shall submit a set of development plans, including a lighting plan, to the Eastvale Police Department for review and approval for appropriate safety measures including, but not limited to, the following: PROPERTY GATES AND KNOX BOX ENTRY	Prior to first Certificate of Occupancy	Planning Division	

DRAFT

Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
a. The installation of the Knox Rapid Entry System if property gates are installed. This system permits law enforcement, fire, and first responders to obtain independent access to the property in the event of an emergency. The necessary order forms for the Knox Company may be obtained by contacting the Jurupa Valley Sheriff's Station Crime Prevention Programs Coordinator at (951) 955-9225. ADDRESS NUMBERING: b. Prominently displayed address numbering in size and contrasting in color from the building façade or on a fixed sign near the street/main entrances. The numbers need to be visible from the street and interior property sides for any approaching emergency vehicles. No obstructions should limit their visibility (i.e., landscaping). SECURITY AND LIGHTING PLAN c. Adequate crime prevention measures to assist with identifying any suspect(s) of any potential future vandalism or theft attempts. Due to the high possibility of theft/vandalism attempts during construction, additional security measures should be added during that time frame of proposed construction. All exterior access points should be properly illuminated to make clearly visible any person on or about the premises during the hours of darkness. d. Residential units shall be equipped with solid core doors and quality dead bolt locking devices at entry points.			

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
101.	Improved and decorative paving shall be provided at vehicular entry points, intersections, and areas of pedestrian connections to the satisfaction of the Community Development director.	Prior to first Certificate of Occupancy	Planning & Public Works Divisions	
102.	Interior parking areas shall include one (1) tree planted for every five (5) parking spaces within parking areas	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
103.	The Applicant shall include a mix of larger tree sizes with the minimum size being 24" box for 50% of total trees provided, 36" box for 30% of total, and 48" box for 20% of total. Applicant shall include an overall chart breaking down quantities of trees versus sizes for verification.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
104.	Plant materials shall be installed from container sizes per the following size matrix – 10% -15 gallon, 30%- 5 gallon, and 60% - 1 gallon.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
105.	All trees shall be double staked with vinyl type ties nailed to the lodge pole stakes in at least two vertical locations. Trees in high wind corridors or trees requiring special support measures shall require additional staking and or specialized staking material as needed.	Prior to final Certificate of Occupancy	Planning Division	
106.	Planting shall offer horizontal and vertical variation in form, texture, and scale and shall include multiple species to prevent the loss of a monoculture of a single species from species specific pest or other cause.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
107.	Landscape plans shall be designed to include concrete mow curbs or other approved separations for areas of landscape where separations or changes in maintenance responsibility exist and for separating turf or groundcover from shrub areas.. This shall be clearly defined on the plans for the purposes of understanding maintenance responsibility.	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
108.	Any trees that are in conflict shall be relocated to other areas of the site, subject to the review and approval of the Community Development Director	Prior to final Certificate of Occupancy	Planning & Public Works Divisions	
109.	All landscape and irrigation plans shall be consistent with the City of Eastvale Zoning Code, with Section 5.4 Landscaping General Provisions, the City of Eastvale Design Standards and Guidelines, and the City of Eastvale Chapter 14.24 Water Efficient Landscape Regulations, WUCOLS, and other current applicable codes and guides, in effect prior to May 11, 2022.	Prior to final Certificate of Occupancy	Planning Division	
110.	All required landscaping of Phase C shall be installed and verified prior to issuance of certificate of occupancy for the last residential unit of Phase C.	Prior to Certificate of Occupancy for last unit of Phase C	Planning Division	
111.	A minimum of ten percent (10%) of the parking area shall be landscaped. One tree shall be planted for every five (5) parking spaces within the parking area (tree diamonds may be used). Fifty percent of the trees shall be minimum size of fifteen (15) gallons and fifty percent of the trees shall be a minimum size of twenty-four (24) inch box, or as specified in the Master Plan	Prior to final Certificate of Occupancy	Planning Division	
112.	The applicant shall have the following items on permanent and prominent display in the construction office where applicable: a. A copy of the approved and recorded tract map; b. A copy of the approved Major Development Review plot plans; c. A copy of the approved landscape architecture plans; d. A copy of the approved residential parking management plan; e. A map showing the boundaries of those areas to be maintained by the Homeowners Association; f. Applicable Codes, Covenants, and Restrictions (CC&Rs).	Prior to first Certificate of Occupancy	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
113.	The applicant shall submit to the City Engineer and Community Development Director for review and approval the Covenants, Conditions, and Restrictions ("CC&Rs") and/or a Property Owners Association document and shall contain language station compliance with the Leal Master Plan and Eastvale Zoning Code as existing prior to May 11, 2022. This condition does not apply to city-owned or controlled parcels.	Prior to first Certificate of Occupancy	Planning Division	
114.	The CC&Rs shall address maintenance and operation of common areas and/or facilities including but not limited to, private parking areas, private utilities, and publicly maintained water quality basins. The CC&Rs shall also prohibit landscaping with H.O.A.-maintained areas from being modified, trimmed, or removed in any way by the homeowner, without express authorization by the H.O.A. This condition does not apply to city-owned or controlled parcels.	Prior to first Certificate of Occupancy	Planning Division	
115.	The project CC&Rs shall prohibit the use of dedicated covered resident parking for personal storage or any use other than for the parking of operable motor vehicles at all times to the satisfaction of the City Attorney and Community Development Director.	Prior to first Certificate of Occupancy	Planning Division	
116.	Parking restrictions resultant of minimum width streets, no overnight parking, and permit parking shall be identified in the project CC&Rs.	Prior to first Certificate of Occupancy	Planning Division	
117.	The applicant shall provide and future H.O.A shall enforce a parking management plan consistent with the Leal Master Plan Phase C Residential Parking Review and Parking Management Plan (PMP)- City of Eastvale, CA memorandum prepared by RK Engineering Group, Inc. dated August 13, 2026, for review and approval by the Community Development Director.	Prior to first Certificate of Occupancy	Planning Division

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
Ongoing				
118.	The quality and ongoing maintenance of decomposed granite shall be to the satisfaction of the City Engineer	Ongoing	Planning and Public Works Divisions	
119.	To reduce fugitive dust emissions, the contractor shall provide the City with sufficient proof of compliance with Rule 403 and other dust control measures including but not limited to: • Watering active sites three times daily. • Requiring the replacement of ground cover or the application of non-toxic soil stabilizers according to manufacturer specifications to unpaved roads and all inactive construction areas (previously graded areas inactive for 10 days or more, assuming no rain). • Requiring trucks entering or leaving the site hauling dirt, sand, or soil or other loose materials on public roads to be covered. • Suspending all excavating and grading operations when wind gusts (as instantaneous gust) exceed 25 miles per hour. • Posting contact information outside the property for the public to call if specific air quality issues arise; the individual charged with receipt of these calls shall respond to the caller within 24 hours and resolution of the air quality issue(s), if valid, or implementation of corrective action(s) will occur within 48 to 72 hours of the time that the issues first arose. • Sweeping of streets using SCAQMD Rule 1186 and 1186.1 certified street sweepers or roadway washing trucks (utilizing recycled water if it becomes available) at the end of the day if visible soil material is carried over to adjacent streets. • Posting and enforcement of traffic speed limits or 15 miles per hour or less on all unpaved roads.	Ongoing (during project construction)	Building and Public Works Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	• Installing wheel washers or gravel pads at construction entrances where vehicles enter and exit unpaved roads onto paved roads, or wash off trucks and any equipment leaving the site each trip to prevent track-out. Paving of all roadways, driveways, sidewalks, etc., shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless soil stabilizers are used.			
120.	All HOA maintained landscaping shall be perpetually maintained and be in a healthy and thriving manner consistent with the approved construction landscape plans. Any changes and modifications made to the approved landscape design and ground coverage shall be required to reviewed and approved by the Community Development Director.	Ongoing	Planning and Code Enforcement Divisions	
121.	All HOA amenities (such as but not limited to mailboxes, trashcans, landscape, lighting, signage, etc.) shall be continually maintained and operational in a manner consistent with the approved plans to the satisfaction of the Community Development Director.	Ongoing	Planning and Code Enforcement Divisions	
122.	Provide street sweeping services for onsite and offsite within project frontages as needed or as required by the City Engineer.	Ongoing	Public Works Department	
123.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	Ongoing	Public Works Department	
124.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Ongoing	Public Works Department	
125.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and	Ongoing	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.			
126.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as referenced in Section 12.08.260 of the Eastvale Municipal Code.	Ongoing	Public Works Department	
127.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	Ongoing	Public Works Department	
128.	Construction signing, lighting, and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 "Temporary Traffic Control" of	Ongoing	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	the latest California Manual on Uniform Traffic Control Devices ("CA MUTCD"), or subsequent editions in effect at the time of construction.			
129.	Street improvements for Scholar Way and 58th Street contiguous to Phase C and shall be included in one performance bond (Phase C Off-Site Performance Bond) prior to the first building permit in Phase C.	Ongoing	Public Works Divisions	
Jurupa Community Services District (JCSD)				
130.	This project will be subject to compliance with Jurupa Community Services District's (District) rules, regulations, conditions, requirements, and payment of applicable fees for the proposed project.	Prior to Building Permit	JCSD	
131.	The applicant is required to coordinate with Jurupa Community Services District during the entire development process for their project. The District provided a Board of Directors approved water and sewer availability letter dated 5/23/2023.	Prior to Building Permit	JCSD	
132.	The developer shall submit the final engineering plans for water, sewer, and recycled water facilities for JCSD's review and approval to serve the project areas. JCSD requires the water system to be looped. The Developer shall install master water meters and submeters for each unit. The project also requires the implementing of JCSD's new AMI meter technology and program. The District will not maintain water or sewer laterals or facilities within the project because the interior streets are proposed to be private streets.	Prior to Building Permit	JCSD	
133.	The proposed project will be required to participate in the final adopted recycled water program to provide a recycled water supply source and related infrastructure improvements for parks and landscaping areas. This process includes coordination and approval from the Division of Drinking Water in the State Water Resources Control Board.	Prior to Building Permit	JCSD	
134.	The proposed project will be required to participate in the final adopted recycled water program to provide a recycled water supply source and related	Prior to Building Permit	JCSD	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	infrastructure improvements for the landscaping areas in the public right-of-way. This process includes coordination and approval from the Division of Drinking Water (DDW) in the State Water Resources Control Board (SWRCB). Typically, DDW requires the following plans as a part of their review and approval process: • Recycled Water Use Exhibit/Colored Map • Piping Plan showing the horizontal and vertical separation between potable and recycled water pipelines • Landscaping and irrigation Plans. • Civil Plans			
135.	The applicant is required to work with JCSD Finance Department to finalize all financial assurances, such as CFD Amendment, Letter of Credit and Surety Bond, before the District will sign the engineering plans for the Phase C Planning Areas.	Prior to Building Permit	JCSD	
Riverside County Fire Department				
136.	Fire Protection Water Supplies/Fire Flow – Minimum fire flow for the construction of all buildings is required per CFC Appendix B. A reduction of up to 50% in the required fire flow is permitted for buildings equipped with automatic fire sprinklers in accordance with the City Municipal Code. Prior to building permit issuance, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. On-site water supply must be available and operational before any combustible materials are placed on the construction site. Specific design features may increase or decrease the required fire flow. a. Will Serve Letters from the responsible water purveyor are required prior to map recordation.	Prior to Building Permit Issuance	Riverside County Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
137.	Fire Protection Water Supplies/Hydrants – The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with CFC Appendix C and NFPA 24. Fire hydrants shall be located no more than 400 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road. In areas where new water mains are extended along streets and hydrants are not needed for protection of structures, standard fire hydrants shall be provided at spacing not to exceed 1,000 feet along streets for transportation hazards. Fire hydrants shall be at least 40 feet from the building they are serving. A fire hydrant shall be located within 20 to 100 feet of the fire department connection for buildings protected with a fire sprinkler system. Hydrants must have at least one 4" and one 2 ½" connection (Standard Hydrants).	Prior to Building Permit Issuance	Riverside County Fire Department	
138.	Tract Water Plans – Prior to building permit issuance, the applicant/developer shall furnish the water system fire hydrant plans to Fire Department for review and approval. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval.	Prior to Building Permit Issuance	Riverside County Fire Department	
139.	Fire apparatus access roads – Fire apparatus access roads shall comply with the Development Agreement recorded July 27, 2022. Fire apparatus access roads shall be provided within 150 feet of all exterior portions of buildings. Fire apparatus access roads shall have an unobstructed vertical clearance not less than 13 feet and 6 inches. Fire apparatus access roads must be designed to withstand the weight of 80,000 thousand pounds. Apparatus weight is distributed as 55,000 pounds on tandem rear axles and 25,000 pounds on the front axle. Fire apparatus access road grade must not exceed 16%, and the	Prior to Building Permit Issuance	Riverside County Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	cross slope must not exceed 2.5%. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6% grade change for 25 feet of approach/departure. Fire apparatus access roads shall have a turning radius capable of accommodating fire apparatus. Road base without an appropriate topping or binding material does not satisfy the all-weather requirement. A. Fire Lane marking: Identification and marking of fire lanes, including curb details and signage, shall comply with all Riverside County Fire Department Standards.			
140.	Dead-end fire apparatus access roads – Dead-end fire apparatus access roads more than 150 feet in length shall be provided with an approved turnaround.	Prior to Building Permit Issuance	Riverside County Fire Department	
141.	Inside and Outside Turning Radii – The access road shall comply with the Development Agreement recorded July 27, 2022, and shall have a minimum inside turning radius of 24 feet and a minimum outside turning radius of 45 feet. Because fire apparatus cannot negotiate tight "S" curves, a minimum 60-foot straight leg shall be provided between compound turns, or the turning radii and/or road width shall be increased accordingly.	Prior to Building Permit Issuance	Riverside County Fire Department	
142.	Traffic Calming Devices Prohibited – Traffic Calming Devices that delay emergency response are prohibited. Requests to install traffic calming road designs or devices on fire apparatus access roads must be submitted to the Fire Department for review and approval prior to installation.	Prior to Building Permit Issuance	Riverside County Fire Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
143.	Fire and Life Safety Requirements – Final fire and life safety conditions will be addressed when the Fire Department reviews any subsequent submittals. These conditions will be based on California Fire Code (CFC), California Building Code (CBC), and related codes/standards adopted and amended at the time of construction plan submittal.	Prior to Building Permit Issuance	Riverside County Fire Department	
144.	Landscape Plan Review – Prior to building permit issuance, the applicant or developer must submit landscape plans to the Fire Department for review and approval. The plans must demonstrate that all trees, shrubs, palms, and other vegetation at mature size will not obstruct fire department laddering access, aerial apparatus operations, roof access, or fire apparatus reach to any portion of the buildings.	Prior to Building Permit Issuance	Riverside County Fire Department	
145.	Phased Construction – If construction is to be phased, a Construction Phasing Plan shall be submitted to the Fire Department for review and approval prior to building permit issuance for each phase of construction. Each construction shall maintain fire access.	Prior to Building Permit Issuance	Riverside County Fire Department	
146.	Residential Fire Sprinklers – Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Fire Department for review and be approved prior to installation.	Prior to Building Permit Issuance	Riverside County Fire Department	
147.	Gate Access – All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. These gates shall be provided with access to gate equipment or another method to open the gate if there is a power failure. (Manual gates shall not be locked unless a Knox padlock or Knox Box containing the key to the lock is installed in an approved location	Prior to Building Permit Issuance	Riverside County Fire Department	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	on the approach side of the gate). A pedestrian gate, if used to provide access, shall be a minimum 3 feet wide and provided with a Knox Box/Padlock if locked. Upon installation of the system, compliance testing shall be completed by the Riverside County Fire Department.			
148.	Building Address Numbers – The location of address numbers shall be indicated on the building plans. Street numbers shall be displayed in a prominent location on the street or fire apparatus access side of buildings. Numbers and letters shall be a minimum of 12" in height with a minimum stroke of .05 inch. Where access is by means of a private road and the building cannot be viewed from a public way, a monument, pole, or other sign shall be used to identify the structure. Address must be legible, of a contrasting color, and illuminated either internally or externally to be visible from the street at all hours.	Prior to Building Permit Issuance	Riverside County Fire Department	
General **Riverside County Flood Control District**				
149.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Eastvale Master Drainage Plan, Lines D-3 and Eastvale MDP-Eastwalk Storm Drain (See PA7C, PA12B, and PA12C proposed connections). If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.	Prior to Encroachment Permit	Riverside County Flood Control District	
150.	This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation, or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt.	Prior to Encroachment Permit	Riverside County Flood Control District	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans, and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation, or other final approval of the project and a Letter of Map Revision (LOMR) prior to occupancy. The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply.			
Planning Area 7C				
151.	The applicant shall modify the garage doors depicted on the Modern and Contemporary product types to a garage door style satisfactory to the Community Development Director.	Prior to Building Permit	Planning Division	
152.	To the satisfaction of the Community Development Director, the applicant shall install cable rail fencing with boulders at the terminus of 'Y' Drive and Planning Area 7B to create additional screening and a barrier.	Prior to Building Permit	Planning Division	
Planning Area 12A

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

DRAFT

CONDITIONS OF APPROVAL
Planning Application Number and Description: Project No. PLN25-20086 – Tentative Tract Map (TTM) No. 38596 to subdivide 44.46 acres of undeveloped property into 73 buildable lots and 13 lettered lots for condominium, multi-family residential, open space, and public right-of-way purposes, located at the northwest corner of Limonite Avenue and Hamner Avenue.
Assessor's Parcel Number: 164-030-052
Planning Commission Date: September 16, 2026
Planning Commission Approval:

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
General Conditions/Requirements				
1.	Acceptance of the Conditions of Approval is subject to, and does not waive, applicant's ability to protest or challenge any fees, dedications, reservations or other exactions imposed by the City on the project in the manner provided for in the Government Code Section 66020, as noted below or under State Law. The applicant shall review and sign below verifying the "Acceptance of the Conditions of Approval" and return the signed page to the Eastvale Planning Division. The signed statement of acceptance is required and must be returned to the Planning Division prior to submittal for Building Permits. Applicant Signature Date	Must be completed to finalize approval	Planning Division	
2.	The applicant shall indemnify, protect, defend, and hold harmless the City as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
3.	Applicant understands and agrees that failure to comply with all conditions of approval may result in the City Council/Planning Commission taking action resulting in modification of conditions of approval and/or suspension or revocation of the **Tentative Tract Map.**	Ongoing	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
4.	PLN25-20086 is granted for the time period as provided for in the Development Agreement by and between the applicant and the City for the project (DA 003).	Ongoing	Planning Division	
5.	All applicable Major Development Review, Tentative Tract Map 38290, and Development Agreement conditions of approval for PLN21-20039 shall be incorporated herein by reference.	Ongoing	Planning Division	
6.	Any approval shall not be final until and unless the applicant's deposit account with Public Works has a balance of at least $10,000 to cover staff time to follow-up, monitoring, and other post-approval work by staff. The City reserves the right to request additional deposits to cover post-approval staff work and to half work if the deposit account is exhausted.	On-going	Public Works Department	
Fees				
7.	Pursuant to Sections 3.2.2 and 4.1.6.1 of Development Agreement No. 003, applicant shall pay the development impact fees in effect at the time building permits are issued, excluding the Parkland Improvement Impact fee and the Community and Recreation Center Impact Fee. For informational purposes, the current impact fee amounts applicable to the project and listed below can be found at https://pol.laserfiche.com/Portal/DocView.aspx?id=209182&repo=r-78788824. City Hall Impact Fee Police Station Impact Fee Fire Department Facilities Impact Fee Library Impact Fee The park, open space and recreation improvement requirements applicable to the project are set forth in Section 4.1.6.1 and Exhibit E of Development	Prior to Building Permit Issuance unless deferred pursuant to Eastvale Municipal Code Section 110.28.050B	Building Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	Agreement No. 003 and applicant shall provide parkland and parkland improvements, or fees in lieu thereof, in compliance with the terms of Development Agreement No. 003.			
8.	Excluding the regional pass-through fees in conditions of approval 11 and 12, the applicant may protest any fees, dedications, reservations, or other exactions imposed by the City on the project in the manner provided for in Government Code Section 66020. Any protest of the impact fees in condition of approval 7 above, or any other fees, dedications, reservations, or other exactions imposed by the City on the project through these conditions of approval other than the regional pass-through fees in conditions of approval 11 and 12, must be filed within 90-days of the date of the conditional approval of Tentative Map 38596. The applicant is not required to file an appeal of a condition of approval imposing any fees, dedications, reservations, or other exactions under Eastvale Municipal Code Section 130.12.160 in addition to a protest under this condition of approval. The acknowledges that the Applicant is relying upon this representation in not filing any appeal to the City Council to contest these fees.	90 days from Tentative Tract Map 38596 approval	Building Division	
9.	In accordance with Government Code Section 66006(e), the Applicant is hereby notified of the right to file with the City Clerk: (a) a request for an audit of the City's development impact fees in accordance with Government Code Section 66023; and (b) a written request for mailed notices of the City's public meetings to review annual reports of development impact fees under Government Code Section 66006(b)(1).		Building Division	
10.	RBBD fees in effect at the time the applicant submitted its SB 330 preliminary application shall be paid prior to Certificate of Occupancy, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d).	Prior to final Certificate of Occupancy	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
11.	TUMF fees in effect at the time the applicant submitted its SB 330 preliminary application shall be paid prior to Certificate of Occupancy, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d). The applicant may appeal TUMF fees in accordance with the provisions for an appeal set forth in the TUMF Administrative Plan and any other applicable WRCOG procedures and requirements.	Prior to final Certificate of Occupancy	Public Works Department	
12.	MSHCP fees in effect at the time the applicant submitted its SB 330 preliminary application, as such fees may be adjusted pursuant to Government Code Section 65589.5(o)(2)(A), shall be paid prior to Building permit issuance, unless applicant revises the project in a manner that results in a loss of SB 330 preliminary application rights as provided in Government Code Section 65941.1(d). The applicant may appeal MSHCP fees in accordance with applicable WRC-RCA procedures and requirements.	Prior to Building Permit Issuance	Planning Division and Building Division	
Prior to Map Recordation				
13.	The applicant shall enter into a Subdivision Improvement Agreement with the city, and shall guarantee by posting security(ies) to include all public improvements that the developer is conditioned to construct as part of this approval.	Prior to map recordation	Public Works Department	
14.	Dedicate right-of-way as shown on TTM 38596 along the entire frontage as may be required to provide a property line at ultimate right-of-way in accordance with the City General Plan, any applicable Specific Plan and/or as required by the City Engineer.	Prior to map recordation	Public Works Department	
15.	Existing transportation and/or utility easements that conflict with proposed development shall be quitclaimed/abandoned on the Final Map.	Prior to map recordation	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
16.	A Tract Map shall be prepared by a California registered Land Surveyor or qualified Civil Engineer and submitted to the Engineering Division for review and approval. A Title Report prepared for subdivision guarantee for the subject property, the traverse closures for the existing parcel and all lots created therefrom, and copies of record documents shall be submitted with the Final Map to the Engineering Division as part of the review of the Map. The Final Map shall be approved by the City Council prior to issuance of building permits.	Prior to map recordation	Public Works Department	
17.	Lot F-H, J-K, M shall be dedicated to the City	Prior to map recordation	Public Works Department	
18.	Monument bond shall be posted with the City. The Developer shall provide a cost estimate to set monuments prepared by a California licensed Land Surveyor or registered Civil Engineer to the Public Works Division for review and approval by the City Engineer.	Prior to map recordation	Public Works Department	
19.	All public road dedications as part of this Conditions of Approval shall utilize the following design criteria to the satisfaction of the City Engineer: • 11 feet for left/right turn pockets • 12 feet for general purpose travel lanes • 14 feet for general purpose travel lanes adjacent to the right curb • 14 feet for right turn pocket • Scholar Way shall be designed to match the existing improvements constructed with Phase A to the south.	Prior to map recordation	Public Works Department	
20.	If not already constructed by a previous phase, backbone streets shall consist of 76' of right-of-way developed as follows: 2' of landscaping, an 11' concrete dual purpose trail (evenly delineated by striping), 7' of landscaping, 36' for two (2) general purpose travel lanes, 7' of landscaping, an 8' concrete sidewalk, and 5' of landscaping.	Prior to map recordation	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
21.	Provide plans (landscape, grading, etc.) showing a multipurpose trail/Class I trail/linear park fronting the property along 58th Street and Scholar Way.	Prior to map recordation	Public Works Department	
Prior to the Issuance of Grading Permit				
22.	A site-specific air toxics pollutant analysis shall be conducted in accordance with the SCAQMD (2008) Final Localized Significance Threshold Methodology for operational activities. If SCAQMD screening thresholds would be exceeded, air toxic reduction measures shall be identified in order to reduce potential impacts to a level that is less than significant. If it is the case that emissions remain in excess of SCAQMD localized significance thresholds despite the imposition of air toxic reduction measures, project-specific operations-related dispersion modeling acceptable to the SCAQMD shall be used to identify potential toxic air contaminant impacts, including diesel particulate matter generated by heavy-duty haul trucks. If SCAQMD risk thresholds would be exceeded, additional mitigation measures shall be identified in the air toxics analysis to address potential impacts and shall be based on site-specific information such as the distance to the nearest sensitive receptors, project site plan details, and merchandise delivery schedule. The City shall ensure that operations include all identified measures and that the measures reduce the health risk below SCAQMD risk thresholds. Operations-generated air toxic pollutant mitigation measures may include but not be limited to: Redesigning the project site plan to locate proposed loading dock facilities as far from sensitive receptors as possible. Posting signage stating the State-mandated prohibition on all project trucks idling in excess of 5 minutes under the Heavy-Duty Vehicle City of Eastvale Page 21 Leal Master Plan EIR Addendum No. 1 Idling Emission Reduction Program. Restricting the number of daily heavy-duty haul truck deliveries. *(Mitigation Measure 3.3.5b Air Quality)*	Prior to Grading Permit	Planning, Building and Safety, or Public Works Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
23.	The following Addendum No.1 to the Leal Master Plan EIR mitigation measures shall be implemented and specified on all project construction plans: Clearing and construction activities shall be conducted outside of 6:00 p.m. and 6:00 a.m. during the months of June through September, and outside of 6:00 p.m. and 7:00 a.m. during the months of October through May (Municipal Code Chapter 8.52, Noise Regulation). All construction equipment shall be kept properly tuned and use noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. Construction equipment staging areas shall be centrally located on the project site or located at the farthest distance possible from nearby residential land uses. All motorized construction equipment and vehicles shall be turned off when not in use. *(Mitigation Measure 3.6.4 Noise)*	Prior to Grading Permit	Planning Division	
24.	MM 3.7.1 All construction and clearing activities shall be conducted outside of the avian nesting season (January 15– August 31), when feasible. If clearing and/or construction activities occur during the nesting season, preconstruction surveys for nesting raptors, special-status resident birds, and other migratory birds protected by the Migratory Bird Treaty Act shall be conducted by a qualified biologist, up to 3 days before initiation of construction activities. The qualified biologist shall survey the construction zone and a 250-foot radius surrounding the construction zone to determine whether the activities taking place have the potential to disturb or otherwise	Prior to Grading Permit	Planning Division	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	harm nesting birds. If an active nest is located within 100 feet (250 feet for raptors) of construction activities, the project applicant shall establish an exclusion zone (no ingress of personnel or equipment at a minimum radius of 100 feet or 250 feet, as appropriate, around the nest). Alternative exclusion zones may be established through consultation with the CDFW and the USFWS, as necessary. The City shall be notified if altered exclusions zones widths are authorized by these agencies prior to the initiation of work. The exclusion zones shall remain in force until all young have fledged. *(Mitigation Measures 3.7.1 Biological Resources)*			
25.	If cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history shall be retained to determine the significance of the discovery. The City shall consider mitigation recommendations presented by a professional archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in archaeology and/or history for any unanticipated discoveries. The City and the project applicant of the site where the discovery is made shall consult and agree on implementation of a measure or measures that the City deems feasible. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of cultural resources. *(Mitigation Measure 3.8.2 Cultural Resources)*	Prior to Grading Permit	Planning Division	
26.	If human remains are discovered during any ground-disturbing activities in the project area, all work shall be halted immediately within 50 feet of the discovery, the City Planning Department shall be notified, and the Riverside	Prior to Grading Permit	Planning Division	

DRAFT

	County Coroner must be notified per California Public Resources Code Section 7050.5 and California Health and Safety Code Section 5097.98. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and I shall be followed. *(Mitigation Measure 3.8.3 Cultural Resources)*			
27.	Prior to issuance of a grading permit, a certified professional paleontologist will be retained by the developer to provide professional paleontological services, which will include survey, education of construction workers, onsite construction monitoring, appropriate recovery, and reporting. A paleontological monitor shall be present during ground disturbing activities in the eastern half of the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. The paleontological monitor shall be present full-time during ground disturbance in the eastern half of the Project, including but not limited to grading, trenching, utilities, and offsite easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area. In consultation with the qualified paleontologist the monitor shall quickly	Prior to Grading Permit	Planning Division	

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find. For the remaining portions of the Project site, if any paleontological resources (fossils) are discovered during grading or construction activities in the project area, work shall be halted immediately within 50 feet of the discovery, and the City Planning Department shall be immediately notified. At that time, the City will coordinate any necessary investigation of the discovery with a qualified paleontologist. The City shall consider the mitigation recommendations of the qualified paleontologist for any unanticipated discoveries of paleontological resources. The City and the project applicant shall consult and agree on implementation of a measure or measures that the City deems feasible and appropriate. Such measures may include avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. The project applicant shall be required to implement any mitigation necessary for the protection of paleontological resources. *(Mitigation Measure 3.8.4 Cultural Resources)*			
28.	The project applicant shall conduct a Phase II ESA and shall follow its recommendations to remediate any potentially contaminated soil or groundwater. On-site contaminants must be addressed to the satisfaction of	Prior to Grading Permit	Building and Planning Divisions

33.	Submit California registered civil engineer prepared sewer improvement plans to the JCSD/Engineering Division. The plans shall be JCSD approved prior to issuance of any building permits.	Prior to Building Permit	Public Works Department	
34.	The developer is advised that domestic water service is provided by JCSD. The developer shall be responsible for coordinating with JCSD and complying with all requirements for establishing domestic water service to the property.	Prior to Building Permit	Public Works Department	
35.	All street improvements including curb, gutter, and street improvements to meet applicable City standards.	Prior to Building Permit	Public Works Department	
36.	Submit photometric plan of street lighting. All lights shall be Edison LS-3 tariff and utilize General Electric Evolve LED luminaires per City Specifications. The Developer shall be responsible for applying with Southern California Edison ("SCE") for all appropriate service points and electrical meters early in the process to avoid delays. The Developer must pay for the electrical service of new meter pedestals installed until such time the improvements have been accepted and the underlying property is annexed into Community Facilities District ("CFD") or Landscaping Maintenance District ("LMD").	Prior to Building Permit	Public Works Department	
37.	The Developer shall submit traffic striping and signage plans for the off-site improvements, prepared by a California registered Civil Engineer, for review and approval by the City Engineer. All off-site Phase C base-pavement and temp striping shall be completed to the satisfaction of the City Engineer.	Prior to first Building permit	Public Works Department	
38.	Developer shall post performance and material bonds for 58th, Scholar, and any offsite streets for its offsite street improvements.	Prior to first Building permit	Public Works Department	
39.	The developer shall provide Will-Serve Letters from all utility agencies.	Prior to Building Permit	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
40.	The developer shall prepare an address blocking exhibit with the proposed addressing and street names for review and approval by the Planning Division. This plan, including updates to the plan, shall include addressing for buildings (primary address and units) and utilities such as but not limited to electrical/water/single/dual irrigation meter pedestal(s) or temporary power poles.	Prior to Building Permit	Planning and Building Division	
41.	All future development of TTM 38596 shall be subject to the provisions of Section 120.02.010 Of the Eastvale Municipal Code with the review and approval of a Major Development Review application by the Planning Commission.	Prior to Building Permit	Planning Divisions	
Prior to Certificate of Occupancy				
42.	All parkway landscaping shall be guaranteed for a period of one (1) year from the date of the City Engineer acceptance. Any landscaping that fails during the one (1) year landscape maintenance period shall be replaced with similar plant material to the satisfaction of the City Engineer.	Prior to final Certificate of Occupancy	Public Works Department	
43.	The development shall be annexed into all applicable CFD and/or LMD for traffic signals, street lights, full capture systems for all storm drains and landscape maintenance of raised landscape median and public parkways, to the satisfaction of the City Engineer or otherwise from a district where one is not currently in place.	Prior to final Certificate of Occupancy	Public Works Department	
44.	Water and electric meter for all CFD/LMD areas shall be designed and located independently from non-CFD/non-LMD areas.	Prior to first Certificate of Occupancy	Public Works Department	
45.	Upon City Engineer approval of any improvement plan, the improvement plan shall be provided to the City in digital format, consisting of DWG (AutoCAD drawing file), DXF (AutoCAD ASCII drawing exchange file), and PDF (Adobe Acrobat) formats. Variation of type and format of digital	Prior to first Certificate of Occupancy	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	data to be submitted to the City may be authorized, upon prior City Engineer approval.			
46.	Provide certification from JCSD to demonstrate that all water and/or wastewater service accounts have been documented.	Prior to first Certificate of Occupancy	Public Works Department	
47.	All damaged, destroyed, or modified pavement legends, traffic control devices, signing, striping, and street lights, associated with the proposed development shall be replaced.	Prior to Final Certificate of Occupancy	Public Works Department	
48.	Construct a curb ramp meeting current California State Accessibility standards along both sides of drive approaches and intersections. The developer shall ensure that an appropriate path of travel, meeting ADA guidelines, is provided and shall adjust the location of the access ramps, if necessary to meet ADA guidelines, subject to the approval of the City Engineer. If necessary, additional pedestrian and sidewalk easements shall be provided on-site to construct a path of travel meeting ADA guidelines.	Prior to first Certificate of Occupancy	Public Works Department	
49.	Update the existing street plans as required by the City Engineer.	Prior to first Certificate of Occupancy	Public Works Department	
50.	Reconstruct Scholar Way to the centerline of the Street. Edge cuts shall line up with lane lines. No additional crown lines shall be added to any public street. All public streets shall have consistent cross slope.	Prior to first Certificate of Occupancy	Public Works Department	
51.	Reconstruct 58th Street to the centerline of the Street. Edge cuts shall line up with lane lines. No additional crown lines shall be added to any public street. All public streets shall have consistent cross slope.	Prior to first Certificate of Occupancy	Public Works Department	
52.	Construct a multipurpose trail approved by the Public Works Department and Planning Division along the project perimeter on 58th Street and Scholar Way.	Prior to first Certificate of Occupancy	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
53.	Construct a 4' wide decomposed granite trail approved by the Public Works and Planning Division along the project perimeter of 58th street.	Prior to first Certificate of Occupancy	Public Works and Planning Division	
54.	Install decorative streetlights with sleeves along 58th Street, and Scholar Way or as approved by the Public Works Division and Planning Division.	Prior to first Certificate of Occupancy	Public Works Department	
55.	As applicable to Phase C, install Class I bicycle lanes along Scholar Way and 58th Street.	Prior to first certificate of occupancy		
56.	Install License Plate Reader ("LPR") cameras to tie into the existing Citywide system at all signalized intersections servicing the property along the project frontage on Scholar Way and 58th Street.	Prior to final Certificate of Occupancy	Public Works Department	
57.	As applicable to Phase C, relocate all necessary traffic signals and replace all necessary components to accommodate new street right-of-way along Scholar Way and 58th Street as shown on the Leal Master Plan.	Prior to first Certificate of Occupancy	Public Works Department	
58.	Offsite street improvements along Scholar Way and 58th Street shall be completed prior to the first certificate of occupancy of Phase C.	Prior to first Certificate of Occupancy	Public Works Department	
59.	Prior to the issuance of the last certificate of occupancy in Phase B or the first certificate of occupancy in Phase C, whichever occurs first, all off-site street improvements shall be completed on Scholar Way and 58th Street.	Prior to last certificate of Occupancy in Phase B or the first Certificate of Occupancy in Phase C, whichever occurs first	Public Works Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
60.	Concurrent with each street improvement, install fiber optics conduit per City standard along property frontage and pull fiber through conduit along property frontage to support current and future synchronization, Intelligent Transportation Systems ("ITS"), and public safety upgrades to the satisfaction of the City Engineer. Connect to the existing pull boxes on Scholar and 58th from Phase A and Phase B.	Prior to first Certificate of Occupancy	Public Works Department	
Ongoing				
61.	Remove all graffiti within 24 hours pre-construction, during construction, and after a Certificate of Occupancy is issued.	Ongoing	Public Works Department	
62.	A City of Eastvale Encroachment Permit is required for any improvements within the public right-of-way.	Ongoing	Public Works Department	
63.	Provide street sweeping services for onsite and offsite within project frontages as needed or required by the City Engineer.	Ongoing	Public Works Department	
64.	All street cuts for utilities shall be repaired in accordance with City Standard or as recommended; and any interim trench repairs shall consist of compacted backfill to the bottom of the pavement structural section followed by placement of standard base course material in accord by the City Engineer and with the Standard Specifications for Public Work Construction ("Greenbook"). The base course material shall be placed the full height of the structural section to be flush with the existing pavement surface and provide a smooth pavement surface until permanent cap paving occurs using an acceptable surface course material.	Ongoing	Public Works Department	
65.	In accordance with City's Moratorium policy to preserve newly paved streets, any and all street and/or trench cuts in newly paved streets will be prohibited or be subject to moratorium street repair standards as referenced in Section 12.08.260 of the Eastvale Municipal Code.	Ongoing	Public Works Department	

DRAFT

Conditions of Approval		Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
66.	Any and all utility trenches or other excavations within existing asphalt concrete pavement of off-site streets resulting from the proposed development shall be backfilled and repaired in accordance with City of Eastvale Standard Drawings. The developer shall be responsible for removing, grinding, paving and/or overlaying existing asphalt concrete pavement of off-site streets including pavement repairs in addition to pavement repairs made by utility companies for utilities installed for the benefit of the proposed development (i.e. Jurupa Community Services District, Southern California Edison, Southern California Gas Company, Time Warner, Verizon, etc.). Multiple excavations, trenches, and other street cuts within existing asphalt concrete pavement of off-site streets resulting from the proposed development may require complete grinding and asphalt concrete overlay of the affected off-site streets, at the discretion of the City Engineer. The pavement condition of the existing off-site streets shall be returned to a condition equal to or better than what existed prior to construction of the proposed development.	Ongoing	Public Works Department	
67.	Construction signing, lighting, and barricading shall be provided during all phases of construction in accordance with City Standards and the direction of the City Engineer. As a minimum, all construction signing, lighting and barricading shall be in accordance with Part 6 “Temporary Traffic Control” of the latest California Manual on Uniform Traffic Control Devices ("CA MUTCD"), or subsequent editions in effect at the time of construction.	Ongoing	Public Works Department	
68.	Street improvements for Scholar Way and 58th Street contiguous to Phase C and shall be included in one performance bond (Phase C Off-Site Performance Bond) prior to the first building permit in Phase C.	Ongoing	Public Works Divisions

Jurupa Community Services District (JCSD)				
69.	This project will be subject to compliance with Jurupa Community Services District's (District) rules, regulations, conditions, requirements, and payment of applicable fees for the proposed project.	Prior to Building Permit	JCSD	
70.	The applicant is required to coordinate with Jurupa Community Services District during the entire development process for their project. The District provided a Board of Directors approved water and sewer availability letter dated 5/23/2023.	Prior to Building Permit	JCSD	
71.	The developer shall submit the final engineering plans for water, sewer, and recycled water facilities for JCSD's review and approval to serve the project areas. JCSD requires the water system to be looped. The Developer shall install master water meters and submeters for each individual unit. The project also requires implementing JCSD's new AMI meter technology and program. The District will not maintain water or sewer laterals or facilities within the project because the interior streets are proposed to be private streets.	Prior to Building Permit	JCSD	
72.	The proposed project will be required to participate in the final adopted program to provide a recycled water supply source and related infrastructure improvements for parks and landscaping areas. This process includes coordination and approval from the Division of Drinking Water in the State Water Resources Control Board.	Prior to Building Permit	JCSD	
73.	The applicant is required to work with JCSD Finance Department to finalize all financial assurances, such as CFD Amendment, Letter of Credit and Surety Bond, before the District will sign the engineering plans for the Phase C Planning Areas.	Prior to Building Permit	JCSD

Riverside County Fire Department				
74.	Fire Protection Water Supplies/Fire Flow – Minimum fire flow for the construction of all buildings is required per CFC Appendix B. A reduction of up to 50% in the required fire flow is permitted for buildings equipped with automatic fire sprinklers in accordance with the City Municipal Code. Prior to building permit issuance, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. On-site water supply must be available and operational before any combustible materials are placed on the construction site. Specific design features may increase or decrease the required fire flow. a. Will Serve Letters from the responsible water purveyor are required prior to map recordation.	Prior to Building Permit Issuance	Riverside County Fire Department	
75.	Fire Protection Water Supplies/Hydrants – The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with CFC Appendix C and NFPA 24. Fire hydrants shall be located no more than 400 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road. In areas where new water mains are extended along streets and hydrants are not needed for protection of structures, standard fire hydrants shall be provided at spacing not to exceed 1,000 feet along streets for transportation hazards. Fire hydrants shall be at least 40 feet from the building they are serving. A fire hydrant shall be located within 20 to 100 feet of the fire department connection for buildings protected with a fire sprinkler system. Hydrants must have at least one 4" and one 2 ½" connection (Standard Hydrants).	Prior to Building Permit Issuance	Riverside County Fire Department	
76.	Tract Water Plans – Prior to building permit issuance, the applicant/developer shall furnish the water system fire hydrant plans to Fire Department for review and approval. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and	Prior to Building Permit Issuance	Riverside County Fire Department

	minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval.			
77.	Fire apparatus access roads – Fire apparatus access roads shall comply with the Development Agreement recorded July 27, 2022. Fire apparatus access roads shall be provided within 150 feet of all exterior portions of buildings. Fire apparatus access roads shall have an unobstructed vertical clearance not less than 13 feet and 6 inches. Fire apparatus access roads must be designed to withstand the weight of 80,000 thousand pounds. Apparatus weight is distributed as 55,000 pounds on tandem rear axles and 25,000 pounds on the front axle. Fire apparatus access road grade must not exceed 16%, and the cross slope must not exceed 2.5%. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6% grade change for 25 feet of approach/departure. Fire apparatus access roads shall have a turning radius capable of accommodating fire apparatus. Road base without an appropriate topping or binding material does not satisfy the all-weather requirement. A. Fire Lane marking: Identification and marking of fire lanes, including curb details and signage, shall comply with all Riverside County Fire Department Standards.	Prior to Building Permit Issuance	Riverside County Fire Department	
78.	Dead-end fire apparatus access roads – Dead-end fire apparatus access roads more than 150 feet in length shall be provided with an approved turnaround.	Prior to Building Permit Issuance	Riverside County Fire Department	
79.	Inside and Outside Turning Radii – The access road shall comply with the Development Agreement recorded July 27, 2022, and shall have a minimum inside turning radius of 24 feet and a minimum outside turning radius of 45 feet. Because fire apparatus cannot negotiate tight “S” curves, a minimum	Prior to Building Permit Issuance	Riverside County Fire Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	60-foot straight leg shall be provided between compound turns, or the turning radii and/or road width shall be increased accordingly.			
80.	Traffic Calming Devices Prohibited – Traffic Calming Devices that delay emergency response are prohibited. Requests to install traffic calming road designs or devices on fire apparatus access roads must be submitted to the Fire Department for review and approval prior to installation.	Prior to Building Permit Issuance	Riverside County Fire Department	
81.	Fire and Life Safety Requirements – Final fire and life safety conditions will be addressed when the Fire Department reviews any subsequent submittals. These conditions will be based on California Fire Code (CFC), California Building Code (CBC), and related codes/standards adopted and amended at the time of construction plan submittal.	Prior to Building Permit Issuance	Riverside County Fire Department	
82.	Landscape Plan Review – Prior to building permit issuance, the applicant or developer must submit landscape plans to the Fire Department for review and approval. The plans must demonstrate that all trees, shrubs, palms, and other vegetation at mature size will not obstruct fire department laddering access, aerial apparatus operations, roof access, or fire apparatus reach to any portion of the buildings.	Prior to Building Permit Issuance	Riverside County Fire Department	
83.	Phased Construction – If construction is to be phased, a Construction Phasing Plan shall be submitted to the Fire Department for review and approval prior to building permit issuance for each phase of construction. Each construction shall maintain fire access.	Prior to Building Permit Issuance	Riverside County Fire Department	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
84.	Residential Fire Sprinklers – Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Fire Department for review and be approved prior to installation.	Prior to Building Permit Issuance	Riverside County Fire Department	
85.	Gate Access – All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. These gates shall be provided with access to gate equipment or another method to open the gate if there is a power failure. (Manual gates shall not be locked unless a Knox padlock or Knox Box containing the key to the lock is installed in an approved location on the approach side of the gate). A pedestrian gate, if used to provide access, shall be a minimum 3 feet wide and provided with a Knox Box/Padlock if locked. Upon installation of the system, compliance testing shall be completed by the Riverside County Fire Department.	Prior to Building Permit Issuance	Riverside County Fire Department	
86.	Building Address Numbers – The location of address numbers shall be indicated on the building plans. Street numbers shall be displayed in a prominent location on the street or fire apparatus access side of buildings. Numbers and letters shall be a minimum of 12" in height with a minimum stroke of .05 inch. Where access is by means of a private road and the building cannot be viewed from a public way, a monument, pole, or other sign shall be used to identify the structure. Address must be legible, of a contrasting color, and illuminated either internally or externally to be visible from the street at all hours.	Prior to Building Permit Issuance	Riverside County Fire Department	
Riverside County Flood Control District				
87.	An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, Eastvale Master Drainage Plan, Lines D-3 and Eastvale MDP-Eastwalk Storm Drain	Prior to Encroachment Permit	Riverside County Flood	

DRAFT

	Conditions of Approval	Timing/ Implementation	Enforcement/ Monitoring	Verification (Date and Signature)
	(See PA7C, PA12B, and PA12C proposed connections). If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.		Control District	
88.	This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation, or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt. If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans, and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation, or other final approval of the project and a Letter of Map Revision (LOMR) prior to occupancy. The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply.	Prior to Encroachment Permit	Riverside County Flood Control District	

DRAFT

General Compliance Items/Requirements and Information

The following items are noted for the applicant's information. These items are required by the City, other local agencies, or state and federal agencies, and are not conditions of approval of the project.

The applicant shall obtain City approval for any modifications or revisions to the approval of this project. Deviations not identified on the plans may not be approved by the City, potentially resulting in the need for the project to be redesigned. Amended entitlement approvals may be necessary as a result.

Should this project lie within any assessment/benefit district, the project proponent shall, prior to acceptance of improvements, make application for and pay for their reapportionment of the assessments or pay the unit fees in the benefit district unless said fees are otherwise deferred.

CITY OF EASTVALE
PLANNING COMMISSION NOTICE OF PUBLIC HEARING
FOR PROJECT NO. PLN25-20086, PLN25-20087, PLN25-20088, PLN25-20089, PLN25-20090, PLN25-20091, PLN25-20092, PLN25-20093, PLN25-20094, AND PLN25-20095 FOR TENTATIVE TRACT MAP NO. 38596 AND MAJOR DEVELOPMENT REVIEWS FOR PHASE C OF THE EASTVALE SQUARE RESIDENTIAL DEVELOPMENT (RISEWELL HOMES)

NOTICE IS HEREBY GIVEN that the City of Eastvale Planning Commission will hold a public hearing on **Wednesday, September 16, 2026**, at 6:00 p.m. at the Eastvale City Hall Council Chambers located at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752, to consider the following projects:

1. **Tentative Tract Map 38596 (PLN25-20086)** a request to subdivide 44.47 acres into 73 buildable lots and 13 lettered lots for condominium, multi-family residential, open space, and public right-of-way purposes, subject to the recommended conditions of approval;

2. **Major Development Review (PLN25-20087)** for the overall site planning, master landscaping, streetscape design, and open space amenities of Phase C of the Risewell Homes master development project, subject to the recommended conditions of approval;

3. **Major Development Review (PLN25-20088)** for the master site planning and architecture of Planning Area 7B (PA 7B) of the Leal Master Plan to accommodate 72 multi-family (i.e. 6-plex) residential units, with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval;

4. **Major Development Review (PLN25-20089)** for the master site planning and architecture of Planning Area 7C (PA 7C) of the Leal Master Plan to accommodate 80 single-family residential units with associated parking areas, landscaping, and open space amenities, subject to recommended conditions of approval;

5. **Major Development Review (PLN25-20090)** for the master site planning and architecture of Planning Area 12A (PA 12A) of the Leal Master Plan to accommodate 72 single-family detached residential units with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval;

6. **Major Development Review (PLN25-20091)** for the master site planning and architecture of Planning Area 12B (PA 12B) of the Leal Master Plan to accommodate 87 single-family residential units, with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval.

7. **Major Development Review (PLN25-20092)** for the master site planning and architecture of Planning Area 12C (PA 12C) of the Leal Master Plan to accommodate 73 single-family detached residential units with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval.

8. **Major Development Review (PLN25-20093)** for the master site planning and architecture of Planning Area 13A (PA 13A) of the Leal Master Plan to accommodate 64 single-family detached residential units with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval.

9. **Major Development Review (PLN25-20094)** for the master site planning and architecture of Planning Area 13B (PA 13B) of the Leal Master Plan to accommodate 32 single-family detached residential units

with associated parking areas, landscaping, and open space amenities, subject to the recommended conditions of approval.

10. **Major Development Review (PLN25-20095)** for the master site planning and architecture of Planning Area 13C (PA 13C) of the Leal Master Plan to accommodate 49 single-family detached residential units with associated parking areas and landscaping, subject to the recommended conditions of approval.

PROJECT DESCRIPTION: The proposed project includes the subdivision of 44.47 acres of land, formally used for agricultural purposes, into 73 buildable lots and 13 lettered lots for condominium, multi-family residential, open space, and public right-of-way purposes. Additionally, Major Development Reviews are requested for the overall site planning, landscaping, and open space amenities of Phase C of the Eastvale Square residential development constructed by Risewell Homes and the master architecture, site planning, associated open space, on-site parking, and landscaping amenities within PA-7B, 7C, 12A, 12B, 12C, 13A, 13B, and 13C of Eastvale Square residential development Phase C.

PROJECT LOCATION: Assessor's Parcel Number: 164-030-052, Leal Master Plan (Planning Areas 7B, 7C, 12A, 12B, 12C, 13A, 13B, & 13C) located north of Limonite Avenue, south of 58th Street, west of Hamner Avenue, and east of Scholar Avenue. The project site is not located on a hazardous materials site listed under Government Code Section 65962.5.

ENVIRONMENTAL: Up to 2,500 residential units and 595,000 square feet of commercial space including a hotel, a civic center (i.e., City Hall, Library, Police Station) and Fire Station were contemplated in the Leal Master Plan Amendment and fully evaluated in the Addendum to the Leal Master Plan PEIR (SCH# 2015031028) certified by the City Council via Resolution No-22-25 on May 11, 2022. Staff has reviewed the environmental analysis in the Addendum to the Leal Master Plan PEIR and believes that it remains valid for the proposed project. The proposed project would not exceed the previously analyzed development in terms of size or intensity of use. Development of the proposed project would remain consistent with the analysis of the Addendum to the Leal Master Plan PEIR and would not require a change to the site's land use designation or zoning. Therefore, staff has determined the project is within the scope of the Leal Master Plan PEIR and Addendum pursuant to CEQA Guidelines Section 15168 and no additional environmental analysis is necessary. Applicable mitigation measures included in the Addendum to the Leal Master Plan PEIR would be required for the development of the proposed project, however a Notice of Determination shall be filed following any action taken on the project.

Any person may submit written comments prior to the public hearing or may appear in person before the Planning Commission to be heard. Written comments may be mailed to the City of Eastvale Planning Division located at 12363 Limonite Avenue, Suite 910, Eastvale, CA 91752 or via email to Allen Lim, at alim@eastvaleca.gov. **For the comments to be presented to the Planning Commission at the meeting, all comments made in writing or via e-mail prior to the public hearing must be received by the City of Eastvale Planning Division no later than Wednesday, September 16, 2026, at 5:00 p.m.** Oral and written comments may be submitted directly to the Planning Commission at the public hearing. If you challenge the project in court, you may be limited to raising only those issues you raised at the public hearing as described in this notice or in written correspondence delivered to the Eastvale Planning Commission prior to or at the public hearing.

If you have any questions on the project, contact Allen Lim at (951) 703-4461 or alim@eastvaleca.gov.
